# **1. Introduction**

The Hybrid Panel Lite is an IP-based multi-functional RF gateway with 4G/LTE or 2G capability, plus flexible hardwired and wireless sensor zone options, providing comprehensive solutions, including remote management, home security, live visual monitoring, home automation, environmental emergency monitoring, and energy management and being designed to bring all-round convenience, comfort and safety.

## **System Feature**

- Ethernet / Cellular connection
- Communication Path: the Hybrid Panel Lite has built-in RF module.

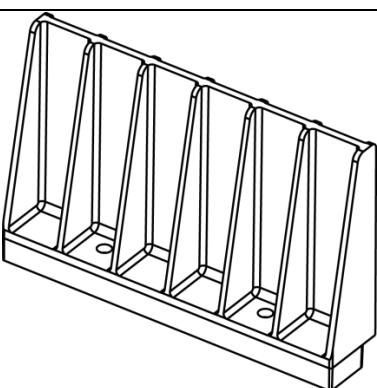

The Hybrid-Panel Series include the following models:

- **Hybrid Panel Lite 2G:** IP/GPRS alarm system with 2G reporting
- **Hybrid Panel Lite 4G:** IP/GPRS alarm system with 4G reporting

## **1.1 What's in the Box**

Your package includes the following items:

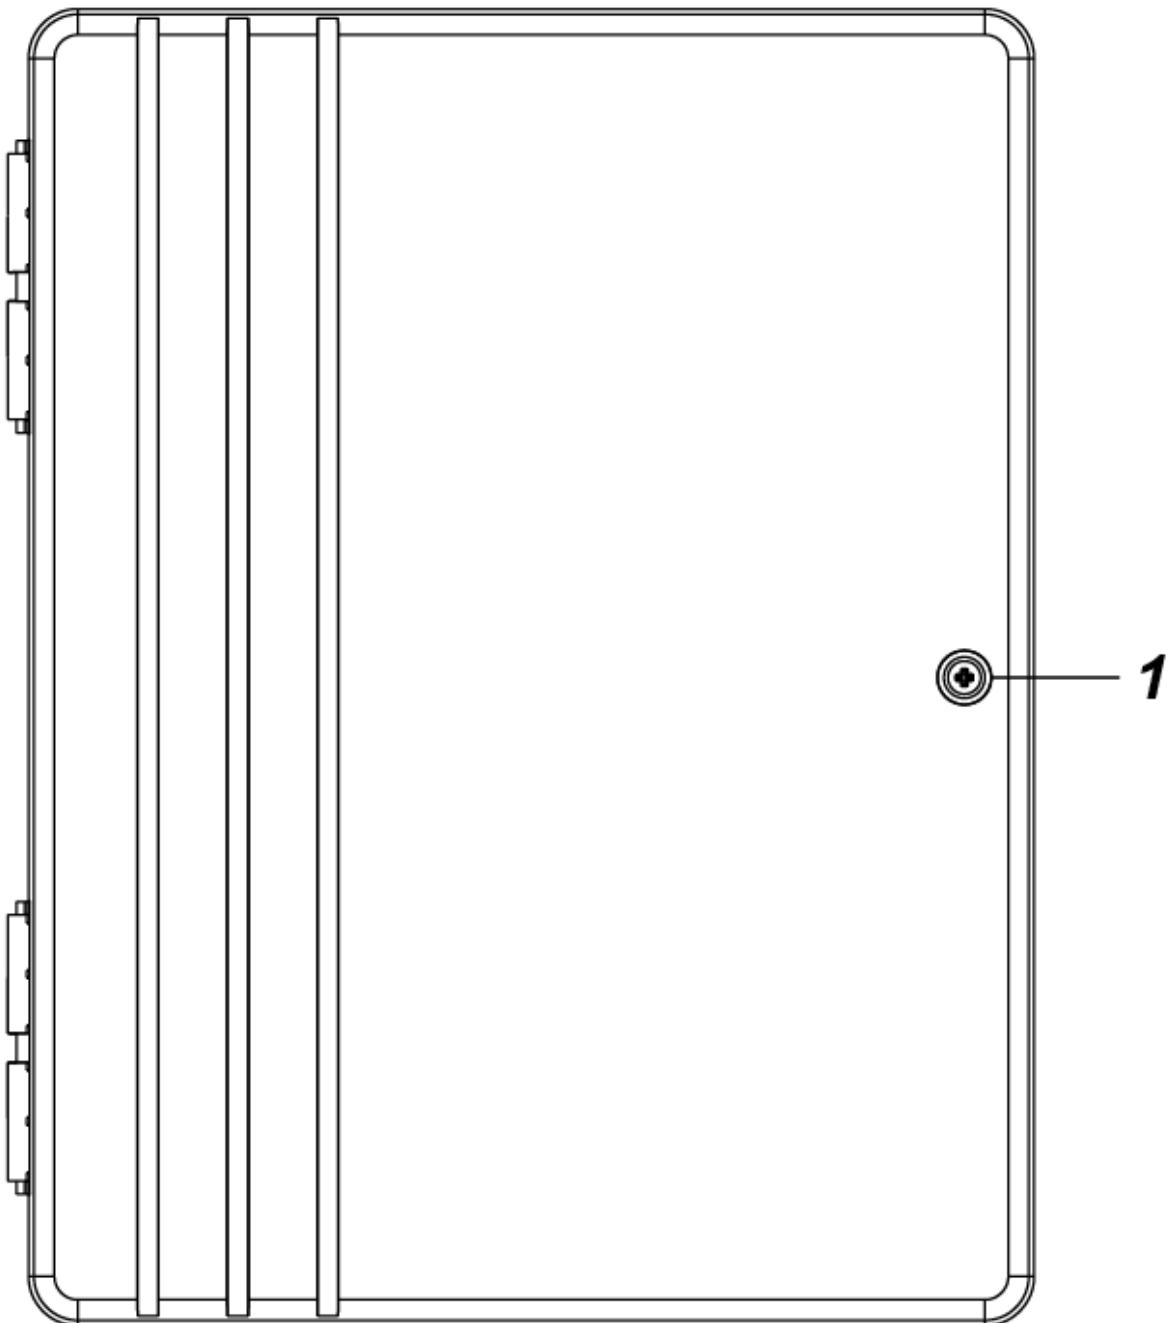

- Control Panel \*1
- Open Frame Power Cord \*1
- Ethernet Cable \*1
- Accessories:

Jumper Connector *2	
U-shaped Grommet *2	
5.6K Resistor (2 resistors for each zone, 16 resistors for 8 zones in total)	
Battery Partition bracket	
Mounting Screw *4, Wall Plug *4, Battery Partition bracket Screw*2	

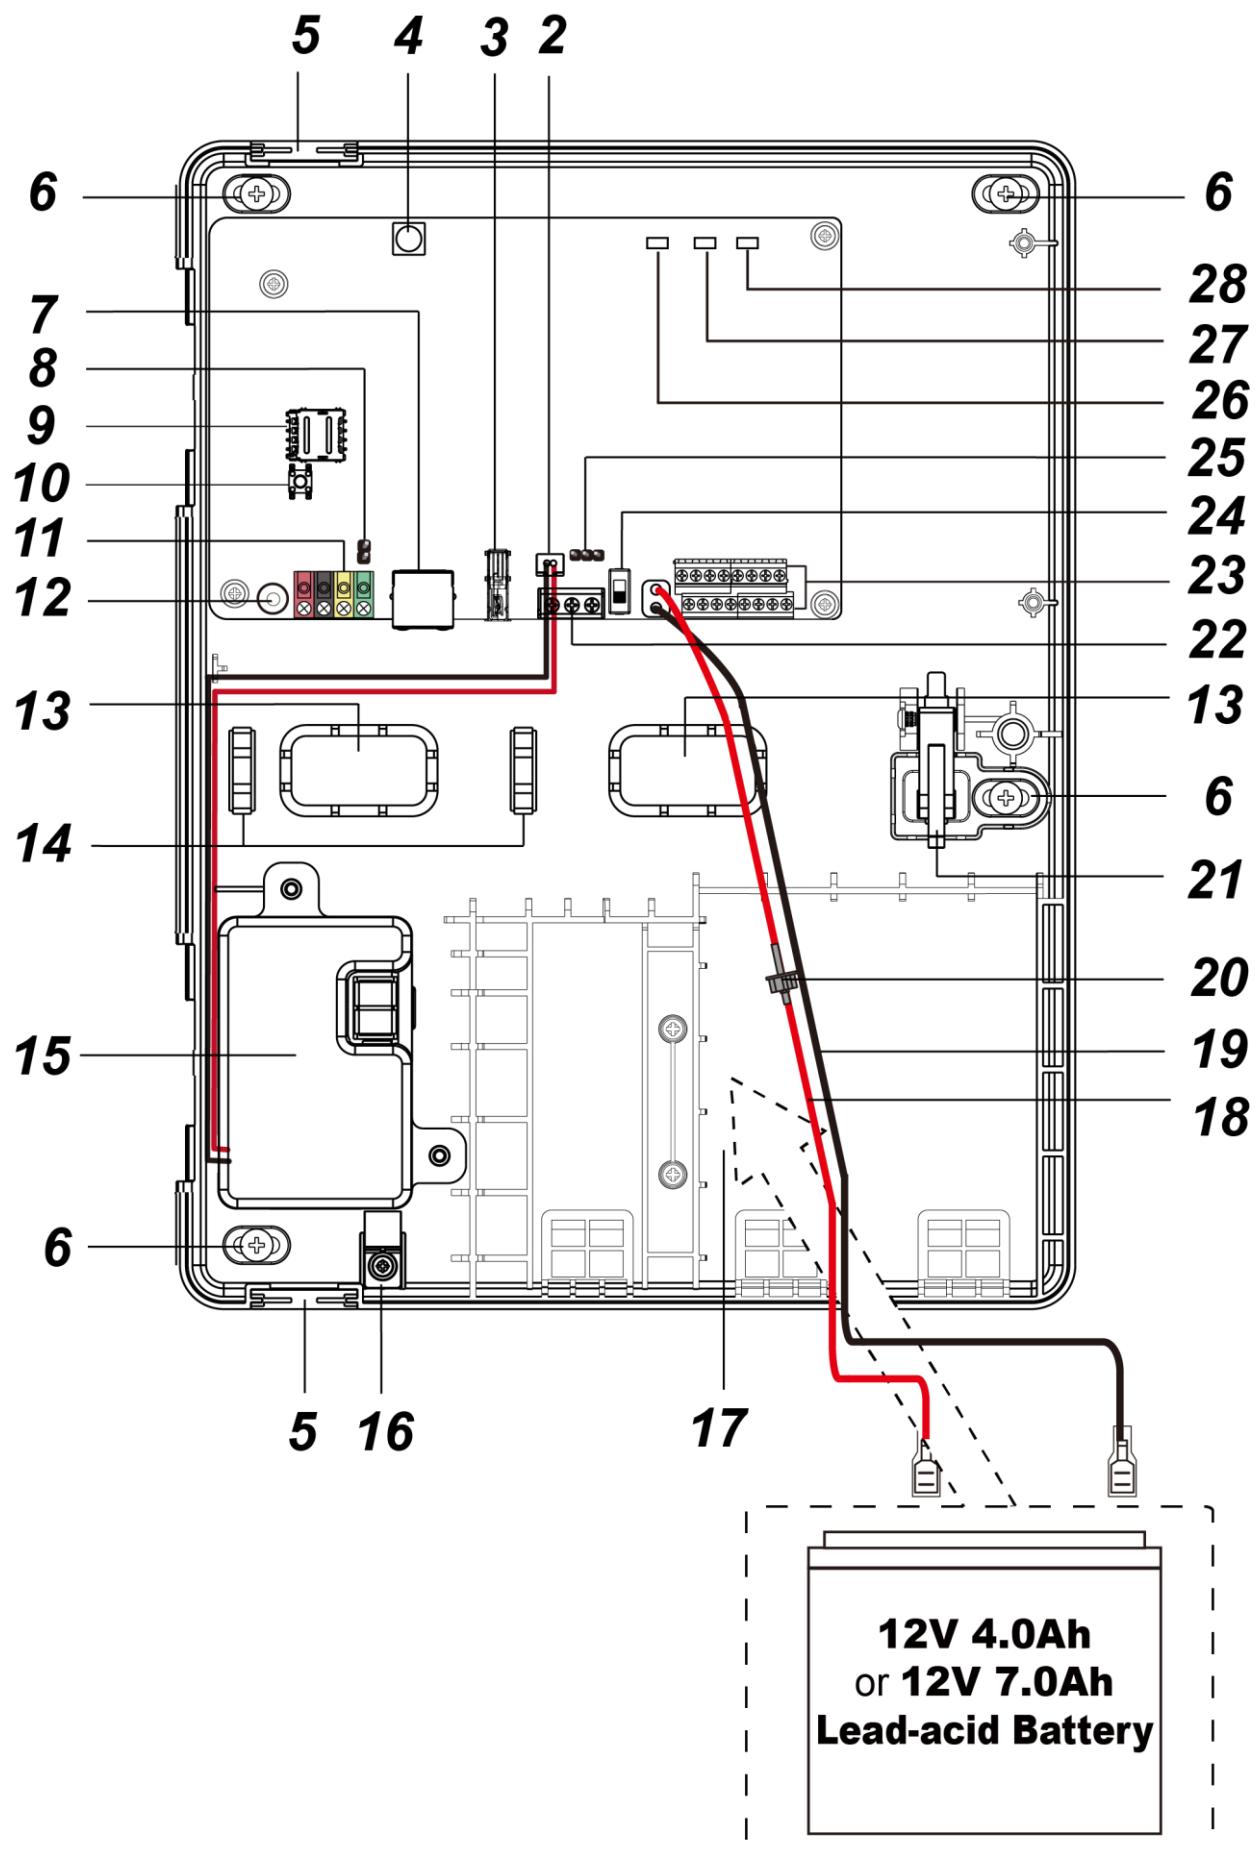

## **2. Panel Information**

### **2.1. Identifying the parts**

**Top Cover (front view)**

**Back Cover (internal view)**

**1 Cover Fixing Screw**

**2 Built-in Power Unit Connector**

**3 USB Port**

When connecting a USB dongle into the port, it is suggested to use a USB extension cable.

**4 2G/4G LTE External Antenna Terminal (SMA Plug)**

**5 Removable Protective Cover \* 2 (at the top and bottom of the back cover)**

Reveal or hide the wiring hole

**6 Mounting Holes \* 4**

**7 Ethernet Port**

**8 J53 Jumper Switch**

J53 Jumper Switch can be served as a terminating resistor, which can be turned to ON when wiring different BUS devices to the panel to enhance connection.

**9 Micro SIM Card Socket (not hot swappable)**

**10 Learn Button**

For local learning or local reset

**11 Pluggable Bus Terminal**

Connect to wired BUS devices.

**12 EGND Terminal**

Please refer to **3.3 Hardware Installation** for detail.

**13 Alternative Hole for Wiring Management \* 2**

**14 Wiring Clip \* 2**

For securing power cables.

**15 Built-in Power Unit**

Input: 100-240VAC

Open Frame built-in power unit is installed. Use the built-in power unit to connect to the mains power.

***☞ Ensure to turn off all power supplies including Built-in Power Unit and SLA Battery before connecting or removing cables or wires.***

**16 Wire Saddle**

**17 Room for SLA Battery**

Room for installing 12V 7Ah or 12V 4Ah Sealed Lead Acid rechargeable battery.

If 12V 4Ah battery is used, please install the Battery Partition Bracket included in the package to hold the battery in place. See **3.2. Mounting** for details.

**18 Embedded Battery Cable (Power) (Red)**

**19 Embedded Battery Cable (GND) (Black)**

## 20 Tube Fuse Holder

### Please note:

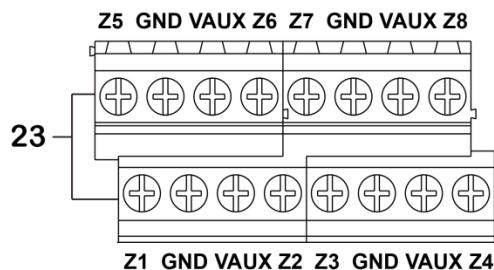

- ☞ **The tube fuse is pre-installed onto the battery cable; it is recommended not to change or replace the cable on your own to avoid possible hazards.**

## 21 Dual Wall-mount & Front Cover Tamper

## 22 PGM Port

To be used as a voltage output port or a dry contact relay output depending on J24 jumper settings.

## 23 Zone Terminal & Auxiliary Voltage Output Terminal & GND Terminal

## 24 Battery Switch

Switch to “ON” for the battery to be charged when AC power is connected and serve as a backup power source when AC power is missing.

## 25 J24 Jumper Switch

The jumper is used for PGM Port setting. Please refer to **3.3 Hardware Installation** for details.

## 26 LED 1 - Area 1 (Green/Red)

- ☞ Full Arm mode - Red lighting up
- ☞ Home/1/2/3 mode - Red flashing
- ☞ Learning mode - Green lighting up
- ☞ Walk Test mode - Green flashing

## 27 LED 2 - Area 2 (Green/Red)

- ☞ Full Arm mode - Red lighting up
- ☞ Home/1/2/3 mode - Red flashing
- ☞ Learning mode - Green lighting up
- ☞ Walk Test mode - Green flashing

## 28 LED 3 - Status (Orange/Red)

- ☞ System Fault - Orange lighting up
- ☞ Alarm Trigger – Red flashing
- ☞ Arm in Memory – Red lighting up

## 2.2. Power Supply

### Built-in Power Unit

- You can use the built-in power unit to connect to the mains power. AC module built-in power unit or Open Frame built-in power unit is installed. Please refer to ***Using the built-in Power Unit*** in ***3.3 Hardware Installation*** for more details.

#### Please note:

- ☞ ***Ensure to turn off all power supplies including Built-in Power Unit and SLA Battery before connecting or removing cables or wires.***

### Rechargeable Battery

- A rechargeable battery (12V 7Ah or 12V 4Ah SLA battery) can be installed inside the Control Panel to serve as a backup in case of a power failure.
- During normal operation, AC power is used to supply power to the Control Panel and at the same time recharge the battery.
- If the battery switch is set as **OFF**, the battery will not be charged when AC power is connected and nor will it serve as a backup power source when AC power is missing. You need to switch the battery to **ON** for it to be charged when AC power is connected and serve as a backup power source when AC power is missing.

### Power Output

- The panel supports up to a maximum total of 13.5V/1.5A (typical) for the current derived from VDD auxiliary voltage output terminals.
- The total current provided by Hybrid Panel Lite for hardwired devices, BUS devices, wired keypad and expansion modules should not exceed 1.5A. Otherwise, additional power is required.

#### Please note:

- ☞ ***If the total current exceeds 1.5A, components of Hybrid Panel Lite could be damaged.***

### **3. Getting Started**

Read this section of the manual to learn how to set up your Control Panel.

#### **3.1. Selecting Mounting Location**

The Control Panel is designed to be wall mounted and protected against unauthorized case opening or removal from its mounting surface, follow guidelines below when planning installation location:

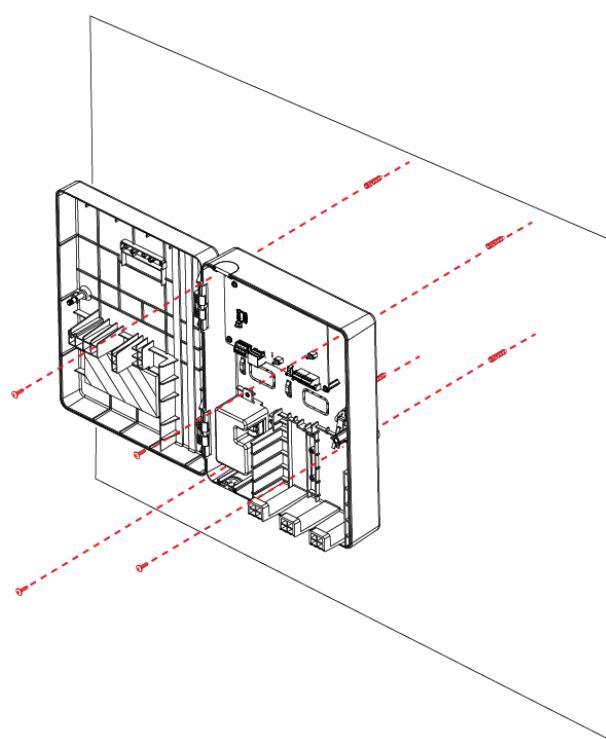

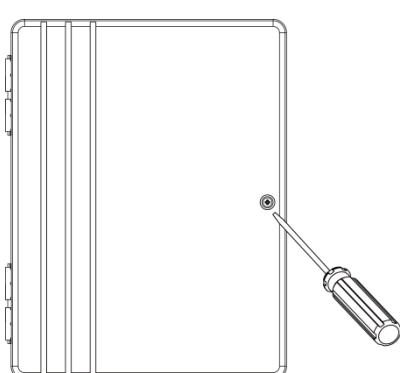

- The Control Panel requires the mains power and Ethernet connection.
- If a Cellular Module is used, ensure that there is good cellular coverage (Advisable to have a level of at least 4 out of 5).
- The Control Panel needs to have access to the routing of cables for the system to connect with wired devices.
- A central location between all the devices is often the best place, making wiring to expanders or devices easier, and preferably a place that is hidden from outside view.
- Avoid mounting the Control Panel in a damp location, close to a heat source, or near large metal objects, which may affect wireless radio strength.
- The Control Panel should be protected by sensors so that no intruder can reach the Control Panel without first activating a sensor.

#### **3.2. Mounting**

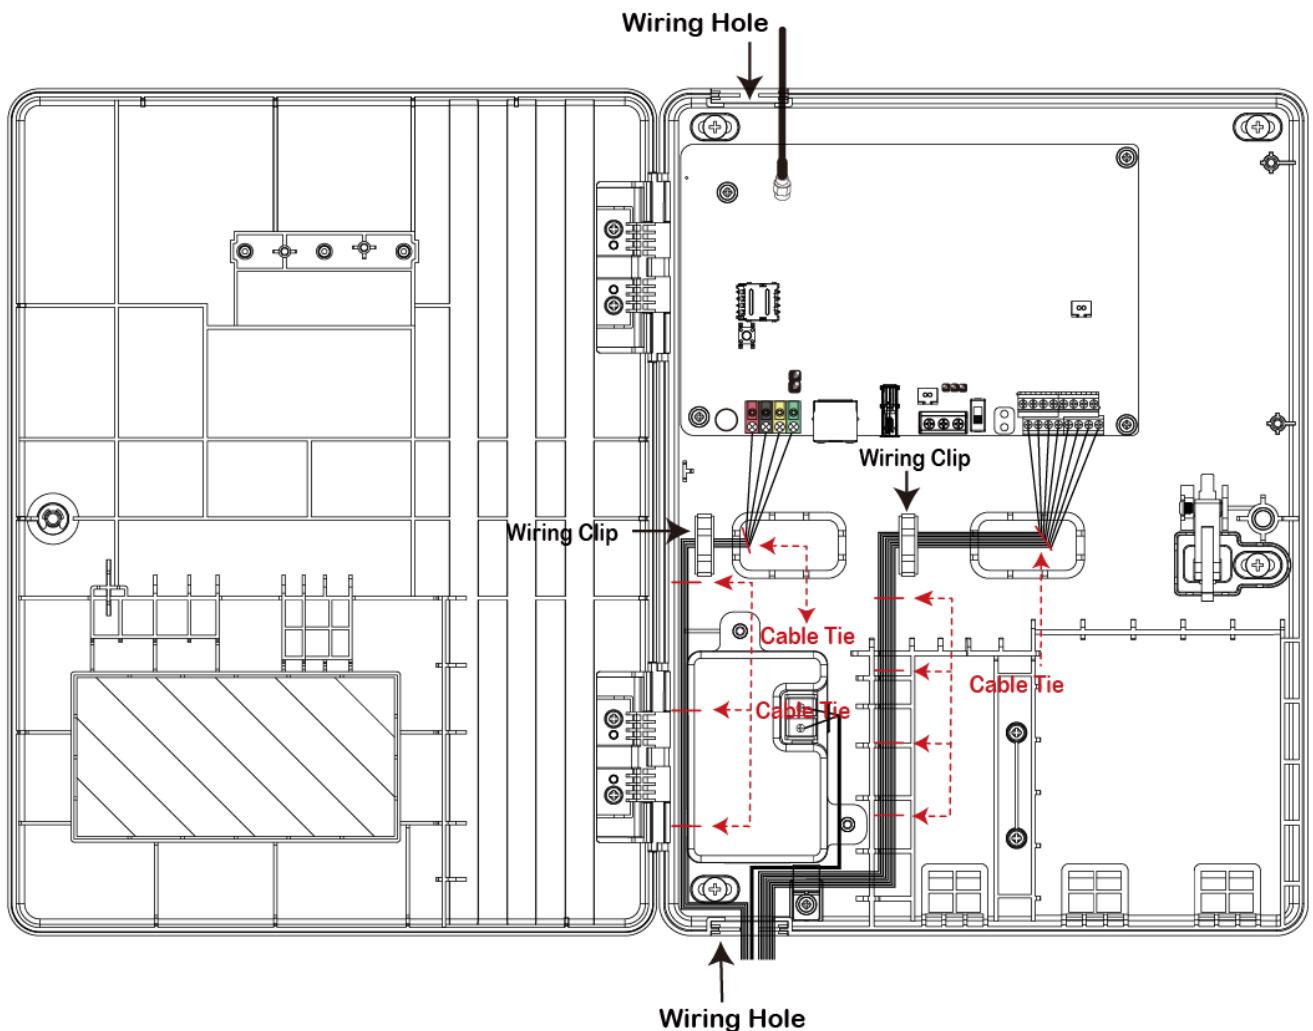

**Before installation or any maintenance work, make sure the power supply has been disconnected, and the battery switch has been slid to OFF position.**

**Step 1.** Use a flat-head screwdriver to loosen the cover fixing screw to open the top cover.

**Step 2.** Use the 4 mounting holes as a template to mark and drill holes appropriately.

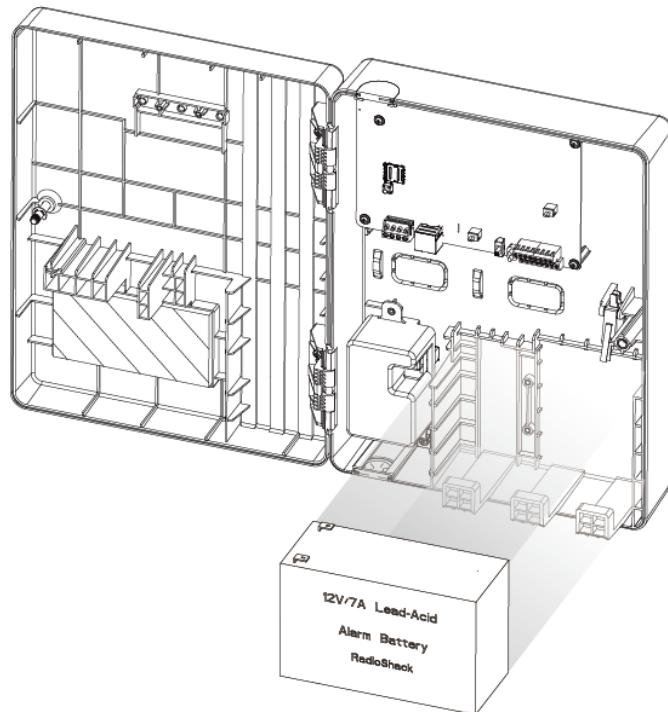

- Step 3.** Use the provided wall plugs for plaster/brick installation. Make sure the wall plugs are flush with the wall.
- Step 4.** Screw the Control Panel onto the wall. Make sure the Tamper Switch is fully depressed against the wall
- Step 5.** Complete wiring following the instructions in later section **3.3. Hardware Installation.**
- Step 6.** Arrange all wires along the wire clips and then route the wires to the wiring hole on bottom. For external antenna, route the wire to the wiring hole on top.
- Use cable ties (not included ) to thread through the wire clips and secure the wires. Use the U-shaped grommets around the cable holes to manage wires.

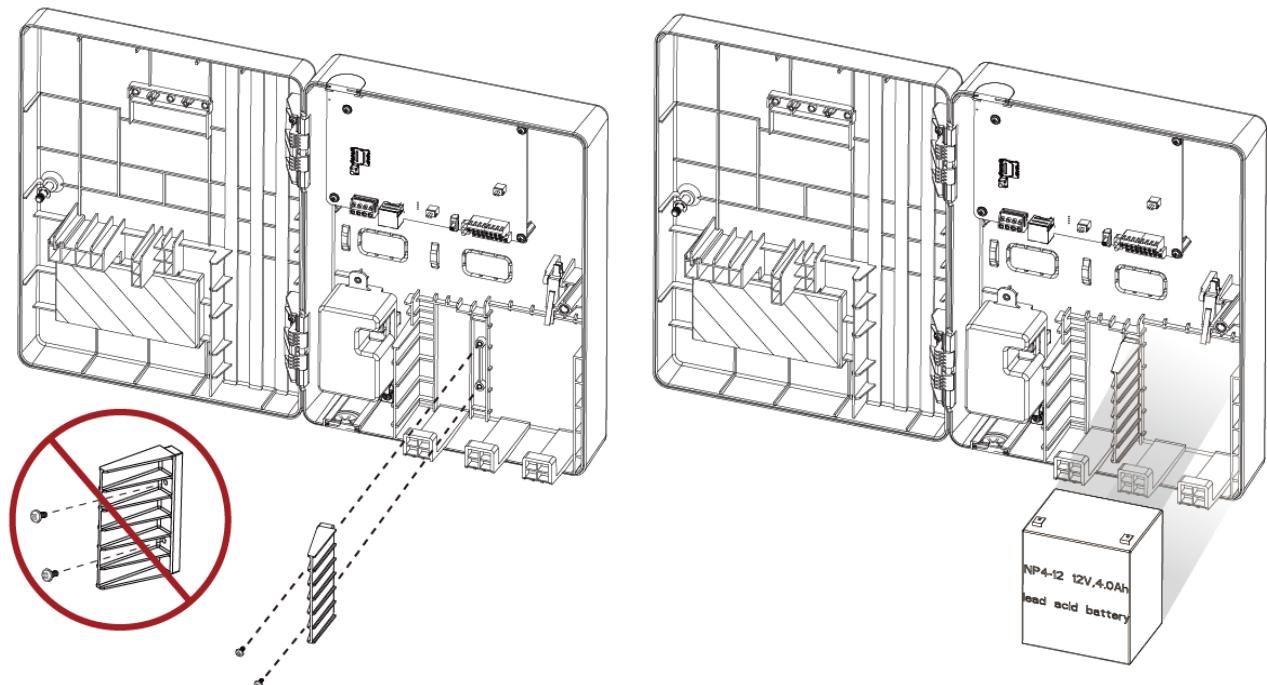

- Step 7.** Attach the battery to the Hybrid Panel Lite.

Battery options include one 12V/7Ah SLA battery or one 12V/4Ah SLA battery. Please see figures below.

**For 12V 7Ah Battery**, you can attach it directly to the Panel Casing.

**For 12V 4Ah Battery**, first install the battery partition bracket, and then attach the battery to the Panel casing.

**Step 8.** Close the cover and tighten the cover fixing screw.

### 3.3. Hardware Installation

**CAUTION: Before servicing, make sure the AC power has been disconnected, and the battery switch has been slid to OFF position.**

- Wiring of the Hybrid Panel Lite should only be performed by certified technician with proper knowledge and training in electric equipment.
- Before installation or any maintenance work, make sure the power supply has been disconnected, and the battery switch has been slid to OFF position.
- Do not connect the devices to loads exceeding supported load current.
- Do not connect the battery or the built-in power unit until all wiring is complete.
- The control panel enclosure must be secured to the wall before operation.
- Internal wiring must be routed in a manner that **prevents**:
  - Wiring over circuit boards
  - Excessive strain on wire and on terminal connections
  - Loosening of terminal connections
  - Damage of conductor insulation
- Incorrect connections will result in failure or improper operation. Inspect wiring and ensure proper connections before applying power.

**Step 1.** For configuration and operation of the Control Panel via Ethernet, connect an Ethernet cable to RJ-45 port.

**Step 2. Insert SIM card (Optional):** Slide the metal frame of the SIM card socket leftwards (**FIG. 1**) and flip it over (**FIG. 2**); then put an SIM card onto the socket (**FIG. 3**).

When putting the SIM card, make sure the metal side of the card faces DOWN. After the SIM card is put in place, flip the metal frame back and slide it rightwards to lock it. Note that the notch of the SIM card should be in the lower left corner as in Figure 3.

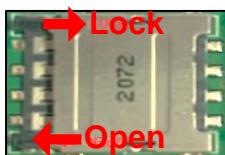

FIG. 1

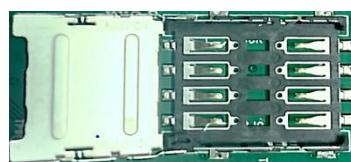

FIG. 2

FIG. 3

**<NOTE>**

- ☞ Before inserting the SIM card, please make sure the pin code is deactivated and SMS messages are removed first.
- ☞ Inserting or Remove the SIM Card when the Panel is powered off.
- ☞ Make sure to insert a SIM card with data plan.

**Step 3.** Complete wiring for Zone 1-8 terminals, GND terminals, AUX power terminals, and BUS terminal. (Please see the following sections for details.)

**Step 4.** Connect the external antenna to the antenna terminal on the panel.

**<NOTE>**

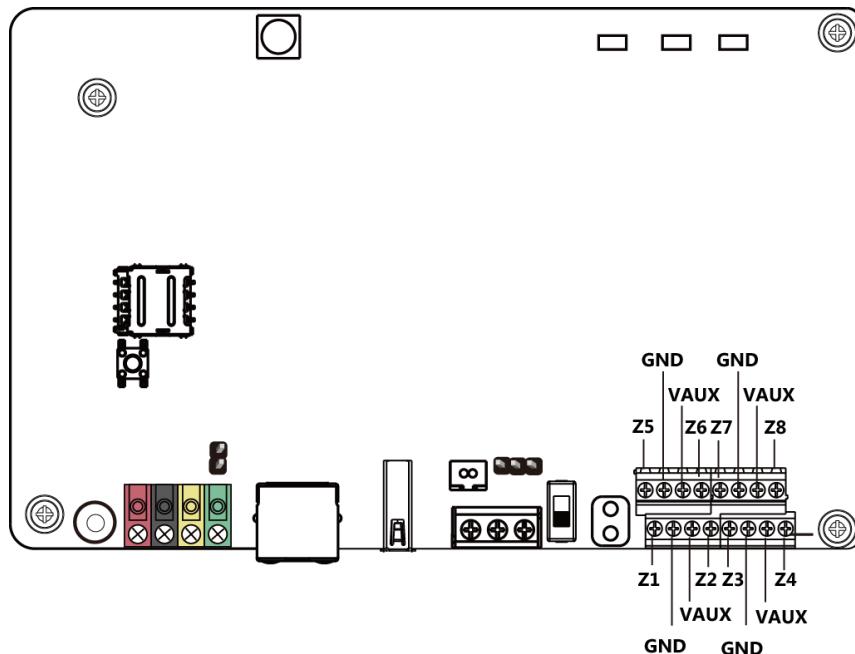

- ☞ Make sure to connect or remove the antenna when the Panel is powered off.
- ☞ Do not place the antenna close to metallic materials.

**Step 5.** Connect the battery to the PCB board. See **Battery Installation** in the following section for more details.

**Step 6.** Connect to the mains power using the built-in power unit.

**Step 7.** Slide the battery switch to ON position.

## Zone Wiring (Zone 1 - 8)

- The 8 zones can be wired by supervising NC (normally close) or NO (normally open) devices, e.g. PIR sensor, door contact, smoke detector, water sensor, fire sensor, CO sensor, gas detector, heat detector, and glass break detector, etc.
- Wire gauge: Minimum 22 AWG, maximum 19 AWG. Do not use shielded wire.
- Total wiring length limit for connected NO/NC devices:
  - Max. 3000 ft / 914 m @ AWG-22
  - Max. 4900 ft / 1493 m @ AWG-20
  - Max. 6200 ft / 1889 m @ AWG-19

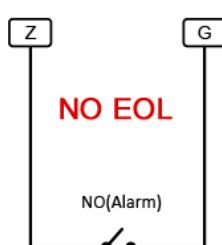

<Note>The wiring length is calculated based on maximum wiring resistance of  $100\Omega$  ( $50\Omega$  multiplied by 2 because the wire is round-tripped).
- The hardwired zones support Single-End-of-Line (SEOL), Double-End-of-Line (DEOL) loop configuration, with selectable resistor values of  $1K\Omega$ ,  $2.2K\Omega$ ,  $3.74K\Omega$ ,  $4.7K\Omega$ ,  $5.6K\Omega$ ,  $6.8K\Omega$ ,  $8.2K\Omega$ ,  $10K\Omega$  ohms.
- Triple end-of-line (TEOL) loop can be configured in different combinations:  $4.7K\Omega$ ,  $6.8K\Omega$ ,  $12K\Omega$  (resistor value selection:  $6.8K$ ),  $4.7K\Omega/5.6K\Omega$ ,  $4.7K\Omega$ ,  $2.2K\Omega/3K\Omega$  (resistor value selection:  $4.7K$ ), or  $4.7K\Omega/5.6K\Omega$ ,  $5.6K\Omega$ ,  $2.2K\Omega/3K\Omega$  (resistor value selection:  $5.6K$ ).
- For an NO loop, please have an EOL resistor in parallel (across) the loop.
- For an NC loop, please have an EOL resistor in series with the loop.
- If a zone wiring method is changed, be sure to turn the system power off and back on again to avoid triggering the alarm.

Please refer to the following diagrams of loop 1 to 10 for wiring examples.

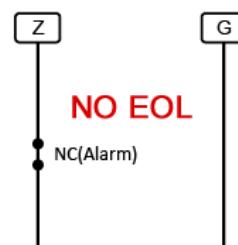

### NO/NC Wiring

The panel can detect alarm for corresponding NO or NC devices via the open, secure or shorted circuits. <Note> There is no EOL resistor in loop 1 and loop 2

1.

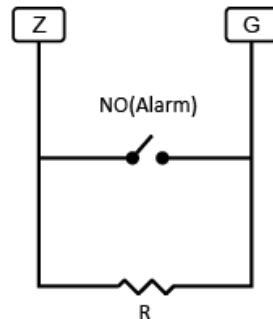

2.

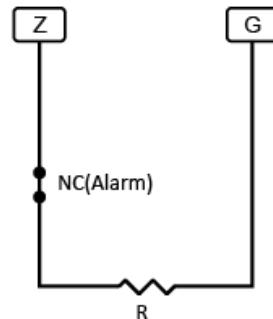

### **Single-End-of-Line (SEOL) Resistor Wiring**

The single-end-of-line (SEOL) resistor shall be installed near the wired device at the end of a zone loop to supervise the wiring conditions for NO and NC devices, so the panel can detect alarm and tamper for corresponding devices via the open, secure or shorted circuits.

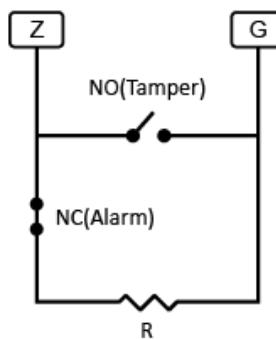

3.

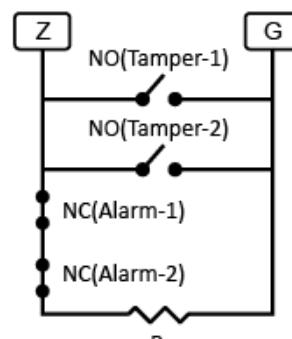

4.

5.

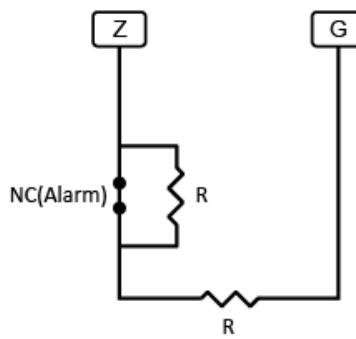

6.

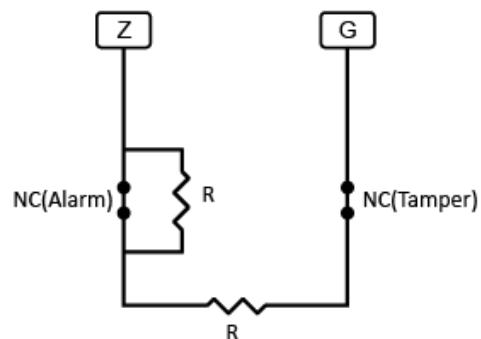

### **Double-End-of-Line (DEOL) Resistor Wiring**

The double-end-of-line (DEOL) resistor shall be installed near the wired device at the end of a zone loop to supervise the wiring conditions for NC devices, so the panel can detect alarm and tamper for corresponding devices via the open, secure or shorted circuits.

7.

8.

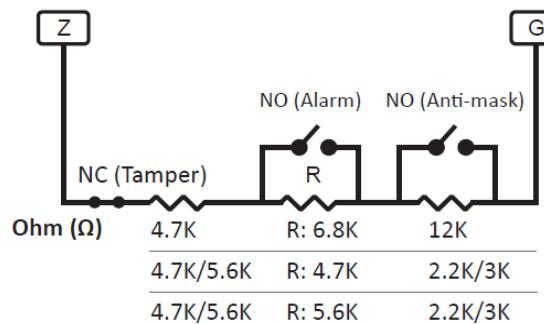

### **Triple-End-of-Line (TEOL) Resistor Wiring**

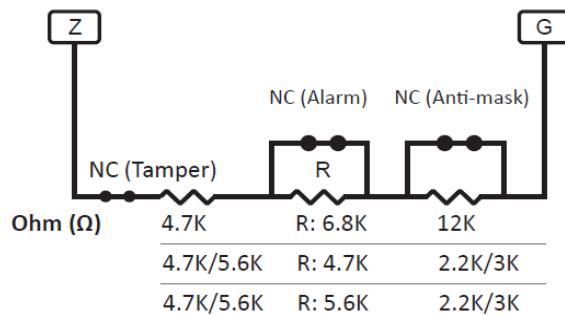

The triple-end-of-line (TEOL) resistor shall be installed near the wired device at the end of a zone loop to supervise the wiring conditions for NC or NO devices, so the panel can detect alarm, tamper and anti-masking for corresponding devices via the open, secure or shorted circuits.

☞ The unit for values in the following is in ohms ( $\Omega$ ).

9.

10.

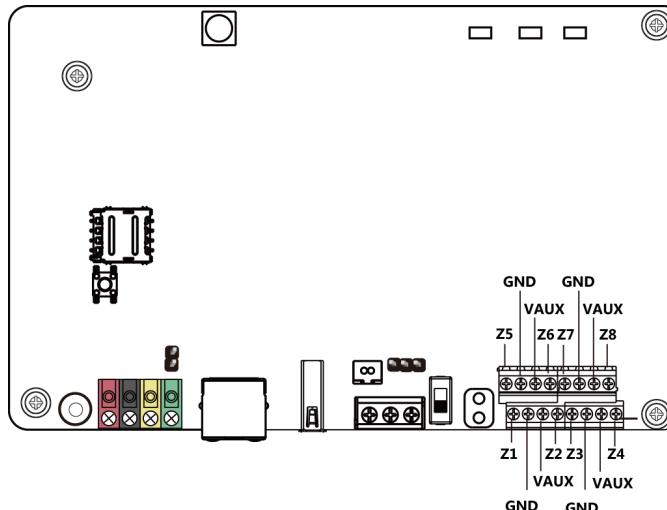

Z: Wired Zone Input

G: GND

NO: Normal Open Contact

NC: Normal Close Contact

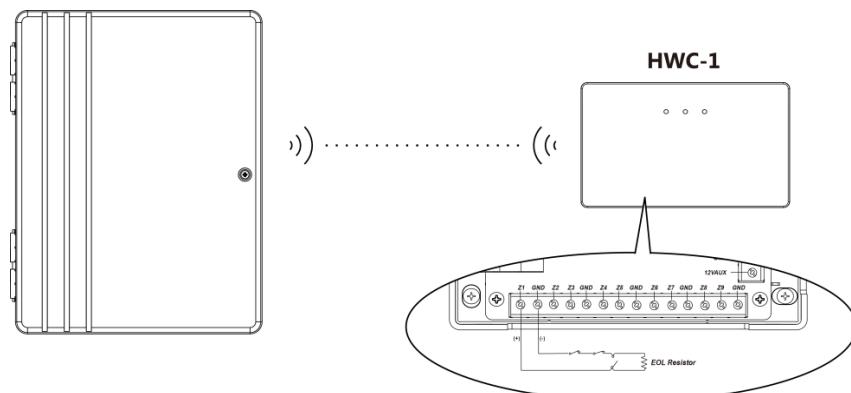

## AUX Power Wiring

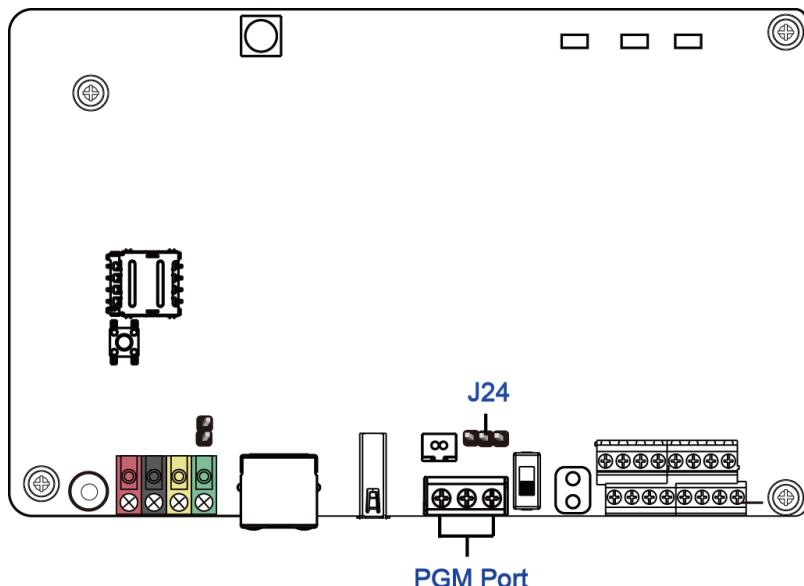

- The Control Panel can provide a maximum total of **1.5A** current for hardwired zones, auxiliary output, BUS devices, wired keypad, expansion modules, and PGM port.
- Min/Max operating voltages for devices/detectors is 10 VDC -14VDC.
- Please note that the total current should **not exceed 1.5A**, otherwise, an additional power supply is required.

## Wired Zone Expansion

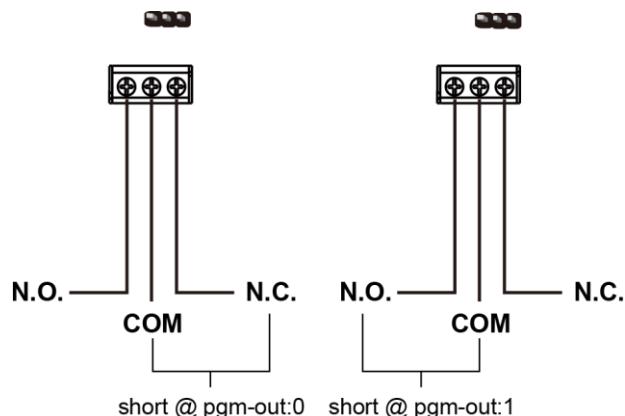

- Hybrid Panel Lite Security Alarm System is compatible with HWC-1 Wireless Converter. One HWC-1 can add 9 wired zones to the Control Panel.

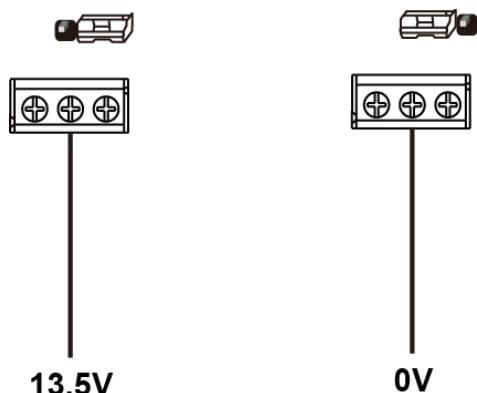

## PGM Wiring

- The output of PGM is 13.5V with a maximum current of 500mA. The total current derived from hardwired zones, auxiliary output, BUS devices, wired keypad, expansion modules, and PGM port should not exceed **1.5A**.
- Please be sure to assess the specifications of the connected devices to deduce the appropriate wiring for the PGM connection.
- The PGM port can be a voltage output port or a dry contact relay output depending on J24 jumper settings.
- When J24 Jumper Switch is disconnected, PGM port will operate as a dry contact relay output.

- When the J24 jumper link is inserted connecting the 1<sup>st</sup> and 2<sup>nd</sup> pins (from the right), the PGM port will provide 13.5V output.
- When the J24 jumper link is inserted connecting the 2<sup>nd</sup> and 3<sup>rd</sup> pins (from the right), the PGM port will provide 0V output.

## Connecting Keypads / Wired Security Devices / Expansion Modules via the data BUS

The keypads, security devices, and expansion modules compatible with Hybrid Panel can be connected in series via the data BUS.

To assist with cable connections, the terminal blocks on each system module are color-coded for easy identification.

### Terminal block color codes:

Red	VDD
Black	GND
Yellow	485A
Green	485B

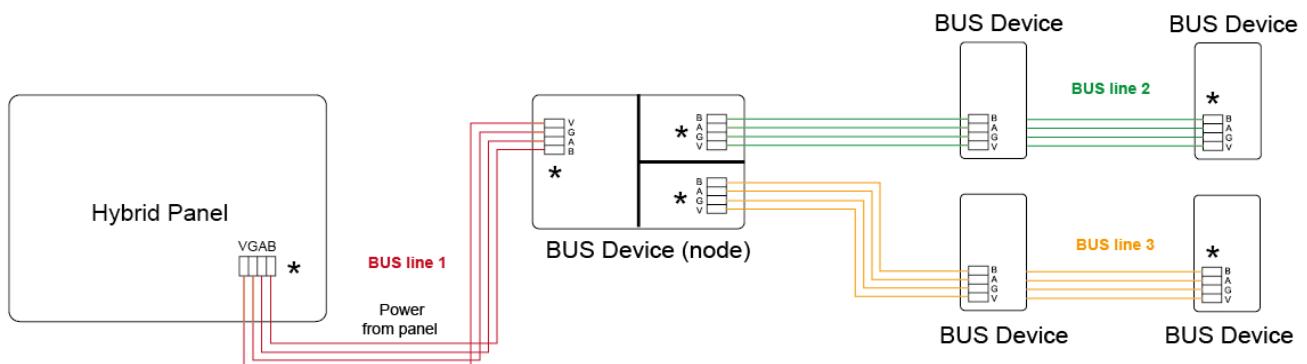

#### Note:

- ☞ **For KPT-35-COMBO and KPT-35(N)-BUS, the terminal blocks are marked as V, G, A, B instead of color-coded.**

### Wiring Guideline

- The Hybrid Panel is the first device on the data BUS. Ensure the Control Panel's J53 Jumper Switch and the furthest BUS device's Jumper Switch are set to ON to serve as a terminating resistor.
  - ☞ Be sure to only enable the aforementioned 2 jumper switches and do not set the jumper switches to ON for any other BUS devices in between.
- The total wiring length limit is a maximum of 3000 ft / 914 m.
  - ☞ Depending on wired device's power consumption, PWB-1-BUS (auxiliary power supply module), or AMP-1-BUS (Range Extender), or ISL-1-BUS (Isolated Range Extender) might be needed.
- The total number of BUS devices (refer to as "nodes"; the Hybrid Panel is counted as one node) on each BUS line must be within 32 or less. Otherwise, BUS signal abnormalities may occur. Be noted that a maximum of 128 BUS devices (including Hybrid Panel and other nodes) can be connected to the panel.
- In the example below, there are a total of 3 BUS lines/segment: **BUS line 1** contains 2 nodes (Hybrid Panel and ISL-BUS), **BUS line 2** contains 3 nodes (ISL-BUS and 2 BUS devices), **BUS line 3** has 3 nodes (ISL-BUS and 2 BUS devices).

- Out of the 128 BUS devices mentioned above, a maximum of 4 keypads can be connected.
- The total number of zone expansion modules, relay expansion modules, wired keypads, and other BUS devices depends on wired device's power consumption. PWB-1-BUS (power bank) may be needed.

#### Note:

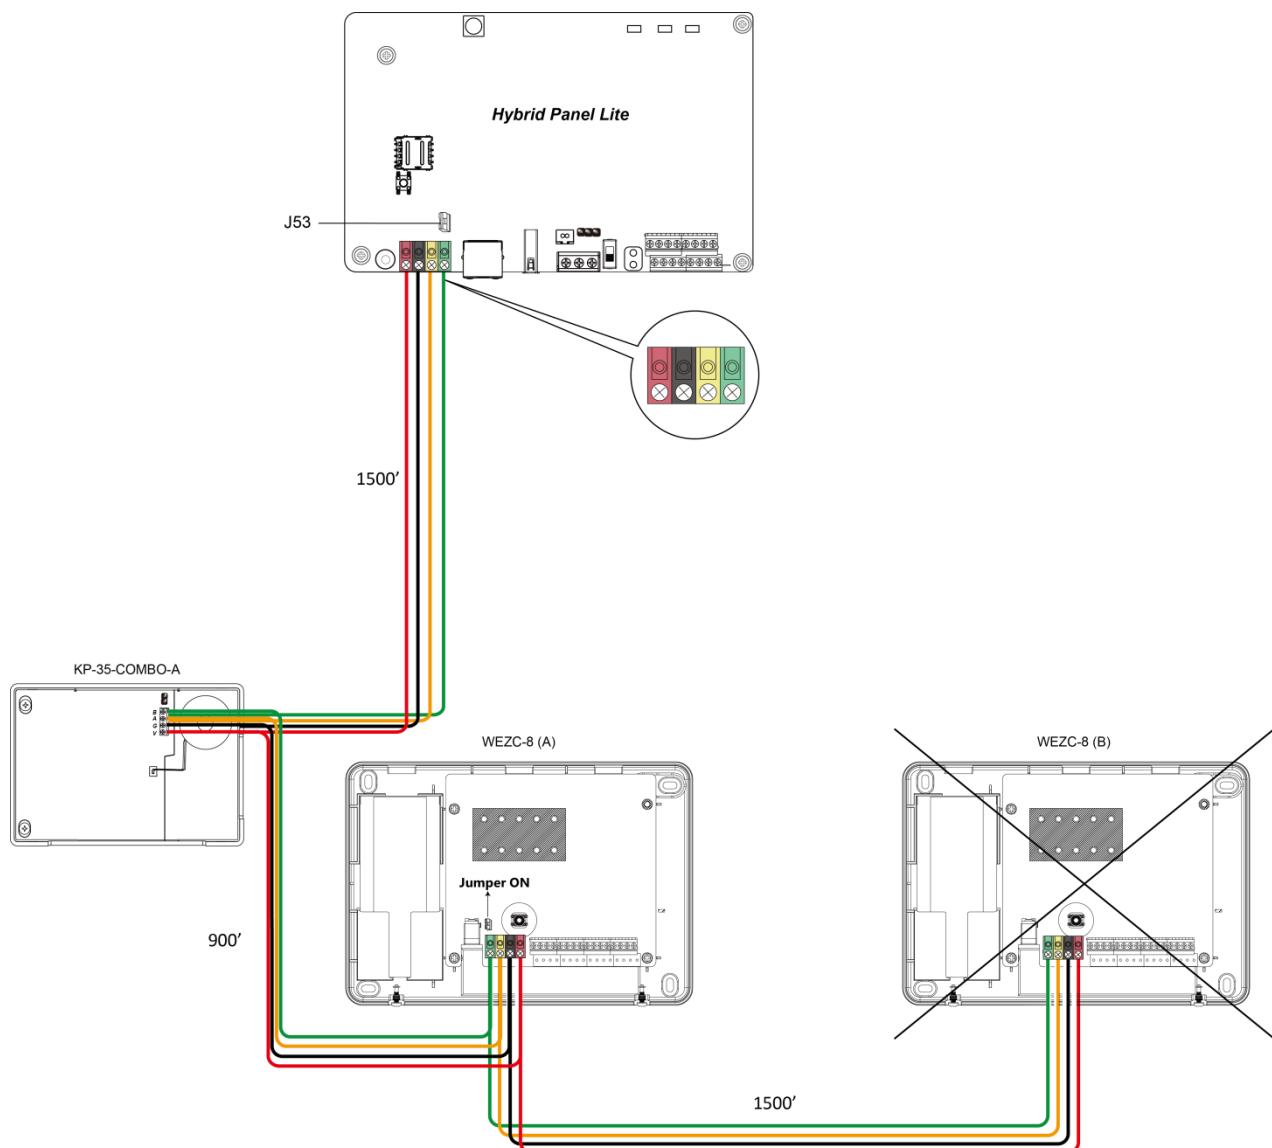

- ☞ **Please note that if you connect all the BUS devices first, then connect them all to the Control Panel to start the learning process, the maximum number of**

**connected BUS devices should not exceed 20.**

- ☞ **If you connect more than 20 devices, the system may not operate smoothly and could cause errors on the panel programming webpage. It is recommended to connect and learn the devices one by one to ensure optimal system operation.**

### **Wiring Example**

- KPT-35-COMBO-A is wired correctly as it is within 1500' / 456m of the panel, in wire distance.
- WEZC-8 (A) is wired correctly as it is within 2400' / 730m of the panel, in wire distance. Since it has the furthest distance from the Control Panel, ensure its jumper switch is set to ON to serve as a terminating resistor before tightening the cover fixing screw.
- WEZC-8 (B) is NOT wired correctly as it is farther than 3900' / 1185m from the panel, which makes it exceed the total length of wiring of 3000 feet.
- Ensure the furthest keypad or expansion module's Jumper Switch and Control Panel's J53 Jumper Switch are set to ON to serve as a terminating resistor.

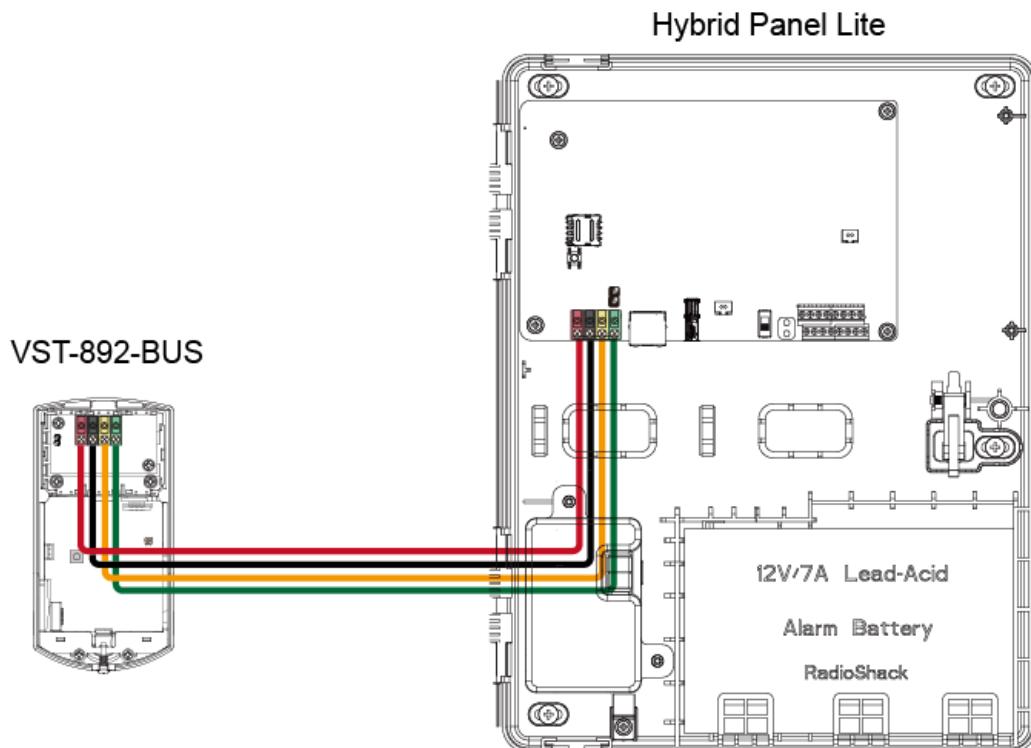

## **BUS Power Supply Management**

- When using the Hybrid Panel Lite to connect multiple external devices, it is important to ensure that the power supply is adequate for connected devices.
- Hybrid Panel Lite can provide a maximum total of 13.5V/1.5A power supply to the connected BUS devices or expansion modules.
- Expansion boards WEZC-8B and WEPC-1B support backup battery, and they can be employed to use external power supply if power supply from the Panel is not enough.  
When connecting an expansion board with external power supply to BUS, please bypass the red VDD terminal. Use the provided Wago 221 Splicing Connector to connect the VDD terminal on the Control Panel to the next BUS device that is powered by Hybrid Panel Lite.
- Alternatively, you can use the PWB-1-BUS (Auxiliary Power Supply Module) in the data BUS system to provide power to connected BUS devices. When connecting the PWB-1-BUS to the Hybrid Panel Lite, only connect the three terminals (GND, 485A, 485B). When connecting the PWB-1-BUS to devices that are powered by the power bank, connect all four terminals (VDD, GND, 485A, 485B).

## **Bus Power Supply Connection Examples**

BUS devices can be connected in different combinations of devices, and be powered by different power sources. Here are three of the main possible connection methods with different device combination.

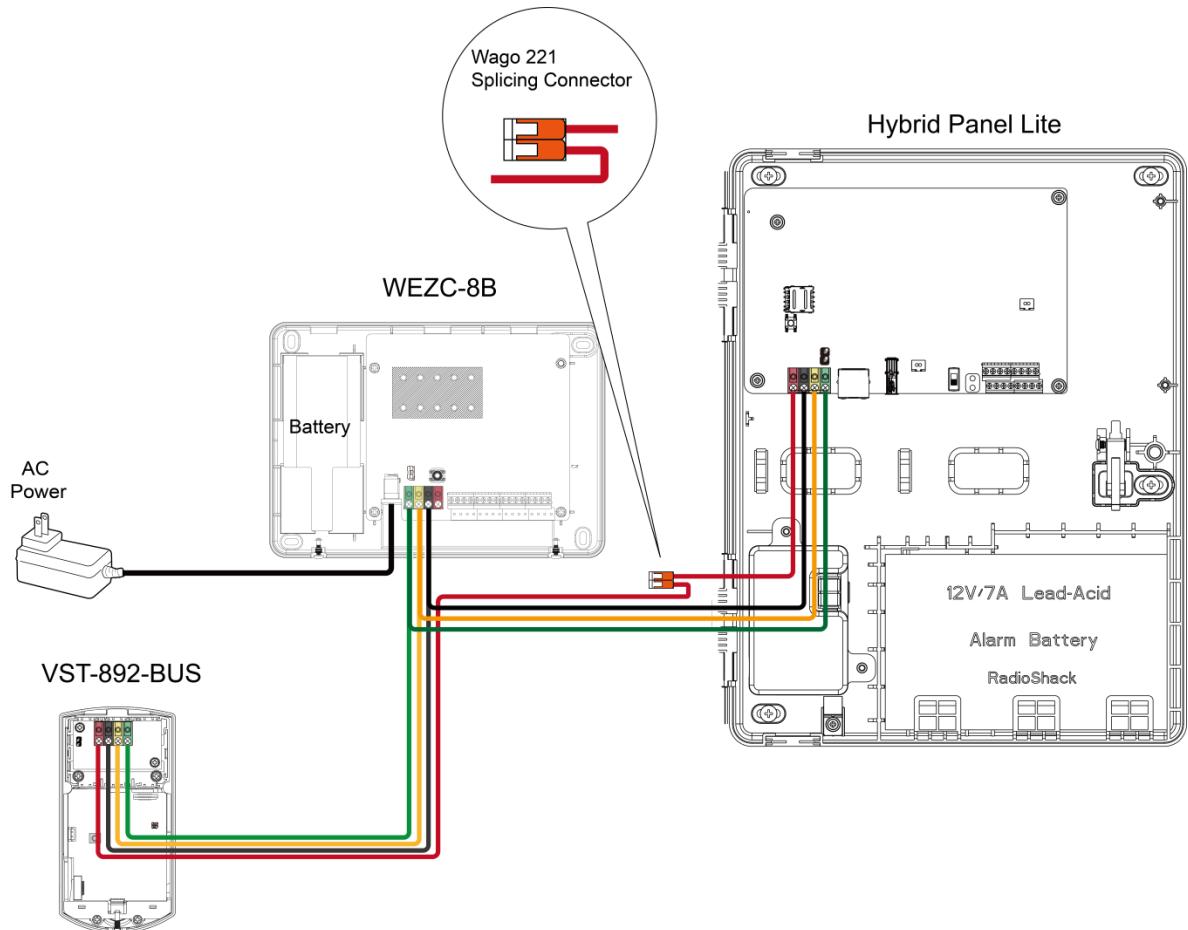

- **Example 1:** Power supply from the Control Panel to a BUS device (VST-892-BUS):

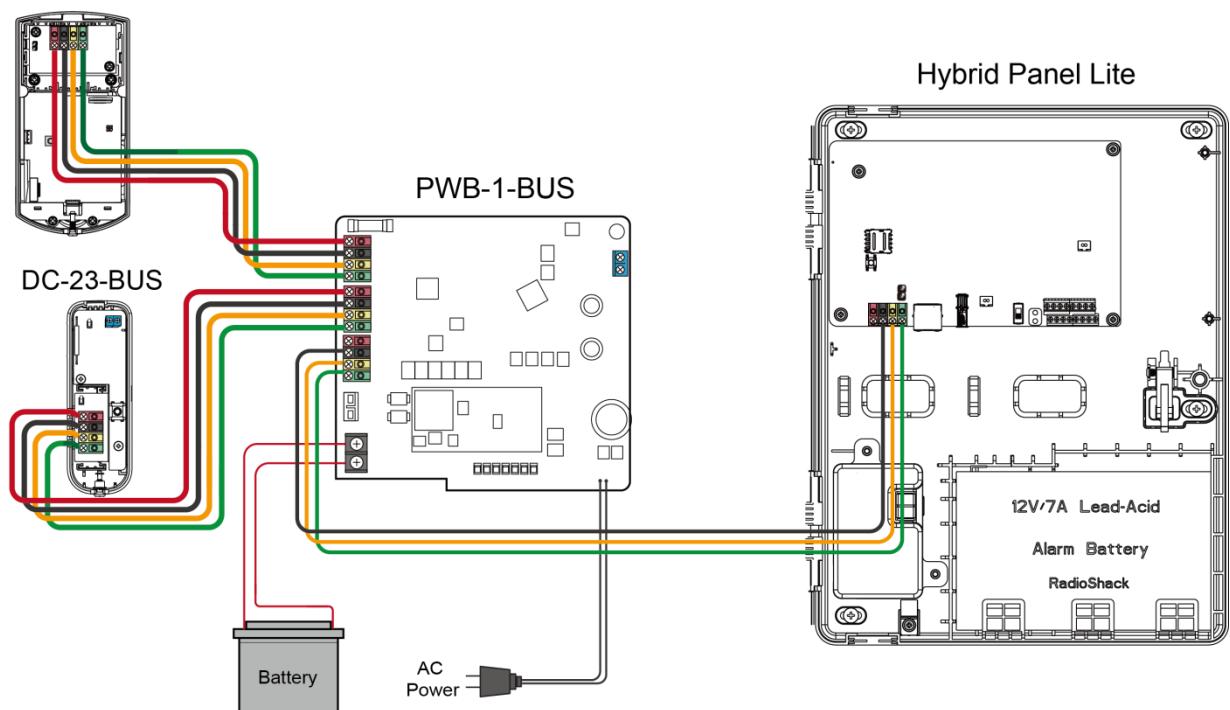

- **Example 2:** Power supply from the Control Panel to BUS device (VST-892-BUS), and Expansion Board (WEZC-8B) receives power from external power source:

**Note:**

- ☞ **Be sure to bypass the red VDD terminal on the Control Panel using the provided Wago 221 Splicing Connector. Connect the VDD terminal to the next BUS device (VST-892-BUS as example) that is powered by Hybrid Panel Lite.**

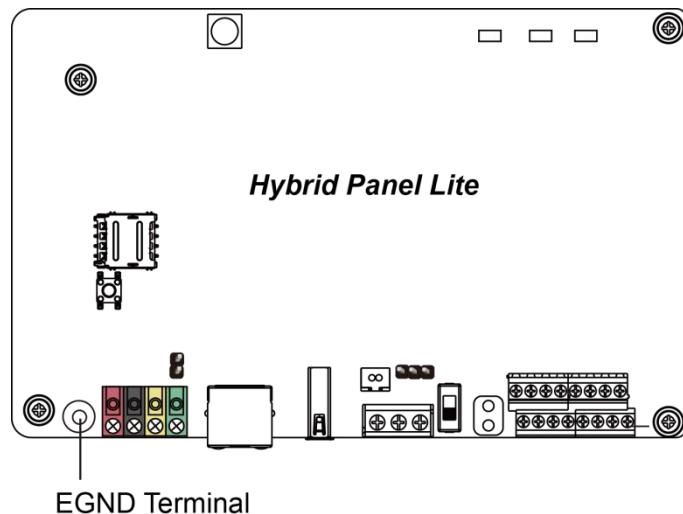

- **Example 3:** Power supply from PWB-1-BUS (Auxiliary Power Supply Module) to power BUS devices (VST-892-BUS, DC-23-BUS) instead of the Control Panel:  
VST-892-BUS

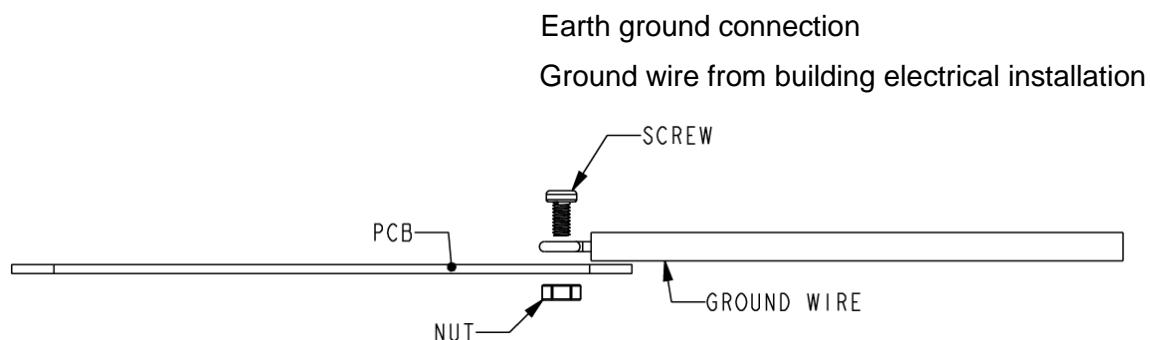

**Note:**

☞ ***When connecting the PWB-1-BUS to the Hybrid Panel Lite, only connect the three terminals (GND, 485A, 485B). When connecting the PWB-1-BUS to devices that are powered by the power bank, connect all four terminals (VDD, GND, 485A, 485B).***

## Ground Wiring

- EGND ground wiring is implemented to protect the panel from electricity leakage.
- Prepare grounding wire (insulated green wire, minimum 22 AWG), and connect it to the building's electrical outlet. Then, secure the grounding wire onto Hybrid Panel Lite's EGND Terminal using a ground screw and nut.

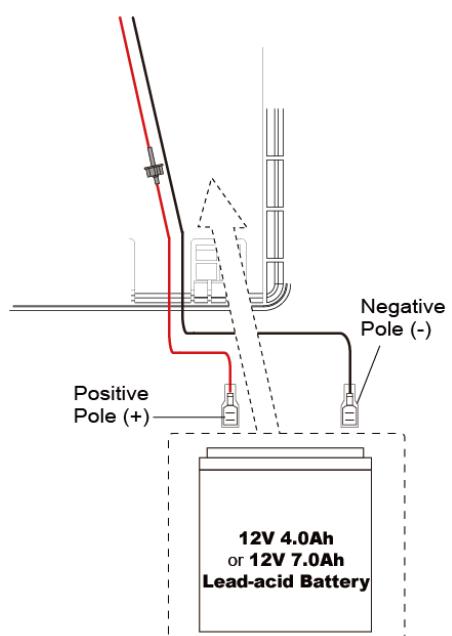

### Note:

☞ **The ground wire, nut and screw are not included in the product's package.**

## Battery Installation

- The Control Panel can support a rechargeable battery to serve as a backup power source.
- Battery options include:
  - 1) 12V/7Ah SLA battery
  - 2) 12V/4Ah SLA battery (Partition bracket required. See **3.2 Mounting** for details.)
- To Install the battery, follow the steps below:
  - 1) Connect the GND cable (Black) to the negative pole (-) of battery.
  - 2) Connect the power cable (Red) to the positive pole (+) of battery
  - 3) Attach the battery to the Hybrid Panel Lite.

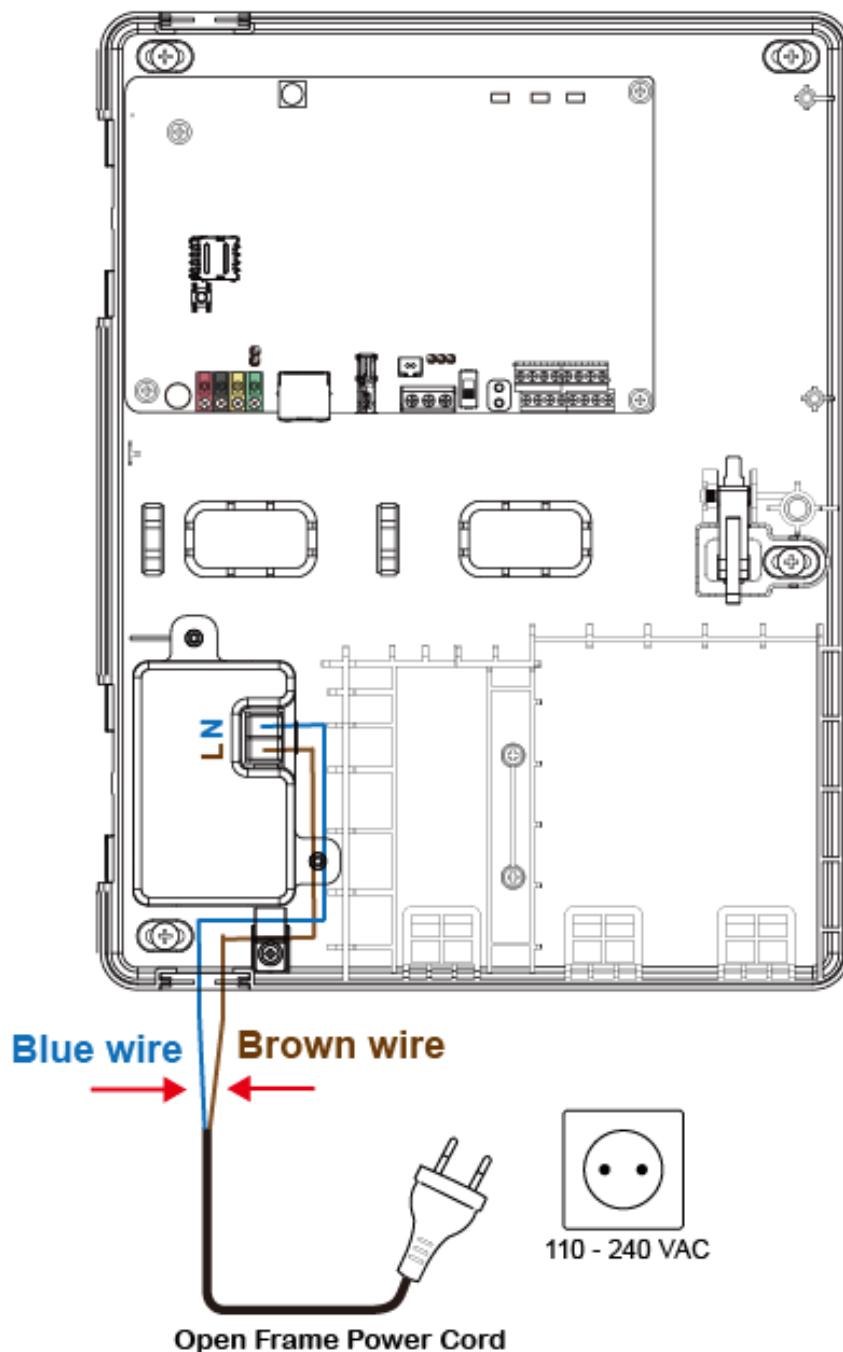

## Using the built-in Power Unit

- AC Module built-in Power Unit or Open Frame built-in Power Unit is installed. For AC module, connect 2 wires of the AC Transformer to 2 terminals of the built-in Power Unit. For Open Frame, connect **BROWN** wire of the power cord to Terminal **L** of the built-in Power Unit, and connect **BLUE** wire to Terminal **N**. Please refer to two figures below.

**Note:**

☞ **Ensure to turn off all power supplies including Built-in Power Unit and Battery before connecting or removing cables or wires.**

- Open Frame built-in Power Unit:

**Open Frame Built-in Power Unit:**  
Connecting **BROWN** wire to Terminal **L**  
Connecting **BLUE** wire to Terminal **N**

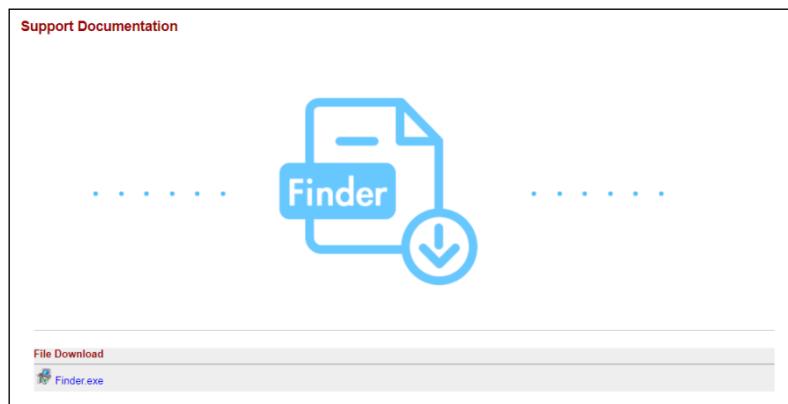

## 3.4. Software Installation

※ THIS INSTALLATION IS ONLY REQUIRED FOR FIRST TIME USER ※

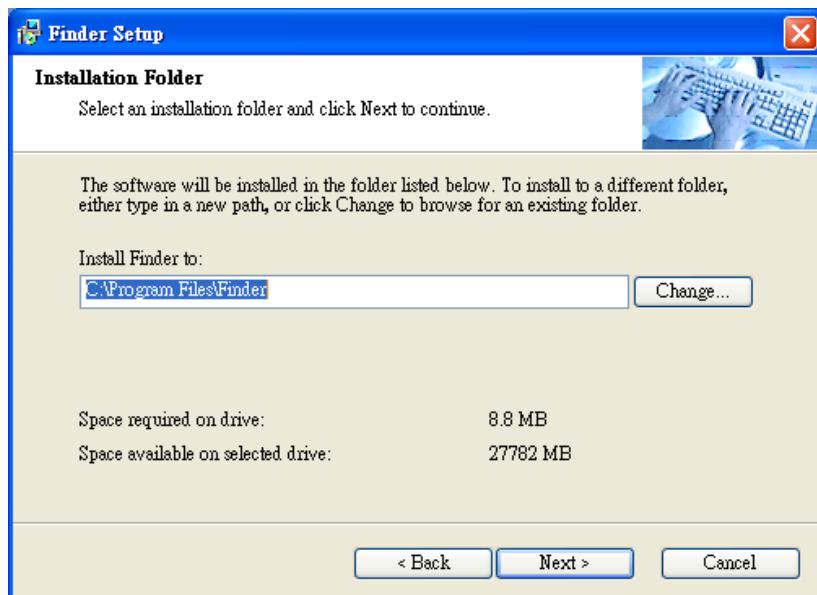

### 1. RUNNING THE FINDER SOFTWARE

The Finder software is required for your computer to identify the control panel on the LAN.

- Step 1.** To download Finder software, open your browser and type below URL in the address bar: <http://www.climax.com.tw/climax-download-finder.html>.

- Step 2.** After download, install the software and follow on-screen instructions to complete installation.

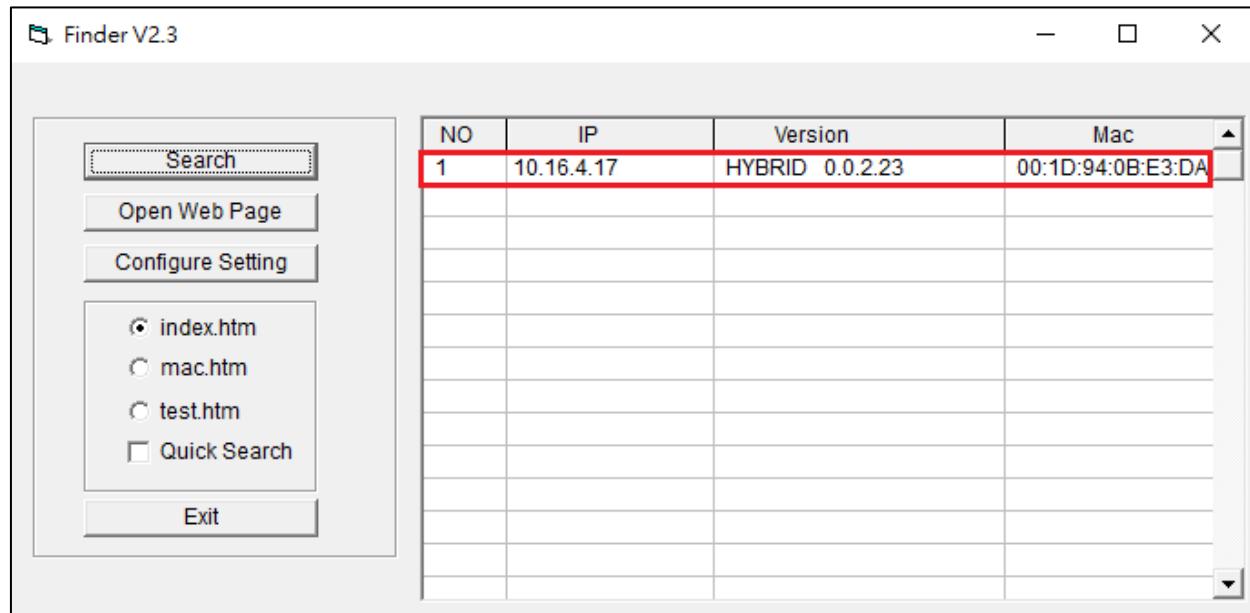

- Step 3.** Follow on screen instruction to complete installation.

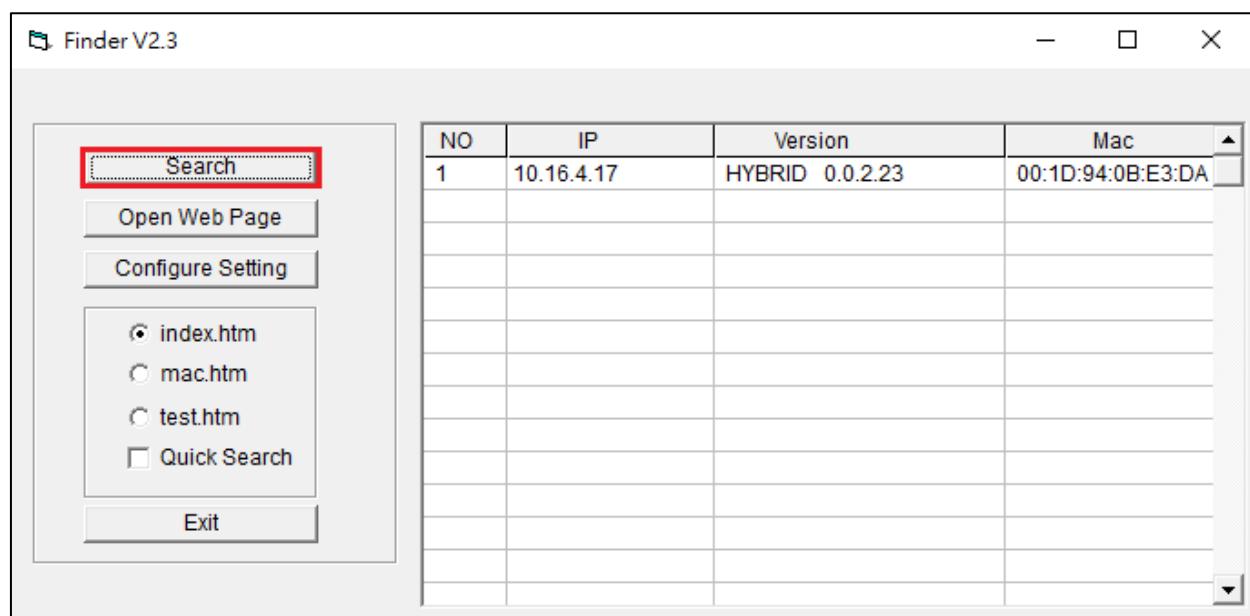

- Step 4.** Once complete, the Finder icon will be displayed on your desktop.

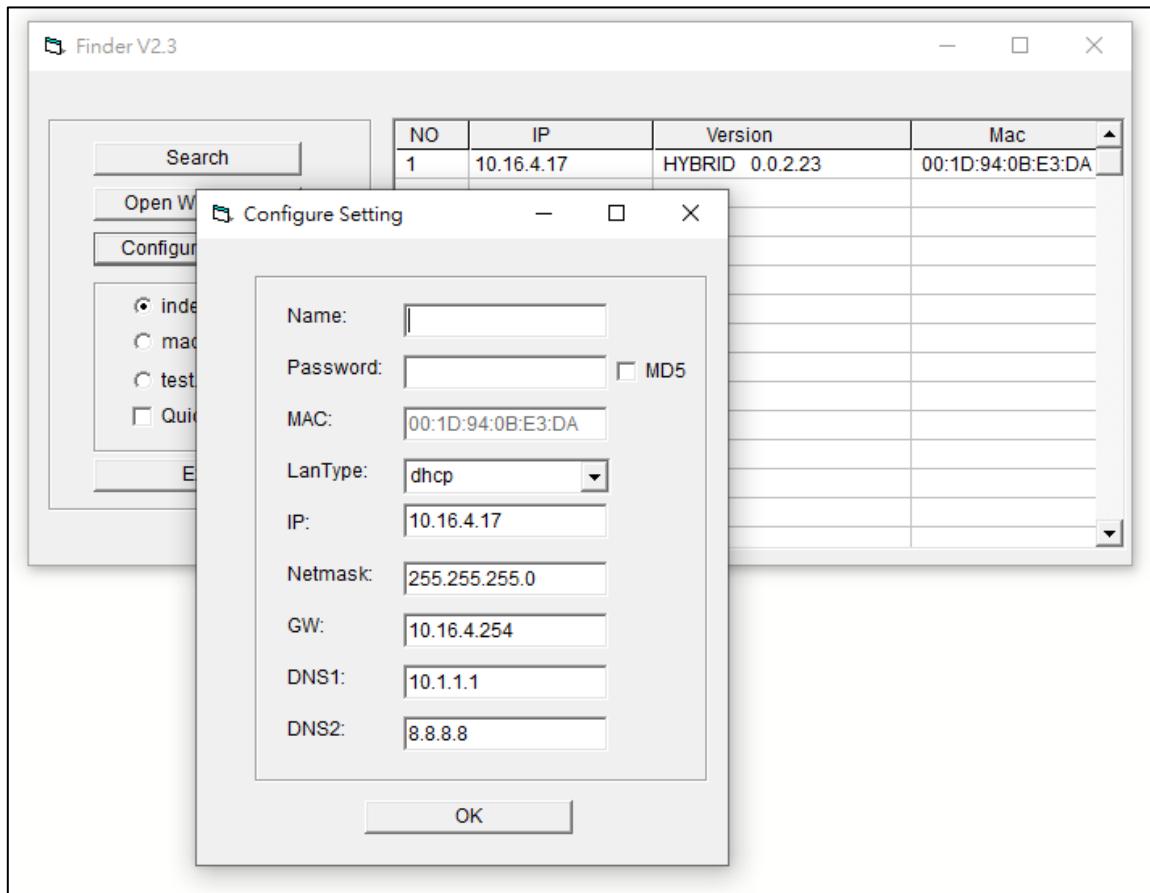

- Step 5.** Execute the Finder software. Finder will automatically search for control panel on the LAN and display its information. If available, the panel's LAN IP address, Firmware version and MAC address will be displayed

**Step 6.** If the panel information is not displayed, check panel power and Ethernet connection and click on “Search” to update the panel information.

**Step 7. (Optional)** You can choose to edit the panel's network setting by clicking on the panel column, then click "Configure Setting"

The LanType is default to **DHCP** and does not require manual input of IP/Netmask/Gateawy/DNS setting. If you wish to configure these setting manually, change LanType to **Static**.

After finish changing network setting, enter the user name (default: **admin**) and password (default: **cX+HsA\*7F1**) then click **OK** to confirm. The user name and password can be changed later in panel configuration webpage

- Step 8.** Click the panel information column and click on “**Open Web Page**”, or double click on the panel column to link to the panel configuration webpage. Your default browser will start automatically to connect to the LAN IP displayed in Finder.

## 4. Connection to Panel Webpage

For first time setup, webpage connection is only available within 1 hour after the panel is powered on; if the panel has been powered on for more than 1 hour. Webpage access will be disabled. Reboot the panel to enable webpage function again.

- Step 1.** Select the Control Panel in the Finder software and click on “Open Webpage” to connect to panel webpage.

Alternatively, enter the Control Panel IP address displayed in Finder into your browser’s address section and proceed.

- Step 2.** Enter the User name & Password to proceed

User name: **admin**

Password: **cX+HsA\*7F1**

(If wrong user name and password are entered for **5** times, the local webpage login will be disabled for **5** minutes.)

- Step 3.** You will enter panel Welcome page. The Control Panel’s information will be displayed. Click on the pages and folders on the left to access the Control Panel’s various functions

© 2011-2023 Climax Tech. Co., Ltd.

The Welcome page displays current control panel firmware version information according to different panel model and MAC address.

## 5. Device Management

The Device Management section allows you to learn in, edit, control and view all available accessory devices that can be included in the Panel.

### 5.1. Learning of Devices

Use this function to add new devices into the Control Panel. The Hybrid Panel Lite supports up to 640 zones of accessory devices, in 8 areas, up to 80 zones each area.

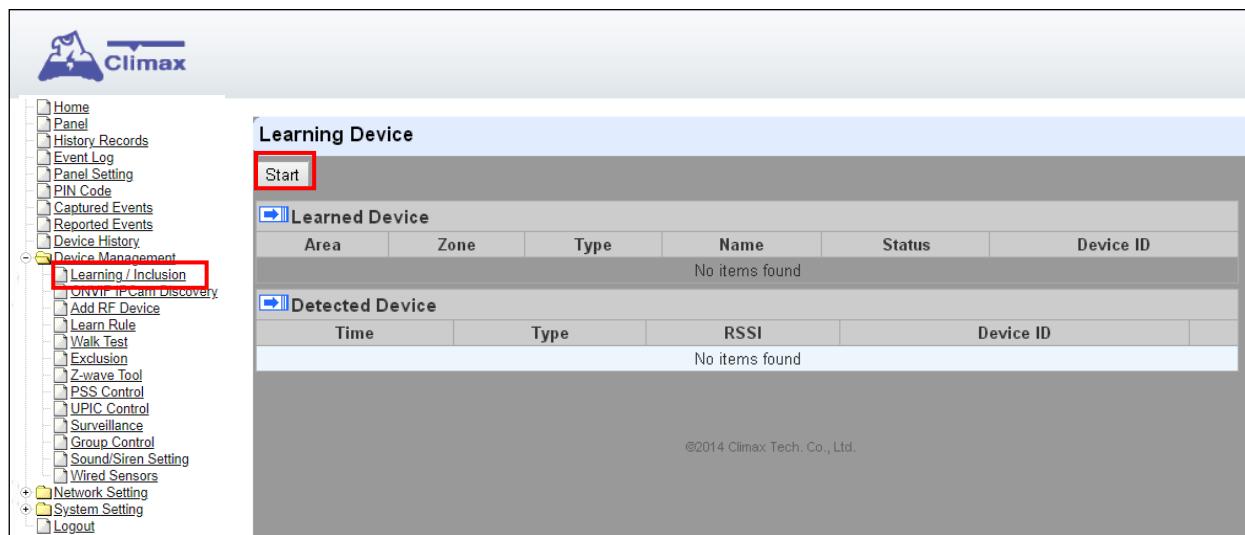

The following types of accessory devices are supported:

- **RF device:** All Climax RF devices are supported.
- **IP Cameras:** The Control Panel is compatible with Climax VST-1818 Series IP Camera. Up to 6 IP Cameras are supported.
- **BUS devices:** Compatible Keypads / Wired Security Devices / Expansion Modules that are connected via the data BUS.
- **Wired zone sensor:** NC (normally close) or NO (normally open) devices, e.g. PIR sensor, door contact, smoke detector, water sensor, fire sensor, CO sensor, gas detector, heat detector, and glass break detector, etc.

The wired zone sensor does not require learning process. Please refer to **5.9 Wired Zone Programming** for details.

#### 5.1.1. Add Sensor

**Step 1.** Click on “Learning” to enter learn page.

**Step 2.** Click on “Start” to enter learning mode.

**Step 3.** Press the test or learn button on the each device or any button on the Remote Controller. (Please refer to each sensor's user manual for test or learn button position).

#### <NOTE>

☞ For IP Camera VST-1818 Series, press and hold the Privacy button for 10 seconds.

**Step 4.** When the system received the signal transmitted from device, the screen will display its information for selection.

#### <NOTE>

☞ It takes 5-10 seconds for the Control Panel to receive a learn code from Shutter Control

Sensor.

**Step 5.** Click “Add” to include selected device into panel. If the sensor you wish to learn into already exists in the system, the sensor information will be displayed in the **Learned Device** section. If not, the sensor information will be displayed in the **Detected Device** section.

#### <NOTE>

- ☞ For VST-862 F1 devices, press and hold the learn button for 3 seconds for the Control Panel to receive a learn code, and then click “Add” within 30 seconds.

The screenshot shows the 'Learning Device' configuration page. On the left is a navigation menu with options like Home, Panel, History Records, Event Log, Panel Setting, PIN Code, Captured Events, Reported Events, Device History, Device Management (with sub-options like Learning / Inclusion, ONVIF IPCam Discovery, Add RF Device, Learn Rule, Walk Test, Exclusion, Z-wave Tool, PSS Control, UPIC Control, Surveillance, Group Control, Sound/Siren Setting, and Wired Sensors), Network Setting, System Setting, and Logout. The main area has tabs for 'Learned Device' and 'Detected Device'. The 'Detected Device' tab is active, showing a table with columns: Time, Type, RSSI, and Device ID. A single row is present: '02:31:49' | 'Door Contact' | '8' | 'RF:d291a110'. An 'Add' button is located at the bottom right of this table. The entire screenshot is framed by a blue border.

**Step 6.** If the device is successfully learnt into the system, the added device will be displayed in the “Learned Device” section.

This screenshot shows the same interface after the device has been added. The 'Learned Device' tab is now active, displaying a table with columns: Area, Zone, Type, Name, Status, and Device ID. One row is shown: '1' | '1' | 'Door Contact' | '' | '' | 'RF:d291a110'. This row is highlighted with a red rectangle. The 'Detected Device' table below it is empty, showing 'No items found'. The copyright notice '©2014 Climax Tech. Co., Ltd.' is visible at the bottom. The entire screenshot is framed by a blue border.

**Step 7.** Repeat Step 3~5 to learn in all device, click Stop to exit learn mode when complete. The system will automatically exit Learn mode if left idle for 5 minutes.

#### **5.1.2. Local Learning**

Instead of learning devices via configuration webpage, you can also learn in devices by using the learn button of the Control Panel.

**Step 1.** Press and hold the learn button of the Control Panel for 10 seconds, release when the Control Panel emits one short beep. LED 1 & 2 (Green) will turn ON to indicate the Control Panel is now in learning mode.

**Step 2.** Press the test or learn button on each device to transmit signal, refer to device manual for detail.

**Step 3.** When the Control Panel receives signal from device, it will emit 2 beeps to confirm. The

device will be included in the panel automatically.

**Step 4.** After finishing learning all devices, press the button once. The Control Panel will emit 2 short beeps to indicate it has returned to normal operation mode. LED 1 & 2 will dim. If the user does not press the button within 5-6 minutes, the system will automatically return to normal operation mode.

#### <NOTE>

- ☞ The Control Panel cannot enter learning mode when under Away Arm/Home Arm or Walk Test mode. The Control Panel will emit 5 beeps to indicate error.

### 5.1.3. Edit Devices

After finish learning devices, proceed to edit the device setting.

**Step 1.** Click **Panel** to enter Panel webpage. All learnt in devices will be displayed under **Device List** section.

The screenshot displays the Climax Control Panel software interface. On the left, a sidebar menu lists various options such as Home, Panel (which is selected and highlighted with a red box), History Records, Event Log, Panel Setting, PIN Code, PIN Code (NEW), Captured Events, Reported Events, Device History, Device Management (Learning / Inclusion, ONVIF IPCam Discovery, Add RF Device, Learn Rule, Walk Test, Exclusion, Z-wave Tool, PSS Control, Surveillance, Sound/Siren Setting), Network Setting, System Setting, and Logout. The main area is titled "Panel Control" and contains eight sections labeled Area 1 through Area 8. Each section shows the current mode as Disarm and provides radio buttons for Disarm, Full Arm, Home Arm 1, Home Arm 2, and Home Arm 3, along with OK and Reset buttons. At the bottom, there is a "Panel Status" section with tabs for Internal Battery, External Battery, Tamper, Interference, AC activation, Signal GSM, and Background RSSI. The Internal Battery tab is active, showing "Battery Missing/Dead" with a red icon, while other tabs show "N/A" or "Normal" with green icons.

Internal Battery	External Battery	Tamper	Interference	AC activation	Signal GSM	Background RSSI
Battery Missing/Dead	N/A	Normal	Normal	Normal	N/A	9

+ Network Setting  
+ System Setting  
Logout

Test System: **OK**

**System in maintenance**

**Fault Status**

Fault		Setting
Panel Tamper		<input type="checkbox"/> Clear
SIM Not Inserted		<input type="checkbox"/> Clear
GSM No Signal		<input type="checkbox"/> Clear
Panel Battery Missing/Dead		<input type="checkbox"/> Clear

**OK** **Reset**

**Reload** **Scan LQI**

**Device List**

Area	Zone	Type	Name	Condition	Battery	Tamper	Bypass	RSSI	Status

Restore Response:

Exit:  No Response

Or [Cancel](#)

**Step 4.** Edit your device setting and information according to instruction below. Click “**OK**” to save your new changes when finished. Alternatively, click “**Default**” to reset all parameters to default values or click “**Reset**” to re-enter all the information.

- **Name:** Enter a name for the device.
- **Area:** Select the area which the device belongs to.
- **Zone:** Select the Device zone number.
- **Attribute List:**  
The attribute list determines panel behaviour when the panel receives trigger signal from the device. There are

#### **General Attribute:**

##### ☞ **Permanently Bypass**

This function allows user to permanently deactivate (bypass) the selected device.

- If bypassed, then the Control Panel will not respond at all when the sensor is triggered.
- If bypassed, the system can be armed directly regardless the device's fault situation. However, its fault situation will still be monitored, logged and displayed in the webpage.

##### ☞ **Latch report**

This function **ONLY** applies to Remote Control or Door Contact with Set/Unset attribute

enabled.

- Latch Report **ON**: When the device is used to change system arm mode, the Control Panel will report the arm/disarm action by the particular device.
- Latch Report **OFF**: When the device is used to change system arm mode, the Control Panel will not report the arm/disarm action by the particular device.

☞ **Set/Unset**

This function is for Door Contact only. This function allows Door Contact to control system mode.

- **Normal Close**: The system will be armed when the Door Contact is opened, and disarmed when Door Contact is closed.
- **Normal Open**: The system will be armed when the Door Contact is closed, and disarmed when Door Contact is open.

☞ **24HR**

This function enables the device to activate selected alarm event whenever it is triggered regardless of system mode. System mode response will be disabled if 24HR attribute is enabled.

**System Mode Attributes:**

The System Mode Attributes determines system behavior under particular arming mode when the sensor is triggered.

☞ **No Response**

- When a sensor with **No Response** is triggered, the Control Panel will not respond.

☞ **Start Entry Delay 1/ Start Entry Delay 2**

- When the system is under Full Arm or Home Arm mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, Control Panel will start an entry countdown period to give enough time to disarm the system.
- When the Control Panel is in the Disarm mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, the Control Panel will immediately report a burglar interior alarm (**CID code: 132**).
- When the Control Panel is in the Full Arm mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, the Entry Delay 1/2 timer starts counting down. If no correct pin code is entered during the entry delay timer to disarm the system, the Control Panel will report a burglar perimeter alarm (**CID code:131**) immediately after entry delay timer 1/2 expires.
- When the Control Panel is in the Home Arm 1/2/3 mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, the Entry Delay 1/2 timer starts counting down. If no correct pin code is entered during the entry delay period to disarm the system, the Control Panel will report a burglar interior alarm (**CID code: 132**) immediately after entry delay timer 1/2 expires.

☞ **Chime**

- When the system is in Arm/ Home Arm 1/ Home Arm 2/ Home Arm 3 mode, if a sensor set to Chime is triggered, the Control Panel will sound a Door Chime (Ding-Dong Sound).

☞ **Burglar Follow**

- When the system is in Full Arm or Home Arm mode mode, if a sensor set to **Burglar Follow** is triggered, the Control Panel will report a burglar alarm

immediately.

- When a Start Entry sensor is triggered and the system is under Entry Delay Timer countdown, if a sensor set to **Burglar Follow** is triggered, the Control Panel will wait until the Entry Delay Timer expires before activating a burglar alarm. If the system is disarmed before the timer expires, the Control Panel will not activate alarm.

☞ **Burglar Instant**

- When the system is under Full arm or Home Arm / Disarm / Entry Time mode, if a sensor set to **Burglar Instant** is triggered, the Control Panel will report a burglar alarm immediately.

☞ **Burglar Outdoor**

- When the system is in Full Arm or Home Arm / Disarm / Entry Time mode, if a sensor set to **Burglar Outdoor** is triggered, the Control Panel will report a burglar outdoor event immediately.

☞ **Cross Zone**

- See **10.3 Appendix – Cross Zone Verification** for detail.

☞ **Apply Scene**

- This function is only available for Remote Keypad and Remote Control.
- Select a Home Automation Scene number for a Remote Keypad or Remote Control button. When the button is pressed, the Control Panel will execute the actions programming in the Scene accordingly. For more information, please refer to **8.3. Scene**.

**Home Automation Attributes:**

The Home Automation Attributes allows a device to control Home Automation function.

☞ **Trigger Response**

- When the device is triggered, the Control Panel will activated selected Home Automation Scene number. Please refer to **8.3. Scene** webpage for detail.

☞ **Restore Response**

- When the device transmits restore signal after trigger, the Control Panel will activate selected Home Automation Scene number.

**Other Attributes:**

☞ **Permanent Bypass**

- When checked, the panel will completely ignore all signal received from this device. A bypassed device will be unable to trigger any response, including alarm or fault from the Control Panel. All other attribute settings will be also be ignored.

☞ **Exit (No Response)**

- If checked, the panel will ignore trigger signal from this sensor during Exit Time countdown. If deselected, the panel will activated burglar alarm and report immediately when the sensor triggered during Exit Delay Timer.

☞ **24HR**

- A sensor set to 24HR attribute will ignore Disarm, Full Arm, Home are and Exit response setting. The panel will activate selected alarm when this sensor is triggered regardless of system mode under any time.

## <NOTE>

- ☞ Some devices have their own unique functions and will have its own attribute setting which is not listed in this section. Please refer to the device manual for its setting detail.

### 5.1.4. Delete Devices

**Step 1.** To delete a sensor, click “Delete” under “Device List”

Device List										
Area	Zone	Type	Name	Condition	Battery	Tamper	Bypass	RSSI	Status	
1	1	Door Contact		█	█	█	No	N/A		<a href="#">Edit</a> <a href="#">Delete</a>

**Step 2.** A message “Delete success” is displayed and the sensor you choose is deleted successfully.

### 5.1.5 Learning of BUS Devices

**Step 1.** Connect the BUS devices to the Control Panel. Then, power on the Control Panel.

**Step 2.** Click on “Learning” to enter learn page.

#### Note:

- ☞ *Please note that if you connect all the BUS devices first, then connect them all to the Control Panel to start the learning process, the maximum number of connected BUS devices should not exceed 20.*
- ☞ *If you connect more than 20 devices, the system may not operate smoothly and could cause errors on the panel programming webpage. It is recommended to connect and learn the devices one by one to ensure optimal system operation.*

Area	Zone	Type	Name	Status	Device ID
No items found					

Time	Type	RSSI	Device ID
No items found			

**Step 3.** Click on “Start” to enter learning mode.

Learning Device

Learned Device

Time	Area	Zone	Type	Name	RSSI	Device ID
No items found						

Detected Device

Time	Type	RSSI	Device ID
02:29:28	Expander	IN:0020bb00	Add

© 2011-2021 Climax Tech. Co., Ltd.

**Step 4.** Click “Add” to include BUS devices into panel.

**Step 5.** If a BUS device is successfully learnt into the system, the added device will be displayed in the “Learned Device” section. The Device Type will be shown under the Type column.

Learning Device

Learned Device

Time	Area	Zone	Type	Name	RSSI	Device ID

### 5.1.6. Identify BUS Device

The “Identify” function is used to localize a specific BUS device in the BUS wired system. This function is helpful in distinguishing which device is which especially in a large installation where numerous BUS devices are included.

Device List										
Area	Zone	Type	Name	Condition	Battery	Tamper	Bypass	RSSI	Status	
1	1	Door Contact		Green	Green	Tamper	No	N/A	Door Open	Edit Delete Bypass Identify
1	2	Door Contact		Green	Green	Tamper	No	N/A	Door Close	Edit Delete Bypass Identify

**Step 1.** On Hybrid Panel Lite’s webpage, click “Identify” under the device list after the device column entry.

**Step 2.** If the BUS device receives the signal from the Hybrid Panel Lite, the webpage will display a success message, and as confirmation, either the BUS device’s LED indicator will flash 10 times, or emit the beep sound for 10 times, depending on the BUS device model.

#### <NOTE>

- If a timeout message is displayed on the webpage, it means the BUS device did not receive the signal from the Panel. Please check whether the BUS device is connected properly to the Panel within appropriate wiring distance.

## 5.2. ONVIF IP Camera Discovery

You can learn-in the ONVIF IP Camera into your alarm system by connecting the IP Camera to the same local LAN of the Control Panel.

### <NOTE>

- ☞ This function is only available for integrating specific ONVIF IP Cameras.
- ☞ The server and the platform of the camera must support this function.
- ☞ See **Dahua and Hikvision Learn-in Setting Quick Guide** for detailed information.

**Step 1.** Connect IP Camera to the same LAN of Control Panel.

**Step 2.** Make sure the panel is properly installed, and open its webpage, and click on “**ONVIF IPCam Discovery**” under Device Management.

**Step 3.** Set the Control Panel into learning mode.

**Step 4.** Enter the Camera's User ID and Password under the Detected Device section.

- UserID: admin
- Password is printed on the label attached to the camera's box.

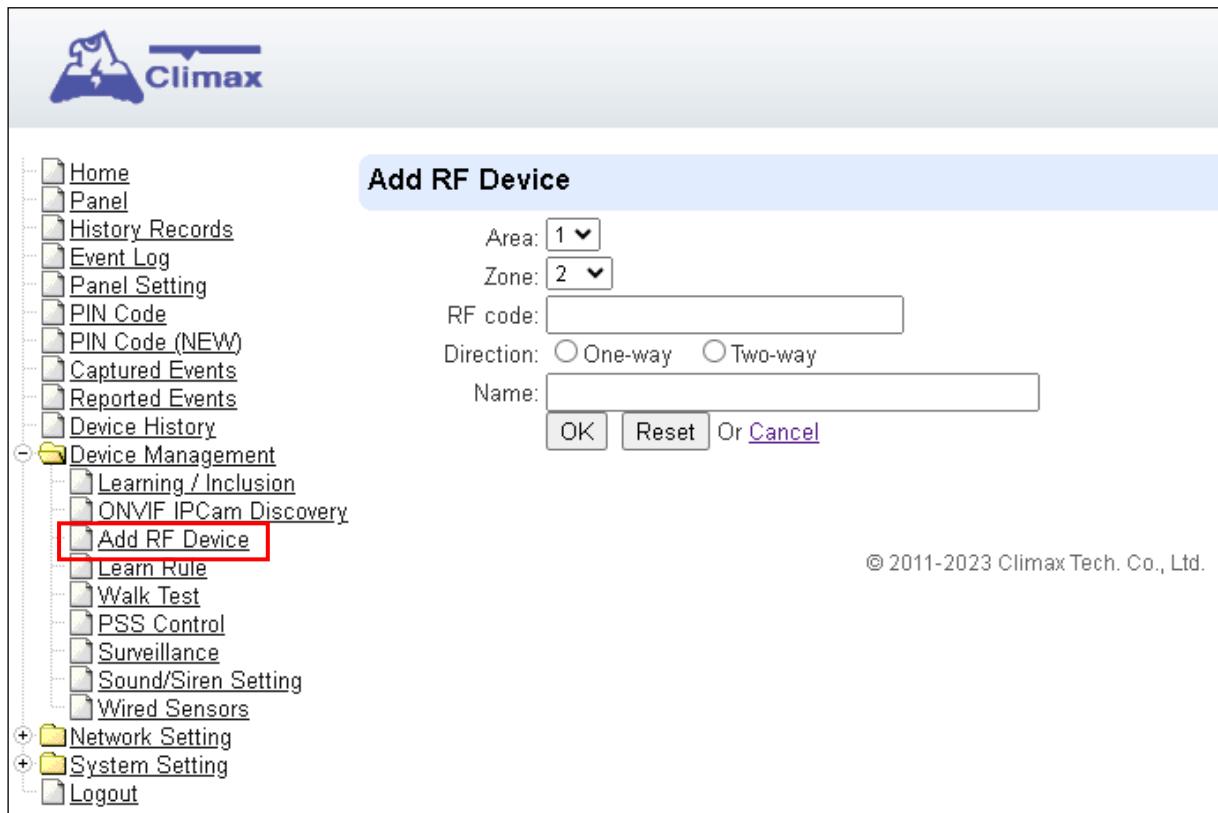

**Step 5.** Once the learning is successful, the information will be shown in Learned Device.

The screenshot shows the Control Panel interface after the ONVIF IPCam Discovery process has completed. On the left, the Device Management menu is visible with the 'Learned Device' and 'Detected Device' sections expanded. The 'Learned Device' table has one row: Time (11:16:51), Area (1), Zone (1), Type (IP Camera), Name (HIKVISION HWI-B141H), RSSI (HV:F22795303), and Device ID (HV:192.168.1.150). The 'Detected Device' table also has one row: Time (11:17:00), Type (IP Camera), Name (HIKVISION HWI-B141H), Device ID (HV:192.168.1.150), User (empty), and Password (empty). A red box highlights the 'Learned Device' table. At the bottom right of the interface, there is a copyright notice: © 2011-2021 Climax Tech. Co., Ltd.

## 5.3. Add RF Device

You can add RF devices into the system by entering its RF code into the system with **Add RF Device** function.

**Step 1.** Click **Add RF Device**.

**Step 2.** Select Area and Zone number for the device you wish to add into system.

**Step 3.** Enter the device RF code, and preferred device name (up to 31 characters)

**Step 4.** Select either one-way or two-way communication of the device.

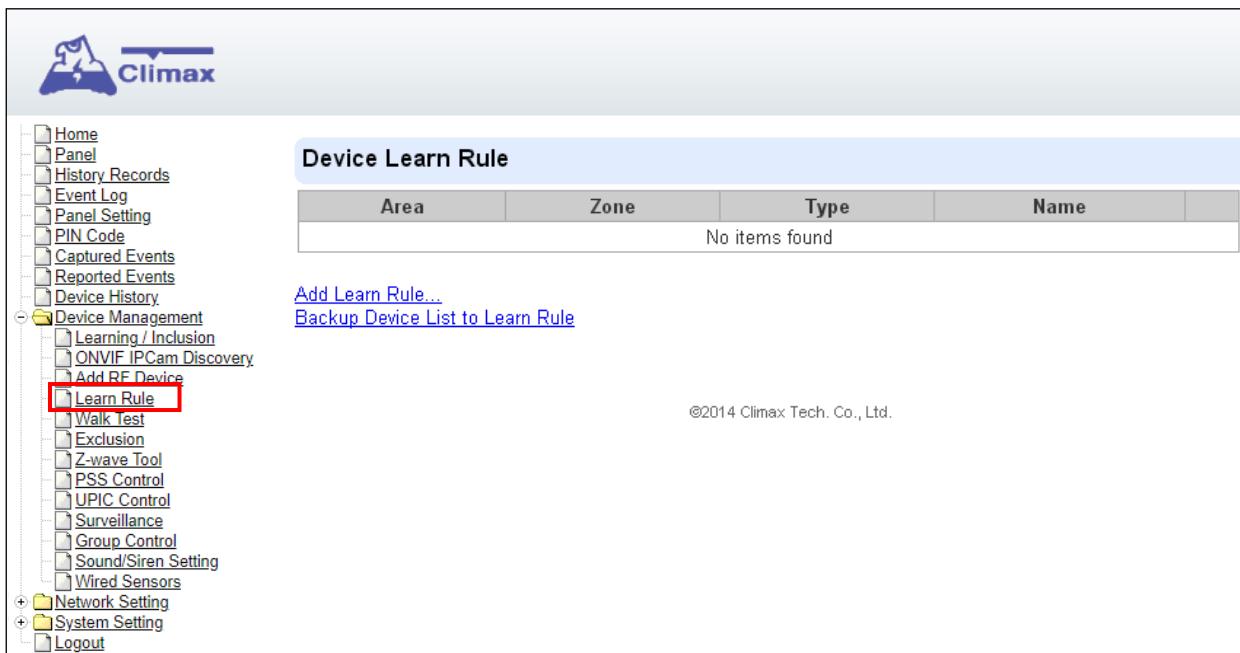

**Step 4.** Press "OK" to save

**Step 5.** If the RF code you entered is valid, the device will be added into the system according to the Area and Zone number. You do not need to learn the device as instructed in **5.1.1. Add Sensor**.

## 5.4. Learn Rule

You can enter the sensor RF code manually to assign area and zone number to this sensor. Sensors learned with pre-assigned rule will be put under the area and zone number you specified. This function does not work with Shutter Control devices and DECT device.

**Step 1.** Click **Learn Rule**.

**Step 2.** You will see the **Add Learn Rule** menu.

This is a configuration dialog box titled 'Add Learn Rule'. It includes fields for 'Area' (set to 1), 'Zone' (set to 2), 'System' (radio buttons for 'RF' and 'ZigBee', with 'RF' selected), 'RF code' (text input field), 'ZigBee MAC' (text input field), 'ZigBee Device Type' (dropdown menu set to 'IR Camera'), and 'Name' (text input field). At the bottom are 'OK', 'Reset', and 'Cancel' buttons.

**Step 3.** Select **Area** and **Zone** number for this device.

**Step 4.** Select **RF**.

**Step 5.** Key in the RF code

**Step 6.** Enter a preferred name for sensor (up to 31 letters or numbers).

**Step 7.** Press "OK" to save.

**Step 8.** If the process is successful, the screen will display "**Updated Successfully.**" You can then check, edit or delete the rule under the **Learn Rule** menu.

**Step 9.** Repeat the steps to add more rules.

**Step 10.** Learn in the sensors you have entered rules for according to **5.1.1 Add Sensor**.

### <NOTE>

- Learn rule function is only used to pre-assign area and zone number to sensors before learning. To add sensor to control panel, you still need to follow the instruction in **5.1.1 Add Sensor** to complete the learning process.

## 5.5. Walk Test

This is to test the sensor operation range for installation purpose.

**Step 1.** Click “Start” to enter Walk Test mode.

The screenshot shows the Climax Control Panel interface. On the left is a navigation tree with the following items:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- PIN Code (NEW)
- Captured Events
- Reported Events
- Device History
- Device Management
  - Learning / Inclusion
  - ONVIF IPCam Discovery
  - Add RF Device
  - Learn Rule
  - Wall Test
- PSS Control
- Surveillance
- Sound/Siren Setting
- Wired Sensors

+ Network Setting  
+ System Setting  
Logout

In the center, there is a "Walk Test" section with a "Start" button highlighted by a red box. Below it is a table with columns: Time, Area, Zone, Type, Name, RSSI, and Device ID. A message at the bottom of the table says "No items found".

© 2011-2023 Climax Tech. Co., Ltd.

**Step 2.** Press the test button on the sensor(s) or any button on the Remote Controller or triggering the sensor.

**Step 3.** When the Control Panel receives a signal, it will show as below and a 2-tone beep will be heard to indicate that it is safe to install the particular sensor in the location.

- **Time:** time information
- **Area:** operation area
- **Zone:** device zone
- **Type:** device type
- **Name:** device name
- **RSSI:** the RF signal strength between Control Panel and sensor. The RSSI value here must be higher than the RSSI value of Panel's background noise (please refer to **6.1 Panel Condition section for details**). If not, you may still learn in the sensor; however, please relocate the sensor and use Walk test to find a more suitable location.
- **DeviceID:** device's unique identification code.

### <NOTE>

- In walk test mode, all the devices currently connected via BUS will be displayed in the walk test list. If a BUS device has a test/learn button, pressing the button will also move the BUS device to the top of the list.

**Step 4.** Once all sensors are tested, click on “Stop” to exit Walk Test mode. The system will automatically exit Walk Test mode if left idle for 5 minutes.

## 5.6. PSS Control

This feature is designed to control/edit/delete Power Switches included in the panel.

The screenshot shows the Climax software interface. At the top left is the Climax logo. The main menu on the left includes Home, Panel, History Records, Event Log, Panel Setting, PIN Code, PIN Code (NEW), Captured Events, Reported Events, Device History, Device Management (with sub-options like Learning / Inclusion, ONVIF IPCam Discovery, Add RF Device, Learn Rule, Wall Test, and PSS Control, where 'PSS Control' is highlighted with a red box), Surveillance, Sound/Siren Setting, and Wired Sensors. Network Setting and System Setting are also listed. Logout is at the bottom. On the right, a table titled 'Power Switch Sensor' displays one entry: Area 1, Zone 1, Type Power Switch Meter, Name (empty), Status Off, 0.0W. Below the table are links for Edit, Delete, Switch On, Switch Off, and Switch Toggle. The copyright notice ©2011 Climax Tech. Co., Ltd. is at the bottom right.

- Click **Edit** to edit attributes of power switches.
- Click **Delete** to remove power switch from panel.
- Click **Switch On/Switch Off** to turn on/off power switches. Or click **Switch Toggle** to toggle between on/off status. For Power Switch Dimmer, you can also set its power output level with the slide down menu.

## 5.7. Surveillance

The PIR Camera/Video Cameras and IP Cameras are listed under **Surveillance** for separate control.

The screenshot shows the Climax surveillance interface. On the left is a sidebar menu with the following items:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- Device Management
  - Learning / Inclusion
  - ONVIF IPCam Discovery
  - Add RF Device
  - Learn Rule
  - Walk Test
  - Exclusion
  - Z-wave Tool
  - PSS Control
  - UPIC Control
  - Surveillance** (highlighted with a red box)
  - Group Control
  - Sound/Siren Setting
  - Wired Sensors
- Network Setting
- System Setting
- Logout

The main area is titled "Surveillance" and contains a table with the following data:

Area	Zone	Type	Name				
1	2	IR Camera		<a href="#">Edit</a>	<a href="#">Delete</a>	<a href="#">Request Media</a>	<a href="#">Request Media (No Flash)</a>
1	9	IP Camera		<a href="#">Edit</a>	<a href="#">Delete</a>	<a href="#">Request Media</a>	<a href="#">View</a> <a href="#">Setting</a>

At the bottom right of the main area, it says "©2015 Climax Tech. Co., Ltd."

- Click **Edit** to edit camera attributes.
- Click **Delete** to remove device from panel.
- Click **Request Media** to capture a picture or video
  - PIR camera: A picture will be captured upon request
  - PIR Video Camera: A 10-second video will be recorded upon request
  - IP Camera: The IP Camera will record a video according to its video length setting (Please refer to IP Camera manual for detail.)
  - For PIR Camera/Video Camera, you can choose to take the picture/video without activating the camera's flash.

Picture and video captured by PIR Camera and PIR Video Camera will be stored under the **Captured Event** webpage. Video Recorded by IP Camera will be stored in the IP Camera, please refer to IP Camera manual to view the video

- For IP Camera, click "View" or "Setting" to access IP Camera webpage for video streaming or setting configuration. A new webpage will open and you will be required to enter the username and password for the IP Camera to access streaming or setting.

## 5.8. Sound/Siren Setting

The Sound/Siren Setting page includes setting Siren configuration function.

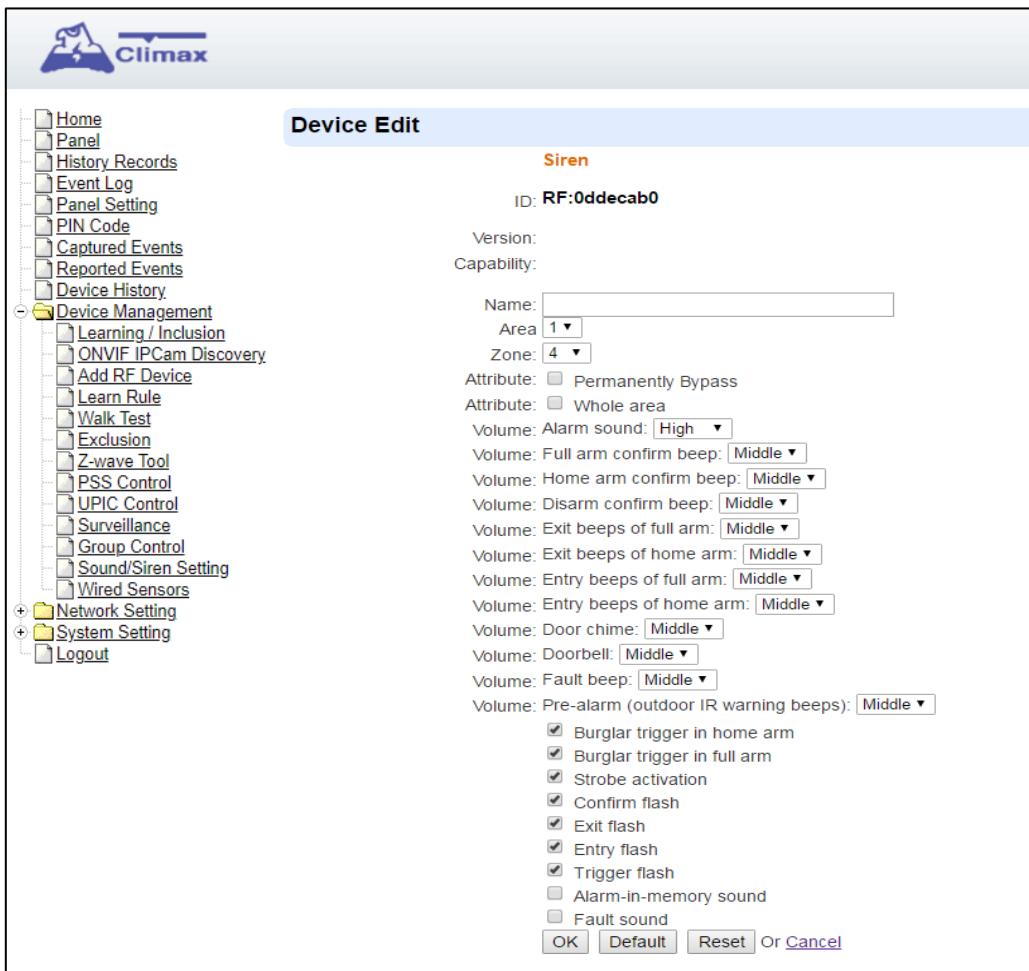

Area	Zone	Type	Name
1	4	Siren	<a href="#">Edit</a> <a href="#">Delete</a>

### 5.8.1. Device Edit/Delete

Click **Edit** to edit the Siren's attribute, volume and voice settings, or **Delete** to delete the Siren.

Area	Zone	Type	Name
1	4	Siren	<a href="#">Edit</a> <a href="#">Delete</a>

After clicking **Edit**, you will be directed to the Device Edit page:

### <NOTE>

- The Device Edit page is only available for the newest BX/Siren series and BX series **without DIP Switch**.

Edit your Siren setting and information accordingly to instruction below. Click “**OK**” to save your new changes when finished. Alternatively, click “**Default**” to reset all parameters to default values or click “**Reset**” to re-enter all the information.

- Name:** Enter a name for the Siren.
- Area:** Select the area which the Siren belongs to.
- Zone:** Select the Siren zone number.

☞ **Attribute:**

- Permanently Bypass:** If checked, the Control Panel will completely ignore all signal received from the Siren. A bypassed Siren will not be able to trigger any response, including alarm or fault from the Control Panel. All other attribute settings will also be ignored.
- Whole Area:** if checked, all the Volume, Voice and Behavior functions will be simultaneously enabled in all areas.

☞ **Volume:**

- Alarm Sound:** set the volume of the alarm sound of the Siren when alarming.
- Full arm confirm beep:** set the volume of the confirm beep sound of the Siren when Control Panel is put into Full Arm Mode.

- **Home arm confirm beep:** set the volume of the confirm beep sound of the Siren when Control Panel is put into Home Arm Mode.
- **Disarm confirm beep:** set the volume of the confirm beep sound of the Siren when Control Panel is put into Disarm Mode.
- **Exit beeps of full arm:** set exit countdown beep volume under Full Arm Mode.
- **Exit beeps of home arm:** set exit countdown beep volume under Home Arm Mode.
- **Entry beeps of full arm:** set entry countdown beep volume under Full Arm Mode.
- **Entry beeps of home arm:** set entry countdown beep volume under Home Arm Mode.
- **Door Chime:** set the volume of the Door Chime sound (Ding-Dong Sound).

☞ **Voice:**

(The following functions are only available for **SRV** devices):

- **Doorbell:** set the volume of the ring tone when pressing the button on the Video Door Phone (VDP).
- **Fault beep:** set the volume of the voice played when system is force armed under fault conditions.
- **Pre-alarm (outdoor IR warning beeps):** set the volume of the voice played when an outdoor burglar sensor(Door Contact, IR) is triggered.

☞ **Behavior**

(The following functions are only available for **RF modules**):

- **Burglar trigger in home arm:** Enable or Disable whether Siren is activated when an alarm is triggered under Home Arm.
- **Burglar trigger in full arm:** Enable or Disable whether Siren is activated when an alarm is triggered under Full Arm.
- **Strobe activation:** Enable or Disable Siren LED strobe activation.
- **Confirm flash:** Enable or Disable Siren LED flash when system Armed/Disarmed.
- **Exit flash:** Enable or Disable Siren LED flash during an exit countdown period.
- **Entry flash:** Enable or Disable Siren LED flash during an entry countdown period.
- **Trigger flash:** Enable or Disable the flashing from the Siren LED when alarming.
- **Alarm-in-memory sound:** Enable or Disable Alarm in Memory sound.
- **Fault sound:** Enable or Disable system fault sounds.

## 5.8.2. RF Siren Setup

The screenshot shows the Climax software interface for RF Siren Setup. On the left is a navigation tree with items like Home, Panel, History Records, Event Log, Panel Setting, PIN Code, Captured Events, Reported Events, Device History, Device Management (with sub-options like Learning / Inclusion, ONVIF IPCam Discovery, Add RF Device, Learn Rule, Walk Test, Exclusion, Z-wave Tool, PSS Control, UPIC Control, Surveillance, Group Control, Sound/Siren Setting, and Wired Sensors), Network Setting, System Setting, and Logout. The main area is titled "Sound/Siren Setting" and contains a table with columns Area, Zone, Type, and Name. A single row is shown with values 1, 4, Siren, and empty Name fields, with Edit and Delete links. Below the table is a red-bordered section titled "RF Siren Setup" containing "Tamper On" and "Tamper Off" buttons. At the bottom right is a copyright notice: ©2017 Climax Tech. Co., Ltd.

Area	Zone	Type	Name
1	4	Siren	<a href="#">Edit</a> <a href="#">Delete</a>

### ➤ Tamper On/Off

You can enable/disable all RF Sirens tamper protection with this function. Select to turn on or off the sirens tamper function.

#### <NOTE>

- When turned off, if siren tamper will be enabled again automatically after one hour if not turn on manually during the one hour period.

## 5.9. Wired Zones Programming

### 5.9.1. Eight On-board Zones and Zone Expanders (WEZC-8 Series, WEZ-12/24/36/48-BUS)

**Step 1.** Click on “**Wired Sensors**” to enter this page. The 8 on-board zone setting page is displayed as below.

Zone	Type	Loop	Resistor	Status
1	Door Contact	10	5.6K ohm	Tamper
2	Door Contact	1	1K ohm	Restore
3	Door Contact	1	1K ohm	Restore
4	Door Contact	1	1K ohm	Restore
5	Door Contact	1	1K ohm	Restore
6	Door Contact	1	1K ohm	Restore
7	Door Contact	1	1K ohm	Restore
8	Door Contact	1	1K ohm	Restore

**Step 2.** If an expander module (WEZC-8 Series or WEZ-12/24/36/48-BUS) is added, you will see **Expanders** at the bottom of the page. Click “**Edit**” at the end of the expander’s entry to access wire zone programming.

Area	Zone	Name	Condition	Battery	Tamper	Maximum Zones	Edit	Delete
1	1				Tamper	8	<b>Edit</b>	<b>Delete</b>

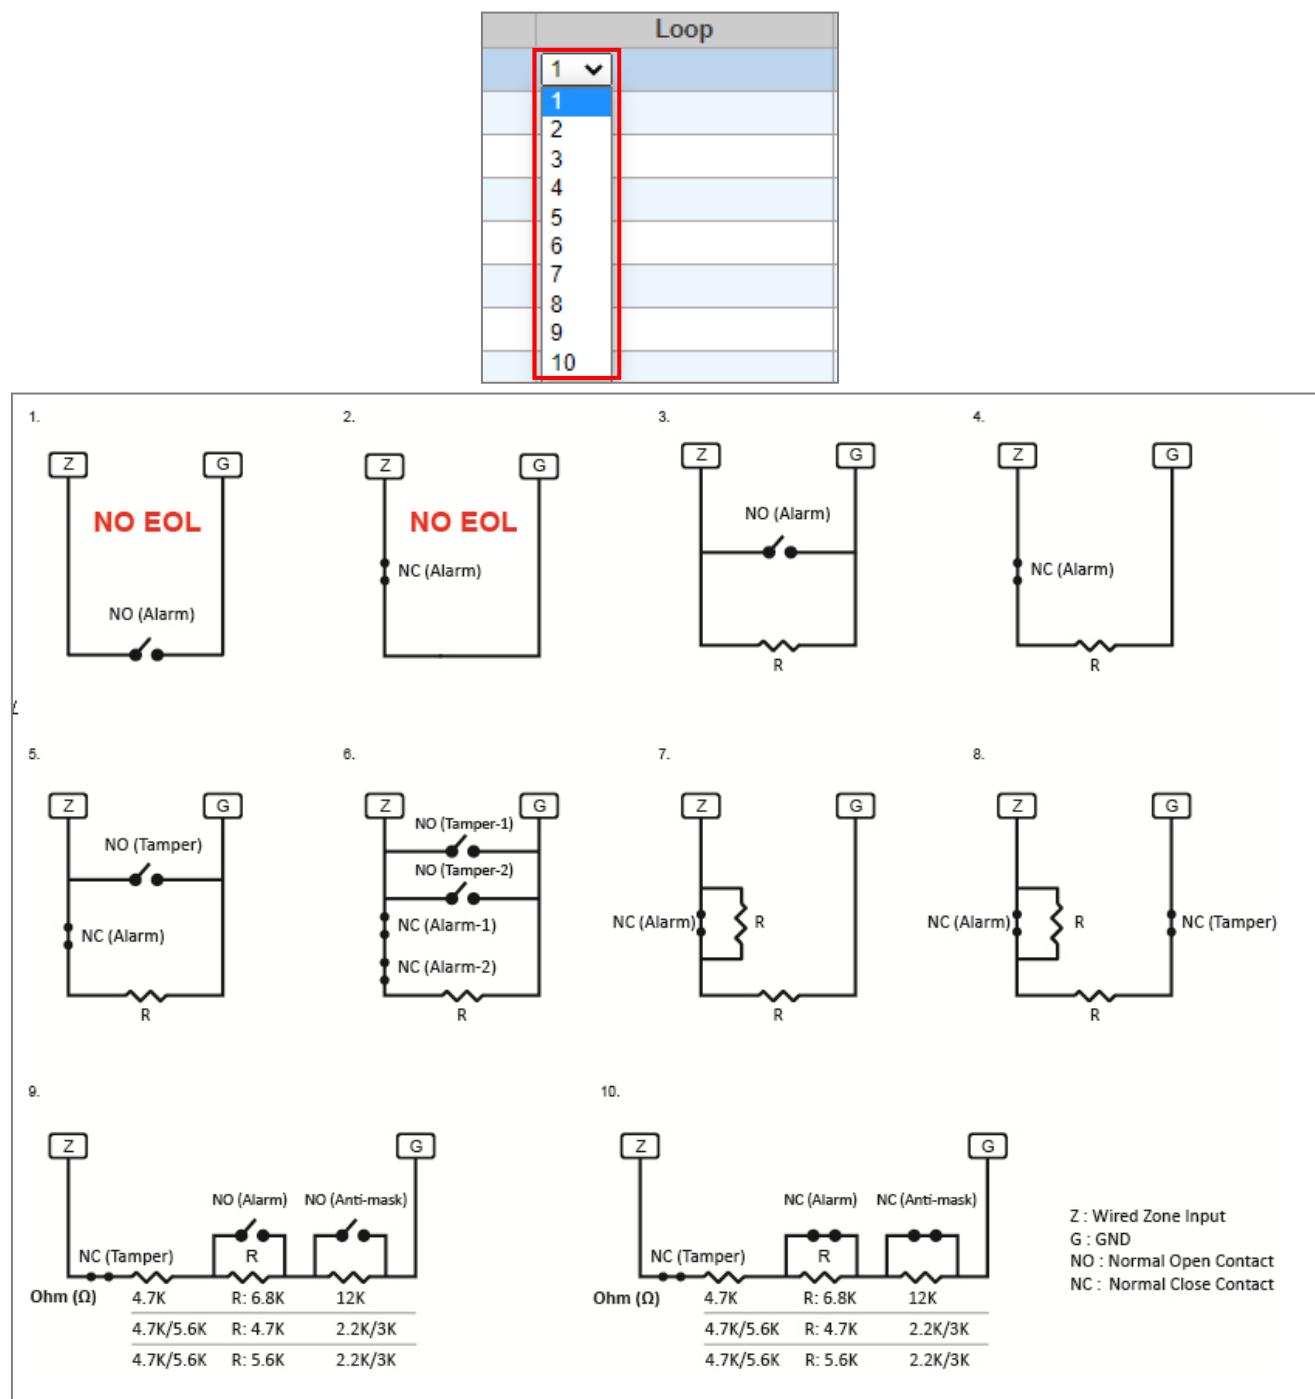

**Step 3.** Edit the type of the wired sensor, zone wiring, and the EOL resistance for each zone.

- **Type:** Select the type of the wired sensor for each zone from the drop down menu.

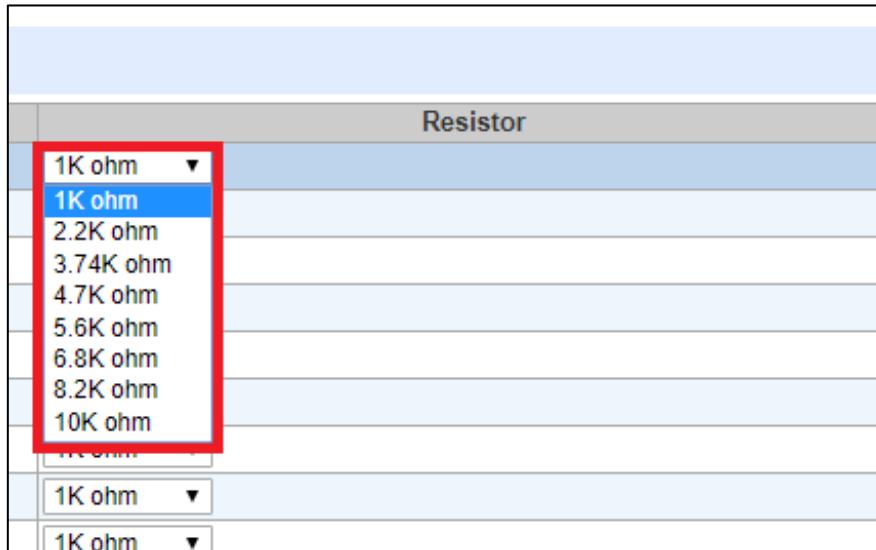

Zone	Type
1	Door Contact
2	Door Contact
3	CO
4	Smoke Detector
5	IR
6	Water Sensor
7	Glass Sensor
8	Heat Detector (Disabled)

- **Loop:** Select the number of loop corresponding to the zone wiring for each zone from the drop down menu. On this web page, there are wiring diagrams below for your reference. Please refer to **3.3 Hardware Installation – Zone Wiring** for zone wiring instructions.
- For Loop 3 to 8, resistor values are selectable from 1KΩ, 2.2KΩ, 3.74KΩ, 4.7KΩ, 5.6KΩ, 6.8KΩ, 8.2KΩ, 10KΩ ohms.

- For Loop 9 and 10, select 6.8K as the resistor value for combination 4.7KΩ, 6.8KΩ, 12KΩ, and select 4.7K as the resistor value for combination 4.7KΩ, 4.7KΩ, 2.2KΩ/3KΩ.

- Resistor:** Select the resistance for the zone wiring.

- **Status:** The status of each zone—Restore, Tamper, or Trigger—will be shown in this field.

**Step 4.** Click “OK” to save changes when finished. Alternatively, click “Reset” to re-enter all the information.

**Step 5.** If the process is successful, the screen will display “**Updated Successfully.**” The sensor will be assigned to specific area and zone. To edit the device setting or information, click “Edit” at the end of device entry.

Wired Sensors						
Zone	Type	Loop	Resistor	Status		
1	Door Contact	1 ▾	10K ohm ▾	Restore	Area1Zone5 <a href="#">Edit</a>	
2	(Disabled)	1 ▾	1K ohm ▾	Restore		
3	(Disabled)	1 ▾	1K ohm ▾	Restore		
4	(Disabled)	1 ▾	1K ohm ▾	Restore		
5	(Disabled)	1 ▾	1K ohm ▾	Restore		
6	(Disabled)	1 ▾	1K ohm ▾	Restore		

**Step 6.** You will enter Device Edit webpage. **Step 2.** To edit the device setting or information, click “Edit” at end of device entry.

Device List										
Area	Zone	Type	Name	Condition	Battery	Tamper	Bypass	RSSI	Status	
1	1	Door Contact		█	█	█	No	N/A		<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Bypass</a>

**Step 7.** You will enter Device Edit webpage

**Device Edit**

**Door Contact**

Restore Response:

Exit:  No Response

Or [Cancel](#)

**Step 8.** Edit your device setting and information according to instruction below. Click “**OK**” to save your new changes when finished. Alternatively, click “**Default**” to reset all parameters to default values or click “**Reset**” to re-enter all the information.

- **Name:** Enter a name for the device.
- **Area:** Select the area which the device belongs to.
- **Zone:** Select the Device zone number.
- **Attribute List:**  
The attribute list determines panel behaviour when the panel receives trigger signal from the device. There are

#### **General Attribute:**

##### ☞ **Permanently Bypass**

This function allows user to permanently deactivate (bypass) the selected device.

- If bypassed, then the Control Panel will not respond at all when the sensor is triggered.
- If bypassed, the system can be armed directly regardless the device's fault situation. However, its fault situation will still be monitored, logged and displayed in the webpage.

##### ☞ **Latch report**

This function **ONLY** applies to Remote Control or Door Contact with Set/Unset attribute

enabled.

- Latch Report **ON**: When the device is used to change system arm mode, the Control Panel will report the arm/disarm action by the particular device.
- Latch Report **OFF**: When the device is used to change system arm mode, the Control Panel will not report the arm/disarm action by the particular device.

☞ **Set/Unset**

This function is for Door Contact only. This function allows Door Contact to control system mode.

- **Normal Close**: The system will be armed when the Door Contact is opened, and disarmed when Door Contact is closed.
- **Normal Open**: The system will be armed when the Door Contact is closed, and disarmed when Door Contact is open.

☞ **24HR**

This function enables the device to activate selected alarm event whenever it is triggered regardless of system mode. System mode response will be disabled if 24HR attribute is enabled.

**System Mode Attributes:**

The System Mode Attributes determines system behavior under particular arming mode when the sensor is triggered.

☞ **No Response**

- When a sensor with **No Response** is triggered, the Control Panel will not respond.

☞ **Start Entry Delay 1/ Start Entry Delay 2**

- When the system is under Full Arm or Home Arm mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, Control Panel will start an entry countdown period to give enough time to disarm the system.
- When the Control Panel is in the Disarm mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, the Control Panel will immediately report a burglar interior alarm (**CID code: 132**).
- When the Control Panel is in the Full Arm mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, the Entry Delay 1/2 timer starts counting down. If no correct pin code is entered during the entry delay timer to disarm the system, the Control Panel will report a burglar perimeter alarm (**CID code:131**) immediately after entry delay timer 1/2 expires.
- When the Control Panel is in the Home Arm 1/2/3 mode, if a sensor with **Start Entry Delay 1/2** attribute is triggered, the Entry Delay 1/2 timer starts counting down. If no correct pin code is entered during the entry delay period to disarm the system, the Control Panel will report a burglar interior alarm (**CID code: 132**) immediately after entry delay timer 1/2 expires.

☞ **Chime**

- When the system is in Arm/ Home Arm 1/ Home Arm 2/ Home Arm 3 mode, if a sensor set to Chime is triggered, the Control Panel will sound a Door Chime (Ding-Dong Sound).

☞ **Burglar Follow**

- When the system is in Full Arm or Home Arm mode mode, if a sensor set to **Burglar Follow** is triggered, the Control Panel will report a burglar alarm

immediately.

- When a Start Entry sensor is triggered and the system is under Entry Delay Timer countdown, if a sensor set to **Burglar Follow** is triggered, the Control Panel will wait until the Entry Delay Timer expires before activating a burglar alarm. If the system is disarmed before the timer expires, the Control Panel will not activate alarm.

☞ **Burglar Instant**

- When the system is under Full arm or Home Arm / Disarm / Entry Time mode, if a sensor set to **Burglar Instant** is triggered, the Control Panel will report a burglar alarm immediately.

☞ **Burglar Outdoor**

- When the system is in Full Arm or Home Arm / Disarm / Entry Time mode, if a sensor set to **Burglar Outdoor** is triggered, the Control Panel will report a burglar outdoor event immediately.

☞ **Cross Zone**

- See **10.3 Appendix – Cross Zone Verification** for detail.

☞ **Apply Scene**

- This function is only available for Remote Keypad and Remote Control.
- Select a Home Automation Scene number for a Remote Keypad or Remote Control button. When the button is pressed, the Control Panel will execute the actions programming in the Scene accordingly. For more information, please refer to **8.3. Scene**.

**Home Automation Attributes:**

The Home Automation Attributes allows a device to control Home Automation function.

☞ **Trigger Response**

- When the device is triggered, the Control Panel will activated selected Home Automation Scene number. Please refer to **8.3. Scene** webpage for detail.

☞ **Restore Response**

- When the device transmits restore signal after trigger, the Control Panel will activate selected Home Automation Scene number.

**Other Attributes:**

☞ **Permanent Bypass**

- When checked, the panel will completely ignore all signal received from this device. A bypassed device will be unable to trigger any response, including alarm or fault from the Control Panel. All other attribute settings will be also be ignored.

☞ **Exit (No Response)**

- If checked, the panel will ignore trigger signal from this sensor during Exit Time countdown. If deselected, the panel will activated burglar alarm and report immediately when the sensor triggered during Exit Delay Timer.

☞ **24HR**

- A sensor set to 24HR attribute will ignore Disarm, Full Arm, Home are and Exit response setting. The panel will activate selected alarm when this sensor is triggered regardless of system mode under any time.

## <NOTE>

- ☞ Some devices have their own unique functions and will have its own attribute setting which is not listed in this section. Please refer to the device manual for its setting detail.

**Step 9.** If you want to delete the sensor, refer to step 2 and select “**Disabled**” from the drop down menu of **Type** to delete it. If the process is successful, the screen will display “**Updated Successfully.**”

### 5.9.2. Output Expander (WEPC-1)

**Step 1.** Click on “**Wired Sensors**” to enter this webpage.

Zone	Type	Loop	Resistor	Status
1	Door Contact	10	5.6K ohm	Tamper
2	Door Contact	1	1K ohm	Restore
3	Door Contact	1	1K ohm	Restore
4	Door Contact	1	1K ohm	Restore
5	Door Contact	1	1K ohm	Restore
6	Door Contact	1	1K ohm	Restore
7	Door Contact	1	1K ohm	Restore
8	Door Contact	1	1K ohm	Restore

**Step 2.** If an expander module (WEPC-1) is added, you will see “**WEP**” in the **Expanders** section at the bottom of the page. Click “**Edit**” at the end of the expander’s entry to access wire zone programming.

Area	Zone	Name	Condition	Battery	Tamper	Model	Maximum Zones	
1	1				Tamper	WEP	4	<a href="#">Edit</a> <a href="#">Delete</a>

**Step 3.** Select and assign the output switch for each zone.

- **Type:** Select to activate the power switch for each zone from the Type dropdown menu. The default setting is “**Disabled**” and you can choose to assign the dry contact relay output power switch to a zone by selecting “**Power Switch**”.

**Wired Zones**  
ID: IN:02448d00

Zone	Type	Status
1	(Disabled)	Off
2	Power Switch	Off
3	(Disabled)	Off
4	(Disabled)	Off

OK Reset Or Cancel

© 2011-2022 Climax Tech. Co., Ltd.

**Step 4.** Click “OK” to save changes when finished. Alternatively, click “Reset” to re-enter all the information.

**Step 5.** If the process is successful, the screen will display “**Updated Successfully.**” The power switch will be assigned to specific area and zone.

**Wired Zones**  
ID: IN:02448d00

Zone	Type	Status	
1	Power Switch	Off	Area1Zone2 <a href="#">Edit</a>
2	Power Switch	Off	Area1Zone3 <a href="#">Edit</a>
3	Power Switch	Off	Area1Zone4 <a href="#">Edit</a>
4	Power Switch	Off	Area1Zone5 <a href="#">Edit</a>

OK Reset Or Cancel

© 2011-2022 Climax Tech. Co., Ltd.

**Step 7.** You may edit your device setting and information. Click “**Edit**” at the end of device entry and click “OK” to save changes when finished.

### Device Edit

**Power Switch**

ID: IN:02448d01

## 6. System Settings

After the initial set-up, you can then program your system by clicking on the left menu to set them individually.

### 6.1. Panel Condition

In the **Panel** Section, user can arm, disarm or partially arm the system. Besides, it displays the current **Panel Status & Device Information**.

The screenshot shows the Climax system settings interface. On the left is a navigation tree:

- Home
- Panel** (selected)
- History Records
- Event Log
- Panel Setting
- PIN Code
- PIN Code (NEW)
- Captured Events
- Reported Events
- Device History
- Device Management
  - Learning / Inclusion
  - ONVIF IPCam Discovery
  - Add RF Device
  - Learn Rule
  - Walk Test
  - Exclusion
  - Z-wave Tool
  - PSS Control
  - Surveillance
  - Sound/Siren Setting
- Network Setting
- System Setting
- Logout

The main area is titled "Panel Control". It contains eight sections, each labeled "Area 1" through "Area 8". Each section shows the current mode (Disarm) and provides options to Disarm, Full Arm, Home Arm 1, Home Arm 2, or Home Arm 3. Each section also has "OK" and "Reset" buttons. Below the sections is a "Panel Status" summary table:

Panel Status						
Internal Battery	External Battery	Tamper	Interference	AC activation	Signal GSM	Background RSSI
Battery Missing/Dead	N/A	Normal	Normal	Normal	N/A	9

Test System:  OK  
**System in maintenance**

Fault Status		Fault	Setting
SIM Not Inserted		<input type="checkbox"/> Clear	
GSM No Signal		<input type="checkbox"/> Clear	
Panel Battery Missing/Dead		<input type="checkbox"/> Clear	

Device List									
Area	Zone	Type	Name	Condition	Battery	Tamper	Bypass	RSSI	Status
1	1	Heat Detector					No	N/A	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Bypass</a>
1	2	Remote Controller					No	N/A	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Bypass</a>
1	3	Remote Controller					No	N/A	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Bypass</a>

Note		
No.	Type	Description
#1		<a href="#">Edit</a>
#2		<a href="#">Edit</a>

## Panel Control

Select a choice to arm, disarm or partially arm the system.

## Panel Status

The Control Panel will update the panel status periodically. However, in order to show the current status, you must reload the screen to refresh the display.

- **Internal/External Battery:** When battery is running low, a “low battery” message will be displayed to inform you to recharge the battery.
- **Tamper:** To check if the Control Panel has activated a tamper alert.
- **Interference:** This is for you to check whether the Control Panel is purposely interfered. The jamming period detected will be accumulated, and when the total period exceeds 30 seconds within 1 minute, a “Jamming” message will be shown and reported to the Central Monitoring Station accordingly.
- **AC activation:** To check whether AC power is connected. If not, it will show “AC Failure”.
- **Signal GSM:** To check whether GSM signal is normal or not.
- **Background RSSI:** RSSI value is for you to check the RF environment around the Control Panel. It ranges from 0 to 9, where 0 refers to the weakest and 9 refers to the strongest background noise. Therefore, the lower the RSSI value, the better the environment.

## Test System

The function is designed to send a command to sever over the polling or XMPP protocol.

## Fault Status

Fault Status	
Fault	Setting
Panel Tamper	<input type="checkbox"/> Clear
SIM Not Inserted	<input type="checkbox"/> Clear
GSM No Signal	<input type="checkbox"/> Clear
Panel Battery Missing/Dead	<input type="checkbox"/> Clear

The fault events that exist in the alarm system are displayed under this section. When fault event exists in system, the control panel Fault LED will light up to indicate fault status under Disarm or Home Arm mode (The Fault LED will not light up under Arm mode).

When fault event exists, and you attempt to arm the system, the arming action will be prohibited and the panel will display fault information on the webpage. If you still want to arm the system, perform the arming action again to force arm.

You can check the “Clear” box in the setting column then click “OK” to ignore the fault event. Cleared fault event will not cause the Fault LED to light up, nor prohibit arming.

### Device List

1. The Control Panel will update the device information periodically. However, in order to show the current status, you must **reload** the screen to refresh the display.

➤ **Area:** operation area

- **Zone:** device zone
- **Type:** device type
- **Name:** device title
- **Status:** device's current status, such as tamper status, battery status, out of order condition or DC open. If PSM is added into the system, the data of PSM, such as On/Off status, voltage, electric current and watt, will be displayed.

2. Under **Device**, you could further **edit**, **delete** or **bypass** an added device (please refer to **5.1.3** and **5.1.4** for details). Beside, you can reset Panel settings or clear the system faults by pressing **Reset Panel**.

Device List										
Area	Zone	Type	Name	Condition	Battery	Tamper	Bypass	RSSI	Status	
1	2	UPIC					No	Strong, 7		<a href="#">Edit</a> <a href="#">Delete</a>
1	3	IR					No	Strong, 8		<a href="#">Edit</a> <a href="#">Delete</a>
1	6	Keypad					No	Strong, 6		<a href="#">Edit</a> <a href="#">Delete</a>

- After pressing **Reset Panel**, the Control Panel will restart in 60 seconds and all configured values will be kept without any change.

### Note

Note			
No.	Type	Description	
#1			<a href="#">Edit</a>
#2			<a href="#">Edit</a>
#3			<a href="#">Edit</a>
#4			<a href="#">Edit</a>
#5			<a href="#">Edit</a>

The function is designed for installer to make a note for each control panel. The note you make here can be delivered to a server over XMPP or polling protocol.

## 6.2. Panel Settings

Program the **Panel**, **Time** and **Sound Settings** at your discretion.

The screenshot shows the Climax Control Panel software interface. On the left is a navigation tree:

- Home
- Panel (selected)
- History Records
- Event Log
- Panel Setting (highlighted with a red box)
- PIN Code
- PIN Code (NEW)
- Captured Events
- Reported Events
- Device History
- Device Management
- Network Setting
- System Setting
- Logout

The main area contains four tabs:

- Panel Setting**:
  - AC Fail Report: 5 min
  - AC Fail Suspend: 5 sec
  - Jamming Report: 2 min
  - Auto Check-in Interval: 1 hr
  - Auto Check-in Daily Time: (HH:MM) (dropdown menu)
  - Reduce Network Traffic: Disable
  - IR Camera Resolution of Alarm Images: 320x240x6 images
  - Outdoor IR Camera in Grayscale: Enable
  - Bypass Ethernet: No
  - Service Failure Reporting (Ethernet): Disable
  - Power supply overcurrent restart time: 3 min
  - OK and Reset buttons
- Area Setting**:
  - Area: 1
  - Final Door: Off
  - Arm Fault Type: Direct Arm
  - Tamper Alarm: Full Arm
  - Supervision Check: On
- Time Setting**:
  - Supervision Timer: 24 hr
  - Entry Delay 1 for Full Arm: 20 sec
  - Entry Delay 2 for Full Arm: Disable
  - Exit Delay for Full Arm: 30 sec
  - Entry Delay 1 for Home Arm: 20 sec
  - Entry Delay 2 for Home Arm: Disable
  - Exit Delay for Home Arm: 30 sec
  - Alarm Length: 2 min
  - Cross Zone Timer: Disable
  - Fire Verification Timer: Disable
- Sound Setting**:
  - Door Chime Setting: Off (radio button selected)
  - Entry Delay Sound for Full Arm: Low
  - Exit Delay Sound for Full Arm: Low
  - Entry Delay Sound for Home Arm: Low
  - Exit Delay Sound for Home Arm: Low
  - Confirm Sound: Low
  - Warning beep: Off
  - Entry/Exit Only Final Beeps: 3 sec
  - OK and Reset buttons

### Panel Setting

- AC Fail Report:** When an AC power failure is detected, your Control Panel will report to the Central Monitoring Station according to the duration set under AC Fail Report. If 5 minutes is set, the event will be automatically reported to the CMS after 5 minutes. Your Control Panel will start to use its battery power instead of the mains power until the fault even is cleared.
- AC Fail Suspend:** After an AC power failure event is reported, the Control Panel will

convert to sleep mode to conserve battery power. During this period, both GSM and Ethernet port will be powered off, while the RF modules will keep working. If 5 seconds is set, both GSM and Ethernet port will be powered off after 5 seconds. In order to send messages to the CMS, the Control Panel will power on its GSM and Ethernet temporarily.

- **Jamming Report:** Jamming period is specified as background RSSI level detected exceeding the threshold for a period of time. The jamming period detected will be accumulated.

3 options: Disable, 1 minute and 2 minutes are provided. If 1 minute is set, once the total jamming period exceeds 30 seconds within 1 minute, a "Jamming" message will be reported to the Central Monitoring Station. If 2 minutes is set, once the total jamming period exceeds 60 seconds within 2 minutes, a Jamming message will be reported to the Central Monitoring Station. If Diable is set, the control panel will not send a jamming report to the Central Monitoring Station if a jamming fault is detected.

- **Auto Check-in Interval:** this is to select whether the Control Panel needs to send check-in reporting to the Central Station automatically and to select the period of time between check-in reports. Options available are **Disable**, **1 hour**, **2 hours**, **3 hours... up to 4 Weeks**.
- **Auto Check-in Daily Time:** When the Auto-check in Interval is set to 24HR, this setting allows the user to specify the exact time of day when the automatic check-in process should occur. For example, if the user sets the daily time to 3:00 PM, the security panel will automatically send a check-in signal to the central monitoring system every day at that specific time.
- **IR Camera Resolution of Alarm Images:** This is to select the resolution and number of pictures taken by PIR Camera when the camera detects a movement in armed mode.
- **Outdoor IR Camera in Grayscale:** This is to select whether pictures from Outdoor PIR Camera should be taken in grayscale instead of color pictures.

Options available are: **Disable** (Color Picture) and **Enable** (Greyscale picture)

- **Bypass Ethernet:** Select to enable or disable Bypass Ethernet function. When **YES** is selected, the Control Panel will bypass connection fault when Ethernet cable unplugged status is detected.
- **Service Failure Reporting:** This setting allows to periodically check the connectivity to a specific server, such as a Google server, in order to assess the status of the internet connection and report any service failures.
- **Power supply overcurrent restart time:** If a short circuit is detected at the output BUS or wired zone terminals, the Hybrid Panel will stop supplying power to all voltage output terminals, including the 8 wired zone auxiliary output, PGM, and BUS VDD terminal, to ensure that the panel CPU is protected and will continue to operate without interruption.

You can set the power supply restart time to 1, 3, 5, 10, or 15 minutes. The Panel will restart supplying power according to the duration set.

- ☞ If a short circuit status is still not cleared when re-supplying power, the Panel will cut power for the voltage output terminals again.
- ☞ Hybrid Panel will report to the Central Monitoring Station when a short circuit is detected. When power output is restored, the panel will also make report to the Central Monitoring Station.
- **Mute Internal Siren:** The setting allows users to disable the internal siren of the security system and instead emit a beep sound for audible notifications.

## **Area Setting**

- **Area:** Select operation area to apply setting.

- **Final Door:** If set to **On**: When the system is Away Armed and under exit timer countdown, if a opened Door Contact set to Entry attribute is closed, the system will automatically arm the system even if the exit delay timer has not expired yet.
- **Arm Fault Type:** Select how the system should respond when it is being armed under fault condition.
  - ✓ Confirm: The panel will first display a “Mode Change Fault” message and emit 2 beeps. Arming again within 10 seconds will force arm the system.
  - ✓ Direct Confirm: The system will be force armed directly without displaying fault message and report an event.
- **Tamper Alarm:** Select whether the siren should sound alarm when the tamper is triggered.
  - ✓ Full Arm: when tamper is triggered under **Full arm mode**, Control Panel raises a local alarm and sends report to the monitoring center. While under Home Arm or Disarm modes no alarm will be activated, nor report sent.
  - ✓ Always: Control Panel raises a local alarm and send report for tamper-trigger in all modes.
- **Supervision Check:** Select to enable or disable system supervision function. When **ON** is selected, the Control Panel will monitor the accessory devices according to the supervision signal received.

## Time Setting

- **Supervision Timer:** The Control Panel monitors accessory devices according to the supervision signal transmitted regularly from the device. User this option to set a time period for receiving supervision signals. If the Control Panel fails to receive supervision signal from a device within this duration, it will consider the device out of order and report the event accordingly.
- **Entry Delay 1 for Full Arm:** Set Entry Delay Timer 1 for full arm mode. When a sensor set to Start Entry Delay 1 is triggered under Full Arm mode, the control panel will begin Entry Delay Timer countdown according to duration set with this option  
  
 If the Control Panel is disarmed before the Entry Delay Timer expires, the panel returns to Disarm mode and no alarm is activated. If the Control Panel is not disarmed before the Entry Delay Timer expires, the alarm will be activated and the panel will send report.
- **Entry Delay 2 for Full Arm:** Set Entry Delay Timer 2 for full arm mode. When a sensor set to Start Entry Delay 2 is triggered under Full Arm mode, the control panel will begin Entry Delay Timer countdown according to duration set with this option  
  
 If the Control Panel is disarmed before the Entry Delay Timer expires, the panel returns to Disarm mode and no alarm is activated. If the Control Panel is not disarmed before the Entry Delay Timer expires, the alarm will be activated and the panel will send report.
- **Exit Delay for Full Arm:** Set the Exit Delay Timer when entering Full Arm mode. When the user changes system mode to Full Arm, the panel will begin Exit Delay Timer Countdown and enter Full Arm mode when the timer expires. The user must leave area protected by sensors before the timer expires, otherwise an alarm will be activated with the sensor is triggered.
- **Entry Delay 1 for Home Arm:** Set Entry Delay Timer 1 for Home Arm mode. When a sensor set to Start Entry Delay 1 is triggered under Home Arm mode, the control panel will begin Entry Delay Timer countdown according to duration set with this option  
  
 If the Control Panel is disarmed before the Entry Delay Timer expires, the panel returns to Disarm mode and no alarm is activated. If the Control Panel is not disarmed before the Entry Delay Timer expires, the alarm will be activated and the panel will send report.

- **Entry Delay 2 for Home Arm:** Set Entry Delay Timer 2 for Home Arm mode. When a sensor set to Start Entry Delay 2 is triggered under Home Arm mode, the control panel will begin Entry Delay Timer countdown according to duration set with this option. If the Control Panel is disarmed before the Entry Delay Timer expires, the panel returns to Disarm mode and no alarm is activated. If the Control Panel is not disarmed before the Entry Delay Timer expires, the alarm will be activated and the panel will send report.
- **Exit Delay for Home Arm:** Set Exit Delay Timer for Home Arm mode. When the user changes system mode to Home Arm, the panel will begin Exit Delay Timer Countdown and enter Home Arm mode when the timer expires. The user must leave area protected by sensors before the timer expires, otherwise an alarm will be activated with the sensor is triggered (Default as 10 seconds).
- **Alarm Length:** Set the duration the external siren should sound when an alarm is activated.
- **Cross Zone Timer:** Please refer to **10.3 Cross Zone Timer** for details
- **Fire Verification Time:** Please refer to **10.4 Fire Verification Timer** below for details.

### Sound Setting

- **Door Chime Setting:** this function is available only when the attribute of Door Contact (DC) and/or PIR detector (IR) is set as **Door Chime**.  
The Control Panel sounds a Door Chime (Ding-Dong Sound) while the DC and/or IR is activated in Disarm / Full / Home / Entry mode.
- **Entry Delay Sound for Full Arm:** this is for you to decide whether the Control Panel sounds count-down beeps and volume of beep during the entry delay time in the full arm mode.
- **Exit Delay Sound for Full Arm:** this is for you to decide whether the Control Panel sounds count-down beeps and volume of beep during the exit delay timer in the full arm mode.
- **Entry Delay Sound for Home Arm:** this is for you to decide whether the Control Panel sounds count-down beeps and volume of beep during the entry delay time in the home arm mode.
- **Exit Delay Sound for Home Arm:** this is for you to decide whether the Control Panel sounds count-down beeps and volume of beep during the exit delay timer in the home arm mode.
- **Confirm Sound:** this is for you to decide whether to turn off/or adjust Control Panel beeping sounds when changing Arm/Home Arm/Disarm mode.
- **Warning beep:** this is for you to decide whether the Control Panel will sound a warning beep whenever a fault condition has been detected and displayed. The warning beep will be silenced after the Fault message has been read by the user. When a new fault condition is detected, it will then again emit a warning beep every 30 sec.
- **Entry/ Exit Only Final Beeps:** This is for you to determine when the Control Panel should start warning beep during Entry or Exit countdown timer. For example, if the setting is set to 5 seconds, the Control Panel will only stat warning beep during the last 5 seconds of Entry or Exit countdown timer. When set to Disable, the Control Panel will sound warning beep during the entire Entry or Exit countdown timer.

## 6.3. PIN Code

The User PIN Codes are used by Remote Keypad accessory to control system mode remotely. You may set up the PIN Codes available for the areas in the control panel. Each consists of 4-6 digits (numeric number 0~9), no disallowed PIN code. User PIN code #1 for each Area is always activated factory default.

User PIN #1 in Area 1

Password: **1234**

User PIN #1 in Area 2

Password: **4321**

No.	User Code	Tag Numbers	User Name	Delete
1.		Load		<input type="checkbox"/>
2.		Load		<input type="checkbox"/>
3.		Load		<input type="checkbox"/>
4.		Load		<input type="checkbox"/>
5.		Load		<input type="checkbox"/>
6.		Load		<input type="checkbox"/>
7.		Load		<input type="checkbox"/>
8.		Load		<input type="checkbox"/>
9.		Load		<input type="checkbox"/>
10.		Load		<input type="checkbox"/>
11.		Load		<input type="checkbox"/>
12.		Load		<input type="checkbox"/>

### Area

**Area:** Select the area for setting User PIN Code.

### User Code Setting

- **User Code:** Enter the 4-digit code in the field.
- **Tag Numers:** Click Load button on the webpage to learn the tag into the Control Panel.
- **User Name:** Enter a user name for easy recognition of system events. Up to 17 alphanumerical characters are allowed for each user name.
- **Delete:** Check the box if you want to delete selected user. User#1 in each area cannot be deleted

After finish all setting, click **OK** to confirm change.

## 6.4. PIN Code (New)

This page is another method to set up the PIN code, and you may manage multiple area pin codes in this page.

The screenshot shows the Climax web interface with a sidebar menu on the left and a main configuration table on the right.

**Left Sidebar (Menu Tree):**

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- PIN Code (NEW) (selected)
- Captured Events
- Reported Events
- Device History
- Device Management
  - Learning / Inclusion
  - ONVIF IPCam Discovery
  - Add RF Device
  - Learn Rule
  - Walk Test
  - Exclusion
  - Z-wave Tool
  - PSS Control
  - Surveillance
  - Sound/Siren Setting
- Network Setting
- System Setting
- Logout

**Main Content Area:**

### PIN Code (NEW)

No.	User Code	Area	User Name
1.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
2.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
3.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
4.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
5.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
6.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
7.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
8.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
9.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
10.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
11.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>
12.	<input type="text"/>	<input type="checkbox"/>	<input type="text"/>

- User Code:** Enter the 4-digit code in the field.
- Area:** The eight boxes stand for area 1 to 8. Check the boxes to assign the user code and user name to the areas.
- User Name:** Enter a user name for easy recognition of system events. Up to 17 alphanumerical characters are allow for each user name.

After finish all setting, click **OK** to confirm change.

## 7. Network Settings

### 7.1. GSM

The screenshot shows the Climax device's web-based configuration interface. The left sidebar menu includes Home, Panel, History Records, Event Log, Panel Setting, PIN Code, PIN Code (NEW), Captured Events, Reported Events, Device History, Device Management, Network Setting (which is expanded to show GSM, Network, LoRa, UPnP), System Setting, and Logout. The main content area is titled 'GSM' and displays the following configuration:

Status: Insert SIM, IMEI: 862646061403173, IMSI:

**Check SIM**  
Test present of SIM card  No  Yes

**Report Fail**  
Report when no signal  No  Yes

**Time Limit**  
Max connection time for  IP network

**GPRS**  
APN: internet  
User:  
Password:

**MMS**  
APN:  
User:  
Password:  
URL:  
Proxy Address:  
Proxy Port: 8080

**SMS**  
SMS Keyword:  
SMS P-word: PROG

**Two-Way Setting**  
Speaker: 7  
Microphone: 7

#### Check SIM

This is designed for the system to check if the SIM card is inserted or not. (**If users do not intend to use the GSM function, please tick “NO” to ensure the system will not check if the SIM card is inserted or not and it will not display the GSM fault by LED flashing.**)

#### Report Fail

This is designed for the user to choose whether or not the system should report signal failure.

## **Time Limit**

By default, the system will shut down the GSM network after an hour, switching the network connection to Ethernet. If the network connection of Ethernet is poor, the system will automatically connect to GSM network again.

## **GPRS**

In order to allow GPRS to serve as a back-up IP Reporting method, this section will need to be programmed before reporting.

- **APN (Access Point) Name**

It is the name of an access point for GPRS. Please inquire your service provider for an APN. When APN is set, the system becomes valid for internet connection.

- **User (GPRS)**

It is the Log-in name to input before accessing the GPRS feature. Please inquire your service provider.

- **Password (GPRS)**

It is the User Password to input before accessing the GPRS feature. Please inquire your service provider.

## **<NOTE>**

- All values will be applied to all Areas.

## **MMS**

The MMS settings are offered by your telecom service provider. Before configuring this function, contact your service provider for correct MMS setting information of the inserted SIM card.

- **APN (Access Point) Name**

Enter a MMS APN name provided by your service provider.

- **User**

Enter the Log-in name for accessing the MMS feature provided by your telecom service provider.

- **Password**

Enter the password for accessing the MMS feature provided by your telecom service provider.

- **URL**

Enter the MMS APN URL provided by your telecom service provider.

- **Proxy Address**

Enter the MMS Proxy Address provided by your telecom service provider.

- **Proxy Port**

Enter the MMS Proxy Port provided by your telecom service provider.

## **SMS**

- **SMS Keyword**

For sending remote commands to system via SMS message, a personalized password is required for the Control Panel to recognize your authority.

- **SMS P-Word**

Program Keyword is used to recognize the identity of a valid user; and to give authority for Remote Installing (through SMS Text) or Remote Upgrading purposes (through GPRS). This keyword will need to be inserted whenever the Remote Setting or Remote Upgrading is required. A maximum of 15 characters is allowed.

## **Two Way Setting**

The two-way setting is designed to adjust speaker volume and microphone sensitivity on DECT device for two-way communication.

The screenshot shows a configuration window titled "Two-Way Setting". It contains two dropdown menus: "Speaker" set to 9 and "Microphone" set to 7. At the bottom right are "OK" and "Reset" buttons. Below the buttons are two blue links: "Send SMS..." and "GSM Reset".

## **Send SMS Message**

This feature is designed for you to send a SMS message on this web configuration page.

**Step 1.** Click **Send SMS**.

The screenshot is identical to the one above, but the "Send SMS..." link is highlighted with a red rectangle.

**Step 2.** Enter a desired phone number and text message.

The screenshot shows a configuration window titled "Send SMS". It has two input fields: "Phone Number:" and "Text:". At the bottom are "OK" and "Reset" buttons.

## **Reset GSM**

This feature is designed for you to reset GSM module.

**Step 1.** Click **GSM Reset**.

The screenshot is identical to the one above, but the "GSM Reset" link is highlighted with a red rectangle.

**Step 2.** A pop-out message "Are you sure?" is displayed. Click **Yes** to confirm resetting.

## 7.2. Network

This is for you to program the Network for IP connection.

The screenshot shows the Climax software interface with the 'Network' tab selected. On the left, there is a navigation tree with items like Home, Panel, History Records, Event Log, Panel Setting, PIN Code, PIN Code (NEW), Captured Events, Reported Events, Device History, Device Management, Network Setting (which is expanded and has Network selected), GSM, LoRa, UPnP, System Setting, and Logout. The Network setting is highlighted with a red box. The main right panel is titled 'Network' and contains two radio button options: 'Obtain an IP address automatically (DHCP)' (selected) and 'Use the following IP address'. Below these are input fields for IP Address (192.168.1.123), Subnet Mask (255.0.0.0), Default Gateway (0.0.0.0), Default DNS 1 (0.0.0.0), and Default DNS 2 (0.0.0.0). A dropdown for 'DNS Flush Period' is set to 'Disable'. At the bottom are OK and Reset buttons. A copyright notice at the bottom right reads '© 2011-2023 Climax Tech. Co., Ltd.'

- **Obtain an IP address automatically (DHCP)**

If DHCP is selected, the Network will obtain an IP address automatically with a valid Network DHCP Server. Therefore, manual settings are not required.

This is only to be chosen if your Network environment supports DHCP. It will automatically generate all information.

- **Use following IP address**

You can also enter the Network information manually for IP Address, Subnet Mask, Default Gateway, Default DNS 1 and Default DNS 2.

Please make sure that you have obtained all required values according to your Network environment. Please contact your network administrator and/or internet service provider for more information.

- **DNS Flush Period**

You can set the system to clear current DNS resolution records for all entered URL settings (Reporting, Upload, XMPP...etc.) after a set time period. The system will then resolve the Domain Name again and acquire new IP address for the URL settings. This function is disabled by default.

## 7.3. LoRa Setting

This is for you to configure the connected LoRa dongle.

The screenshot shows the Climax software interface for managing a LoRa setting. The left sidebar has a tree view with nodes like Home, Panel, History Records, Event Log, Panel Setting, PIN Code, PIN Code (NEW), Captured Events, Reported Events, Device History, Device Management, Network Setting, System Setting, and Logout. The Network Setting node is currently selected. The main right panel is titled "LoRa Setting". It contains several configuration fields: "Enable LoRa" with a dropdown menu showing "Disable" (selected), "APP KEY" with the value "AE3D87F1781A93DC6402318DAC982197", "APP EUI" with the value "0101010101010101", "Device EUI" (empty), "Dongle version" (Status: Fail), and "RSSI (dbm)" with the value "0". At the bottom right are two buttons: "OK" and "Reset".

- **Enable LoRa:** Choose to either enable or disable the dongle.
- **APP KEY:** enter the authentication key that is used to grant access and authorize a specific application to communicate with the security panel.
- **APP EUI:** enter the App EUI, which is an extended unique identifier assigned to an application or device in the LoRaWAN protocol.

After finish all setting, click **OK** to confirm change.

## 7.4. UPnP

UPnP is Universal Plug and Play, which opens networking architecture that leverages TCP/IP and the Web technologies to enable seamless proximity networking in addition to control and data transfer among networked devices in the home, office, and public spaces.

The screenshot shows the Climax device's web-based configuration interface. The left sidebar contains a navigation menu with the following items:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- PIN Code (NEW)
- Captured Events
- Reported Events
- Device History
- Device Management
- Network Setting
  - GSM
  - Network
  - LoRa
  - UPnP
- System Setting
- Logout

The "UPnP" item under "Network Setting" is highlighted with a red box. The main content area is titled "UPnP" and contains two checkboxes:

- Enable UPnP Device.
- Enable UPnP Port Redirect.

Below these checkboxes is a section titled "Port Forwarding" with the following settings:

Application	Web Server
Local Port	80
External Port	8080
Protocol	TCP

At the bottom of the "Port Forwarding" section are two buttons: "OK" and "Reset".

- **Enable UPnP Device:**

When enabled, you will be able to see this device via any UPnP discovery tool

- **Enable UPnP Port Redirect:**

The device will try to find an UPnP-supported router and set up the port to redirect to the router.

- **Port Forwarding:**

Port forwarding function allows you to configure specific communication ports to be routed to your system over the Internet for users to access their IP camera(s) remotely.

1. **Local Port:** type 80.
2. **External Port:** type 8080.
3. **Protocol:** type TCP.

After port forwarding has been set up, the router will forward incoming requests on port that your IP Camera users. To set up port forwarding on your router, please refer to your router's instruction manuals for detail.

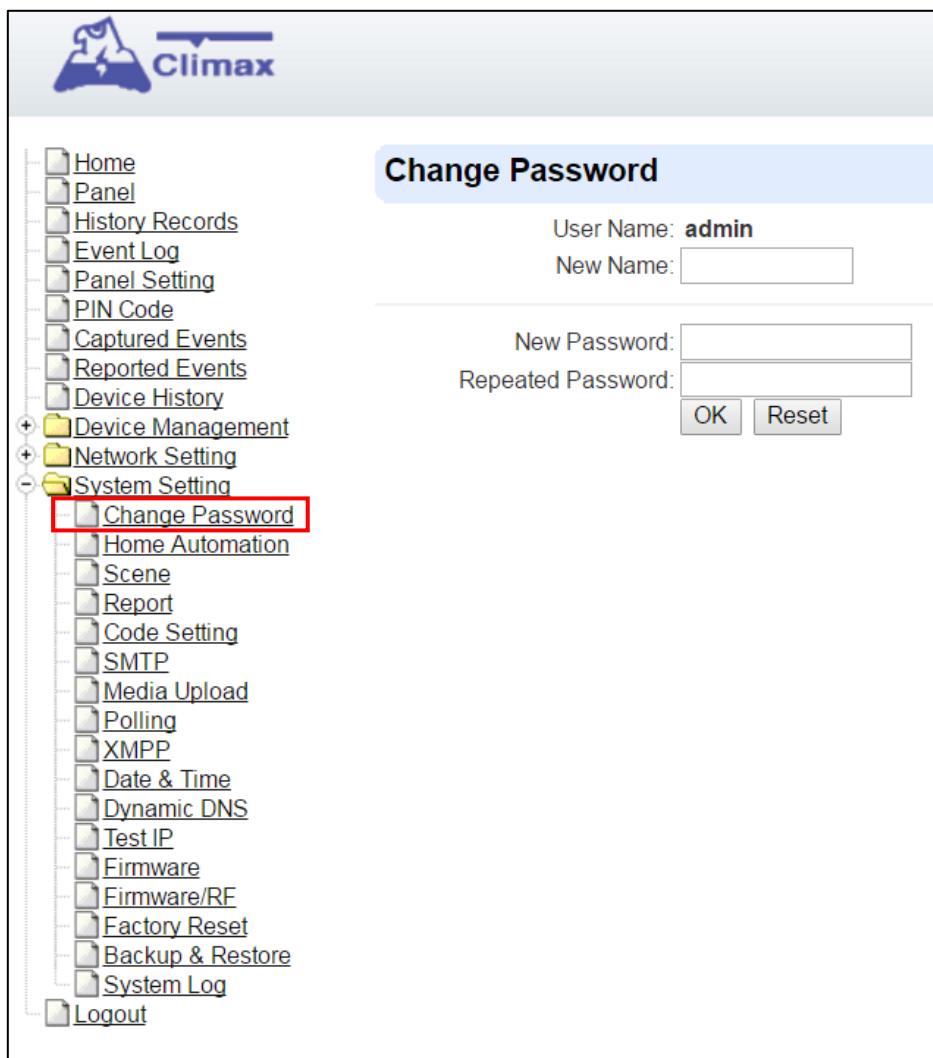

## 8. System Settings

### 8.1. Administrator Setting

For setting new Administrator Log-in Name and Password. Please note both User Name and Password are **case sensitive**.

**Step 1.** Enter the preferred **User Name**.

**Step 2.** Enter the preferred **Password** in the “New Password” field and repeat the same Password in the **Repeat Password** field.

## 8.2. Home Automation

It is used to set Home Automation rules to control sensors and home appliances. You can set up to 100 rules.

- Step 1.** Select an operation area.
- Step 2.** Set a rule condition.
- Step 3.** Set a rule schedule.
- Step 4.** Select the corresponding action rules in the **Execution** field.
- Step 5.** Click **Done** to complete setting.

#	Area	Rule Condition	Rule Schedule	Execution	
1	1	Empty	Always	Empty	<b>Done</b>
2		Empty	Always	Empty	
3		Empty	Always	Empty	
4		Empty	Always	Empty	
5		Empty	Always	Empty	
6		Empty	Always	Empty	
7		Empty	Always	Empty	
8		Empty	Always	Empty	
9		Empty	Always	Empty	
10		Empty	Always	Empty	
11		Empty	Always	Empty	
12		Empty	Always	Empty	
13		Empty	Always	Empty	
14		Empty	Always	Empty	
15		Empty	Always	Empty	
16		Empty	Always	Empty	
17		Empty	Always	Empty	
18		Empty	Always	Empty	
19		Empty	Always	Empty	
20		Empty	Always	Empty	
21		Empty	Always	Empty	
22		Empty	Always	Empty	
23		Empty	Always	Empty	
24		Empty	Always	Empty	
25		Empty	Always	Empty	
...		Empty	Always	Empty	

- **Area**

Select an operation area.

- **Rule Condition**

The rule condition determines under which circumstances the rule should be activated.

- ☞ **Empty** : When set as **Empty**, the system will follow the schedule time and execution rule to respond accordingly.
- ☞ **Trigger Alarm** : When set as **Trigger Alarm**, if the specified alarm event (Burglar/Smoke/Medical/Water/Silent Panic/Panic/Emergency/Fire/CO Alarm/Gas/Heat) or any alarm is triggered, the rule will be activated according to rule schedule and execution setting.

- ☞ **Mode Change** : When set as **Mode Change**, when the system enters specified mode,

the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Mode Change". Below it, a sub-menu is open with the option "Disarm" selected. The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Mode Change and Exit Timer Stopped**: When set as **Mode Change and Exit Timer Stopped**, when the system changes mode to and Exit Delay Timer expires, , the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Mode Change And Exit Timer Stopped". Below it, a sub-menu is open with the option "Full Arm" selected. The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Mode Start Entry Timer** : When set as **Mode Start Entry Timer**, when the system begins to countdown Entry Delay, the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Mode Start Entry Timer". Below it, a sub-menu is open with the option "Full Arm" selected. The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Temperature Below** : When set as **Temperature Below**, if the temperature detected by specified temperature sensor drops below set threshold, the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Temperature Below". Below it, a sub-menu is open with the option "Zone 1" selected, showing a value of "28 °C". The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Temperature Above** : When set as **Temperature Above**, if the temperature detected by specified temperature sensor exceeds set threshold, the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Temperature Above". Below it, a sub-menu is open with the option "Zone 1" selected, showing a value of "26 °C". The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Temperature Between** : When set as **Temperature Between**, if the temperature detected by specified temperature sensor falls within the range specified, the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Temperature Between". Below it, a sub-menu is open with the option "Zone 1" selected, showing a range from "25 °C" to "28 °C". The interface has a light blue background and standard Windows-style UI elements.

- ☞ **High Power Consumption** : When set as **Power Consumption Above**, if the power output watt from a specific Power Switch exceeds, the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Power Consumption Above". Below it, a sub-menu is open with the option "Zone 1" selected, showing a value of "1000W". The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Humidity Above** : When set as **Humidity Above**,if the humidity reading from specified room sensor rises above the level specified, the rule will be activated according to rule schedule and execution setting.

A screenshot of a software interface showing a dropdown menu labeled "Humidity Above". Below it, a sub-menu is open with the option "Zone 1" selected, showing a value of "0%". The interface has a light blue background and standard Windows-style UI elements.

- ☞ **Humidity Below** : When set as **Humidity Below**,if the humidity reading from specified room sensor falls below the level specified, the rule will be activated according to rule schedule and execution setting.

- ☞ **LUX Between** : When set as **LUX Between**, if the lux reading from specified light sensor falls below the level specified, the rule will be activated according to rule schedule and execution setting.

- ☞ **Random** : The **Random** condition must be used along with Rule Schedule setting. Set a percentage from 1 to 10%. When the panel time reaches programmed Rule Schedule time. The Panel will activate rule according to set chance.

**Example:** If set as 10%, whenever the panel reaches programmed Rule Schedule time, there will be a 10% chance the rule is activated.

## ● Rule Schedule

- ☞ **Always** : When set as **Always**, the rule can be activated anytime.
- ☞ **Once** : When set as **Once**, the system will follow the rule condition and execute rule according to the exact date and time specified..

- ☞ **Every Month** : When set as **Every Month**, the system will follow the rule condition and execute rule according to date and time specified every month.

- ☞ **Every Week** : When set as **Every Week**, the system will follow the rule condition and execute rule according to day of the week and time specified every week.

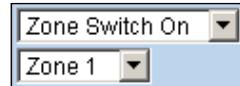

- ☞ **Every Day** : When set as **Every Day**, the system will follow the rule condition and execute rule according to time specified every day

## ● Execution

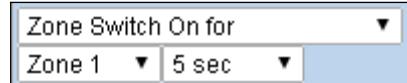

Execution is the actual action performed by Control Panel when both Rule Condition and Rule Schedule requirements are met

- ☞ **Zone Switch Off:** Turn on the Power Switch at specified zone.

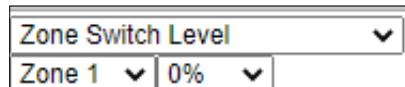

- ☞ **Zone Swith On** : Turn on the Power Switch at specified zone.

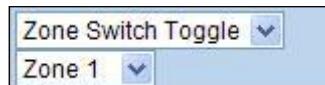

- ☞ **Zone Swith On For** : Turn on the Power Switch at specified zone for a set duration.

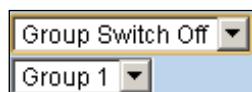

- ☞ **Zone Swith Level**: Change the power output level for Dimmer at specified zone.

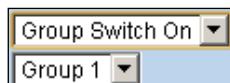

- ☞ **Zone Swith Toggle** : Toggle on/off the Power Switch at specified zone.

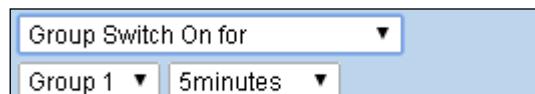

- ☞ **Group Switch Off**: Turn off all Power Switches assigned to specified group.

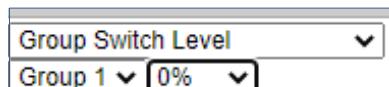

- ☞ **Group Switch On**: Turn on all Power Switches assigned to specified group.

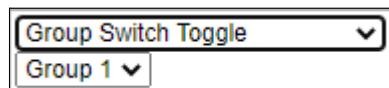

- ☞ **Group Switch On For**: Turn on all Power Switches assigned to specified group for a set duration.

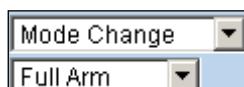

- ☞ **Group Switch Level**: Change the power output level for Dimmer at specified group.

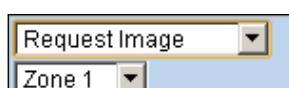

- ☞ **Group Switch Toggle**: Toggle on/off the Power Switch at specified group.

- ☞ **Mode Change**: The system will change to the mode as you specified.

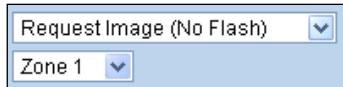

- ☞ **Request Image**: The PIR Camera in specified zone will take a picture.

- ☞ **Request Image (All)**: All PIR Cameras in the system will take a picture.

- ☞ **Request Image (No Flash)**: The PIR Camera in specified zone will take a picture without activating its LED flash.

- ☞ **Request Image (All, No Flash)**: All PIR Cameras in the system will take a picture without activating LED Flash.

- ☞ **Request Video**: The PIR Video Camera or IP Camera in specified zone will record a video.

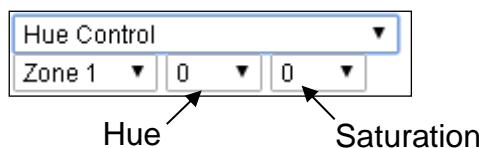

- ☞ **Request Video (All)**: All PIR Video Cameras and IP Cameras in the system will record a video.

- ☞ **Setup UPIC**: The UPIC and specified zone will transmit Off/Heat/Cool command to the air conditioner as programmed.

- ☞ **Hue Control**: Adjust the hue and saturation of the Philips Hue at sepecified zone as programmed.

- ☞ **Trigger Alarm**: Choose to activate one of the following alarms: High Temperature Alarm, Low Temperature Alarm, High Power Consumption Alarm, High Humidity Alarm and Low Humidity Alarm

- ☞ **Apply Scene**: the system will execute preprogrammed Scene number. Please refer to **8.3. Scene** for detail.

## 8.3. Scene

The Scene setting allows you to customize a series of actions with your devices, such as Power Switch control, image/video request, mode change and trigger alarm. The programmed scene can be set to activated when a device is triggered. (See **5.1.3. Edit Devices**), or when a Home Automation Rule is executed. (See **8.2. Home Automation**) For example, you can set a scene to control multiple lightings, then set your Remote Controller to activate the scene when the button is pressed, or set a Home Automation Rule to activate the scene.

#	Name	#	Area	Execution
1	Empty	1	1	Empty
		2	1	Empty
		3	1	Empty
		4	1	Empty
		5	1	Empty
2	Empty	1	1	Empty
		2	1	Empty
		3	1	Empty
		4	1	Empty
		5	1	Empty
3	Empty	1	1	Empty
		2	1	Empty
		3	1	Empty
		4	1	Empty
		5	1	Empty
4	Empty	1	1	Empty
		2	1	Empty
		3	1	Empty
		4	1	Empty
		5	1	Empty

**Step 1.** Click on **Edit**.

#	Name	#	Area	Execution
1		1	1 ▾	Empty ▾
		2	1 ▾	Empty ▾
		3	1 ▾	Empty ▾
		4	1 ▾	Empty ▾
		5	1 ▾	Empty ▾

**Step 2.** Enter a name for the scene.

**Step 3.** Select an Area

**Step 4.** Select an action to be executed when the scene is activated. Refer to the Rule Execution section in **8.2. Home Automation** for detail.

**Step 5.** Repeat Step 2-3 to setup the execution you wanted. As many as 5 executions can be

included in one scene.

**Step 6.** Click “**Done**”.

**Step 7.** Click “**OK**” at bottom of webpage to confirm the new scene setting..

## 8.4. Reporting

This is used for installer to program/ set all requirements for reporting purposes.

The screenshot shows the Climax device configuration interface. On the left is a navigation tree with the following items:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- Device Management
- Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report** (This item is highlighted with a red box)
  - Code Setting
  - SMTP
  - Media Upload
  - Polling
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP
  - Firmware
  - Firmware/RF
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

The main area is titled "Report" and contains a table with 20 rows. The columns are:

#	Reporting URL	Level	Group 1	Group 2	Group 3	Group 4	Group 5
1		All events	●	○	○	○	○
2		All events	●	○	○	○	○
3		All events	●	○	○	○	○
4		All events	●	○	○	○	○
5		All events	●	○	○	○	○
6		All events	●	○	○	○	○
7		All events	●	○	○	○	○
8		All events	●	○	○	○	○
9		All events	●	○	○	○	○
10		All events	●	○	○	○	○
11		All events	●	○	○	○	○
12		All events	●	○	○	○	○
13		All events	●	○	○	○	○
14		All events	●	○	○	○	○
15		All events	●	○	○	○	○
16		All events	●	○	○	○	○
17		All events	●	○	○	○	○
18		All events	●	○	○	○	○
19		All events	●	○	○	○	○
20		All events	●	○	○	○	○

At the bottom of the table, there are five buttons labeled "Essential" and "5 Retry".

### ● Reporting URL

This is used for installer to program report destinations.

#### 1 Climax CID protocol via IP

Format: ip://(Account Number)@(server ip):(port)/CID

Example: ip://1234@54.183.182.247:8080/CID

#### 2 SIA DC-09 protocol via IP

Format: ip://(Account Number)@(server ip):(port)/SIA

Example: ip://1234@54.183.182.247:8080/SIA

#### 3 SIA DC-09 protocol via IP with AES encryption

Format: ip//(Account Number)@(server ip):(port)/SIA/KEY/(128,196 or 256 bits Key)

Example:

ip://1234@54.183.182.247:8080/SIA/KEY/ 4A46321737F890F654D632103F86B4F3

#### 4 SIA DC-09 protocol using CID event code via IP

Format: ip://(Account Number)@(server ip):(port)/CID\_SIA

Example: ip://1234@54.183.182.247:8080/CID\_SIA

#### 5 SIA DC-09 protocol using CID event code via IP, with HEX encryption.

Format: ip//(Account Number)@(server ip):(port)/CID\_SIA/KEY/(HEX)

Example:

ip://1234@54.183.182.247:8080/CID\_SIA/KEY/4A46321737F890F654D632103F86B4

F3

## 6 CSV protocol via IP

Format: ip//(Account Number)@(server ip):(port)/CSV

Example: ip://1234@54.183.182.247:8080/CSV

## 7 CSV protocol via IP including username and password

Format: ip//(Account Number)@(server ip):(port)/CSV/User/Password

Example: ip://1234@54.183.182.247:8080/CSV/abcd/1357

## 8 Email

Format: mailto:user@example.com

Example: mailto:john@gmail.com

### ● Level

Select a reporting condition:

All events: The system will report all events to this destination.

Alarm events: The system will only report alarm event to this destination.

Status events: The system will only report status event(non-alarm events) to this destination.

### ● Group

Select a group for your report destination The system will make report according to the following principle:

- ☞ Group with higher priority will be reported first: Ex: Group 1 → Group 2 → Group 3...
- ☞ If reporting to the first destination in a group fails, the system will move on to the next report destination in the group.
- ☞ If reporting to one of the report destinations in a group is successful, the system will consider reporting to this group successful and stop reporting to rest of the destinations in the group. It will then move on to report to the next group.
- ☞ If reporting to all destinations in a group fails, the system will retry report to group according to retry times set below. If reporting is still unsuccessful after retries, the system will move on to report the the next group according to Essential/Optional setting below.
- ☞ After completing a round of reporting (From Group 1 → Group 2 ..... →Group5), If there is any group set as Essential which has not received report successfully, the system will restart the reporting cycle to retry reporting until every group set as Essential is reported successfully.

### ● Essential/Optional

Essential: the system will report to all groups set as **Essential**. The system will never give up trying to report to any group set as Essential until at least one of the destinations in every Essential group successfully receives the report. Group 1 is always set as **Essential** and cannot be changed.

Optional: The system will only report to group set as **Optional** when reporting to its previous group fails. For example: if Group 3 is set is optional, the Control Panel will only report to Group 3 if reporting to Group 2 fails.

### ● 1 Retry/ 3 Retry/ 5 Retry/ 10 Retry/ 99 Retry:

If reporting to all destinations in a group fails, the system will retry reporting to the group according to the retries times set here.

**<NOTE>**

- When the panel is registered into Climax's Home Portal Server, URL1 will be filled in with Home Portal Server report information. Do not change the information once registration is complete or reporting to Home Portal Server may encounter error.
- After registering the panel in Home Portal Server, if you wish to set more reporting destination, the new report destination should be set to different group than URL1 otherwise it may not be able to receive report successfully.

## 8.5. SMS Report

The control panel may be configured to send an SMS notification to a designated recipient. You may configure the URL and level setting where the security panel sends its reports via SMS.

The screenshot shows the Climax control panel interface. On the left is a navigation tree with the following items:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- PIN Code (NEW)
- Captured Events
- Reported Events
- Device History
- Device Management
- Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - SMS Report
  - Test Report
  - Code Setting
  - SMTP
  - Media Upload
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP
  - Firmware
  - Firmware/RF
  - Firmware/OMCU
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

The main content area is titled "SMS Report". It contains a table with two columns: "Reporting URL" and "Level". There are five rows in the table, each with a text input field for the URL and a dropdown menu for the level. The dropdown menu is set to "All events" for all five rows. Below the table is a note with two options:

Note: 1. Report via SMS in CID format, ex: sms://ACCT@telephone  
2. Report via SMS text, ex: sms://ACCT@telephone/TEXT

At the bottom of the page are "OK" and "Reset" buttons, and a copyright notice: © 2011-2023 Climax Tech. Co., Ltd.

- **Reporting URL**

Enter the URL where the security panel sends its reports via SMS.

- **Level**

Configure the type of events in which the security panel sends its reports via SMS.

**All events:** panel will send SMS reports for all types of events

**Alarm (w/o mode change) event:** only alarm events that do not involve a change in the security panel's mode will trigger an SMS report.

**Alarm (with mode change) event:** only alarm events that involve a change in the security panel's mode will trigger an SMS report.

**Status event:** panel to send SMS reports specifically for status events

## 8.6. Test Report

Test report allows you to generate a test message or report to verify the functionality of the SMS reporting system. Select the URL you have previously configured to send the test report message.

The screenshot shows the Climax device management interface. At the top left is the Climax logo. On the left is a vertical navigation menu with the following items:

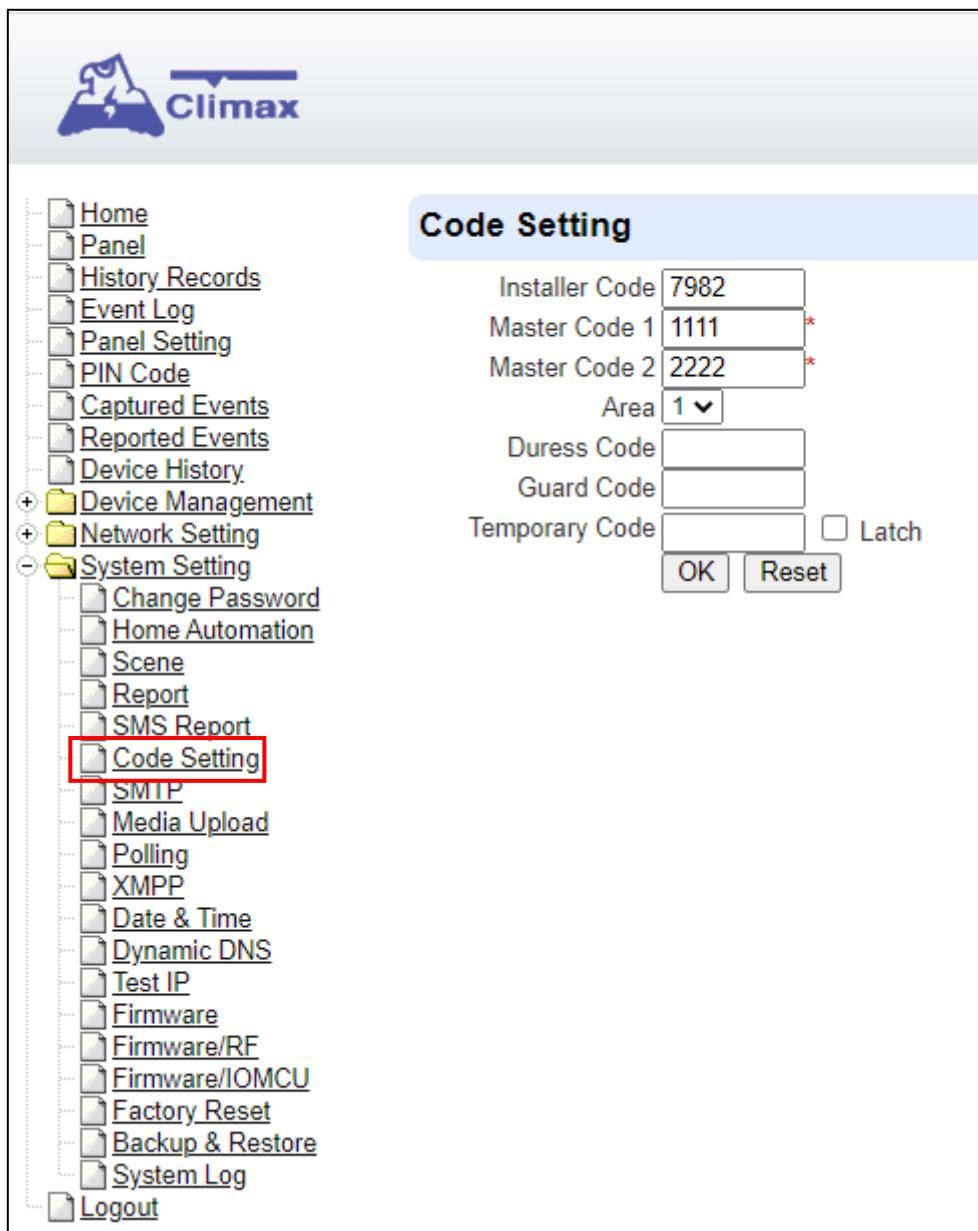

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- PIN Code (NEW)
- Captured Events
- Reported Events
- Device History
- + Device Management
- + Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - SMS Report
  - Test Report
  - Code Setting
  - SMTP
  - Media Upload
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP
  - Firmware
  - Firmware/RF
  - Firmware/OMCU
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

In the center, the title "Test Report" is displayed above a form field labeled "URL:" with a dropdown arrow and a "Send" button. In the bottom right corner of the main area, there is a copyright notice: "© 2011-2023 Climax Tech. Co., Ltd".

## 8.7. Code Settings

The Duress Code, Master Code & Temporary Code adds the flexibility of different security level for operation in **Code Settings** menu.

- Step 1.** Key in your preferred 4-6 digit **Installer Code**, **Duress Code**, **Master Code**, and/or **Temporary Code**.

- Step 2.** You can also choose to have Latch Option On / Off for Temporary Code by tick the Latch Option box and press **OK** to confirm the settings.

- **Installer Code**

The Installer Code is used for SMS Remote Programming, when sending a remote programming message, the user needs to enter Installer Code in the message to be able to program the system. The default Installer code is: **7982**.

- **Master Code**

The default Master Code for Area 1 and Area 2 are: 1111 and 2222 respectively.

- **Area**

Each Area has different Duress Code, Master Code, and Temporary Code. Select the Area

to program the code setting in this area.

- **Duress Code**

The Duress Code is designed for transmitting a secret & silence alarm.

When Duress Code is used for accessing the system, the Control Panel will report a secret alarm message without sounding the siren to the Central Monitoring Station to indicate of a **Duress Situation in Progress**.

The Duress Code consists of 4-6 digits and is not activated as default by the factory.

- **Guard Code**

The Guard Code is designed for security patrol personnel to arm/disarm the system. It can be set the same as a User PIN Code.

The Guard Code consists of 4-6 digits and is not activated as default by the factory.

- **Temporary Code**

Temporary Code is also used to arm/disarm the system, but it is for a temporary user. The temporary Code is **ONLY** valid for one-access per arming and disarming. Afterwards, the Temporary Code will be automatically erased and needs to be reset for a new Temporary user.

The Temporary Code consists of 4-6 digits and is not activated as default by the factory.

- **Latch Option**

This is to program the Latch Key Reporting feature for Temporary Code. Please click the box to select the options.

**Latch → Latch Report ON** = Whenever the system is armed, home/ day home/ night home armed or disarmed, the Panel will transmitt Contact ID code / SMS message / GPRS reporting (according to pre-setting) to notify the Central Monitoring Station.

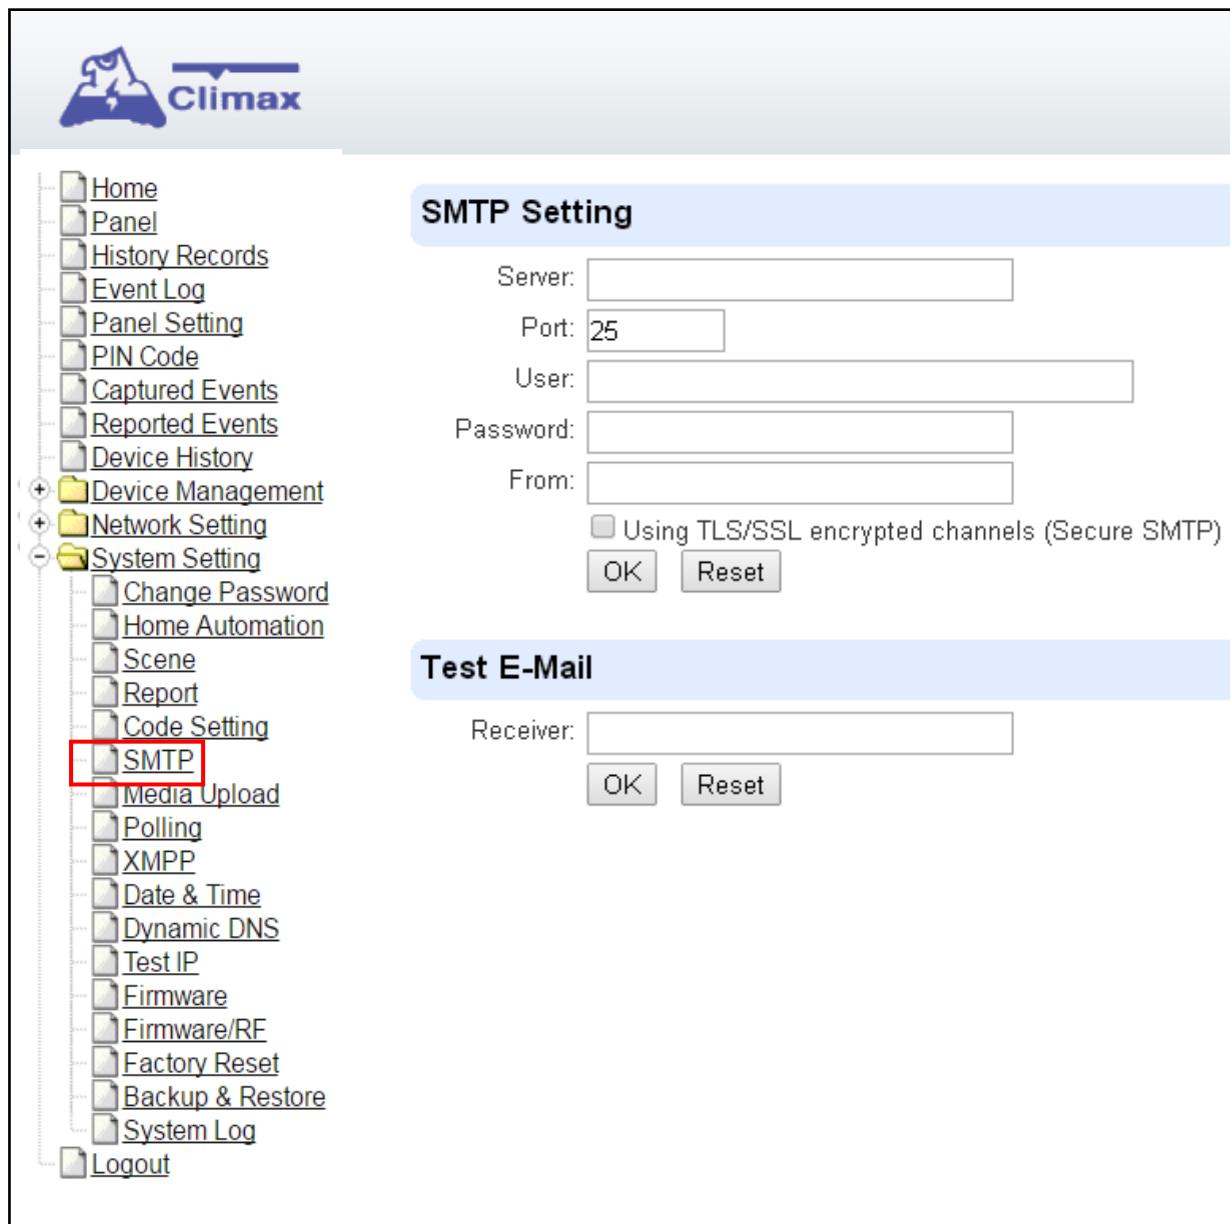

**Latch → Latch Reprot OFF** = Whenever the system is armed, home/ day home/ night home armed or disarmed, the Panel will NOT transmit reporting(s) to notify the Central Monitoring Station.

- **Delete**

Except Master Code which can't be disabled in any way, Temporary and Duress Code can be disabled by cleaning the code box and leaving the box as blank.

## 8.8. SMTP Setting

Program the mail server related settings. The email account you set here would be used to send report for events or picture and video clip captured by PIR Camera and PIR Video Camera.

**Step 1.** Enter the following settings:

- **Server:** set the mail server (max. 60 digits/alphabets).
- **Port:** set the port number (max. 5 digits/alphabets).
- **User:** set the mail account name (max. 30 digits/alphabets).
- **Password:** set the password corresponding to the mail account name (max. 30 digits/alphabets).
- **From:** set the email address according to your mail sever and account name. If your mail server supports other email address, you can enter the email address here. (max. 30 digits/alphabets).
- **Using TLS/SSL encrypted channels (Secure SMTP):** If your mail server uses TLS or SSL encryption method for secure transfer, please click the box to enable the setting

**Step 2.** Click **OK** to confirm the setting.

## 8.9. Media Upload

The system can deliver captured images and video clips captured by PIR Cameras and PIR Video Camera to cell phone, email or FTP.

Media Upload

URL 1:

URL 2:

URL 3:

URL 4:

URL 5:

Prefix:

Account number (for FTP):

Alarm only (for FTP):

Delete events after uploaded.  
Note: 1. Upload via IP (Ethernet or GPRS) in FTP protocol, ex: <ftp://user:password@server/path>  
2. Upload via IP (Ethernet or GPRS) in HTTP protocol, ex: <http://server/path>  
3. Mail via IP (Ethernet or GPRS), ex: mailto: user@server  
4. Manitou via IP (Ethernet or GPRS), ex: manitou://user@server:port  
5. Send MMS e-mail via GPRS, ex: mms: user@mail.server  
6. Send MMS via GPRS, ex: mms: telephone

© 2011-2023 Climax Tech. Co., Ltd.

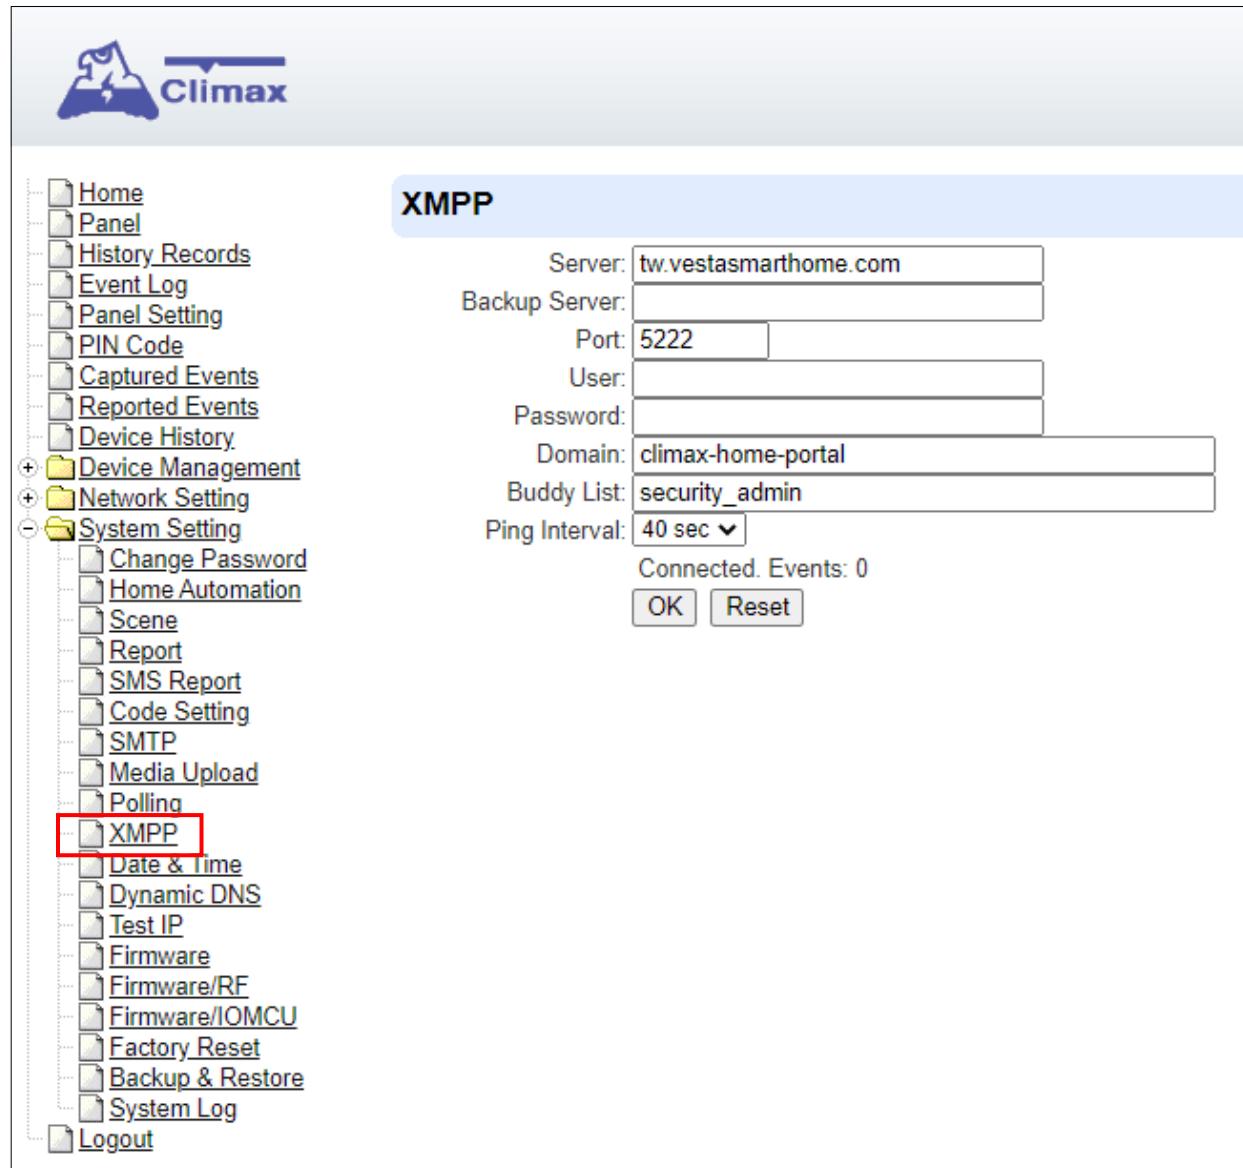

- **FTP:** <ftp://user.password@server/path>
- **HTTP:** <http://ip:port/path>
- **Email:** <mailto:user@server> (transmitting an alarm image over Ethernet)
- **Manitou:** <manitou://user@server:port>
- **MMS via Telephone:** mms: telephone number
- **MMS via GPRS:** mms: [user@mail.server](mailto:user@mail.server) (transmitting an alarm image over MMS)
- **Account number (for FTP):** refers to the account number used for FTP (File Transfer Protocol) uploads, where special names can be added to the filenames.
- **Alarm only (for FTP):** this is for users to decide whether all photos should be uploaded via FTP or only the ones related to alarms.

### <NOTE>

- If “**Deleted events after uploaded**” is checked, the system will automatically clear all captured images which are displayed in the Captured Events menu after it successfully sends out those captured images to preset reporting destinations.

## 8.10. XMPP

XMPP setting enables the Control Panel to query the set destination. This setting is required for the Control Panel to connect to Climax's Home Portal Server for remote control. If the panel is disconnected from the server, it will retry connection every 3 minutes.

- **Server:** server address (dependent upon default firmware)
  - US server: us.vestasmarthome.com
  - EU server: eu.vestasmarthome.com
  - Taiwan server: tw.vestasmarthome.com
- **Port:** server's port number
- **User:** authorized user account name
- **Password:** authorized user password
- **Domain:** domain address
- **Buddy List:** contact destination
- **Ping Interval:** server connection test interval

## 8.11. Date & Time

Program the current **Date & Time** and set automatic synchronization with internet time server.

The screenshot shows the Climax web interface with a sidebar menu on the left and three main configuration tabs on the right: Date & Time, Time Zone, and Internet Time.

- Date & Time:** Set Date to 2014/05/08 and Time to 11 : 43. Buttons: OK, Reset.
- Time Zone:** Set Time Zone to (GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London. Buttons: OK, Reset.
- Internet Time:** Check box: Automatically synchronize with an Internet time server. Server: pool.ntp.org. Buttons: OK, Reset.

©2014 Climax Tech. Co., Ltd.

**Sidebar Menu:**

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- Device Management
- Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - Code Setting
  - SMTP
  - Media Upload
  - Polling
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP
  - Firmware
  - Firmware/RF
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

- **Date & Time:** set current month, date and time.
- **Time Zone:** choose your time zone, and then the system will calculate the daylight saving time automatically (if necessary).
- **Internet Time:** the system will automatically synchronize with an internet time server. Tick the check box to enable this function. Available options: [time1.google.com](http://time1.google.com), [pool.ntp.org](http://pool.ntp.org), [time.nist.gov](http://time.nist.gov) and [tick.usno.navy.mil](http://tick.usno.navy.mil).

## 8.12. Dynamic DNS

This page is used to provide you the Control Panel's current public IP address.

The screenshot shows the Climax Control Panel interface. At the top left is the Climax logo. On the left is a vertical navigation menu with the following items:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- + Device Management
- + Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - Code Setting
  - SMTP
  - Media Upload
  - Polling
  - XMPP
  - Date & Time
  - Dynamic DNS** (this item is highlighted with a red box)
  - Test IP
  - Firmware
  - Firmware/RF
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

The main content area has a title "Dynamic DNS". It displays the "Dynamic DNS Server" field with the value <http://checkip.dyndns.org>. Below it, it says "Your public IP address is: 59.124.230.221". At the bottom are "OK" and "Reset" buttons.

- **Dynamic DNS Server:** <http://checkip.dyndns.org>

## 8.13. Test IP

This is for you to test the Control Panel internet connection.

The screenshot shows the Climax Control Panel interface. On the left is a navigation tree:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- + Device Management
- + Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - Code Setting
  - SMTP
  - Media Upload
  - Polling
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP** (highlighted with a red box)
  - Firmware
  - Firmware/RF
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

In the center, a blue header bar says "Test IP". Below it is a form:

URL:

Interval:  (sec, 0~99999)  
Ex: ip://server:port/path (via Ethernet)

**Step 1.** Enter the URL destination you want to test connection to.

**Step 2.** Enter the test interval.

**Step 3.** Click "OK"

You can check the test connect result in **System Log**.

## 8.14. Firmware Upgrade

You can update the firmware via this web page.

**Step 1.** Click on “**Choose File**” and locate the latest firmware file in your PC.

The screenshot shows the Climax Control Panel interface. On the left is a navigation tree with the following structure:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- + Device Management
- + Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - SMS Report
  - Code Setting
  - SMTP
  - Media Upload
  - Polling
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP
  - Firmware
  - Firmware/RF
  - Firmware/OMCU
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

A red box highlights the "Firmware" link under the System Setting section.

The main content area is titled "Firmware Upgrade". It contains the following text:

This page applies a firmware update to your alarm panel. You should only apply updates with the correct firmware.

Your current firmware version is: GL 0.0.2.23

Firmware File:  未選擇任何檔案

To locate the correct file, click on the browse file button and find the directory you downloaded it to. Click on the file and then OK. When the filename appears in the box, click the apply button. DO NOT interrupt the update process.

© 2011-2020 Climax Tech. Co., Ltd.

**Step 2.** Press “**Apply**” to upload the latest firmware to Control Panel

**Step 3.** Wait for 1 min and do NOT power off during this time.

**Step 4.** Once Firmware upgrading is complete, the Control Panel will reboot automatically

## 8.15. RF Firmware Upgrade

You can update the Control Panel's RF firmware via this web page.

- Step 1.** Click on “**Choose File**” and locate the latest firmware file (“**unzipped image.bin**” file) in your PC.

The screenshot shows the Climax Control Panel interface. On the left is a navigation tree:

- Home
- Panel
- History Records
- Event Log
- Panel Setting
- PIN Code
- Captured Events
- Reported Events
- Device History
- Device Management
- Network Setting
- System Setting
  - Change Password
  - Home Automation
  - Scene
  - Report
  - SMS Report
  - Code Setting
  - SMTP
  - Media Upload
  - Polling
  - XMPP
  - Date & Time
  - Dynamic DNS
  - Test IP
  - Firmware
  - Firmware/RF** (highlighted with a red box)
  - Firmware/IOMCU
  - Factory Reset
  - Backup & Restore
  - System Log
- Logout

The main content area is titled “RF Firmware Upgrade”. It contains the following text:

This page applies a firmware for RF update to your alarm panel. You should only apply updates with the correct firmware.  
Your current firmware version is: BG\_U-ITR-F1-BD\_BL.A30.20190726

Firmware File:  未選擇任何檔案  
To locate the correct file, click on the browse file button and find the directory you downloaded it to. Click on the file and then OK. When the filename appears in the box, click the apply button. DO NOT interrupt the update process.

© 2011-2020 Climax Tech. Co., Ltd.

- Step 2.** Press “**Apply**” to upload the latest firmware to Control Panel

- Step 3.** Wait for 1 min and do NOT power off during this time.

- Step 4.** Once Firmware upgrading is complete, the Control Panel will reboot automatically

## 8.16. IO MCU Firmware Upgrade

**Step 1.** Click “**Firmware/IOMCU**” to enter this page.

**Step 2.** Click on “**Choose File**” and locate the latest firmware file in your PC.

The screenshot shows the Climax Control Panel interface. At the top left is the Climax logo. The main menu on the left includes: Home, Panel, History Records, Event Log, Panel Setting, PIN Code, Captured Events, Reported Events, Device History, Device Management (with a red box around it), Network Setting, System Setting (with a red box around it), and Logout. The 'Device Management' and 'System Setting' items have sub-menu options listed under them. The central area has a title 'IO MCU Firmware Upgrade'. Below it is a note: 'This page applies a firmware for IO MCU update to your alarm panel. You should only apply updates with the correct firmware.' It also shows the current firmware version: 'Your current firmware version is: U-IO\_BLA01.2020.04.10'. A 'Firmware File' input field contains the placeholder '選擇檔案' (Select File). Below it is a note: 'To locate the correct file, click on the browse file button and find the directory you downloaded it to. Click on the file and then OK. When the filename appears in the box, click the apply button. DO NOT interrupt the update process.' A large 'Apply' button is located at the bottom right of this section. In the bottom right corner of the main area, there is a copyright notice: '© 2011-2020 Climax Tech. Co., Ltd.'

**Step 3.** Press “**Apply**” to upload the latest firmware to Control Panel

**Step 4.** Wait for 1 min and DO NOT power off during this time.

**Step 5.** Once Firmware upgrading is complete, the Panel will reboot automatically.

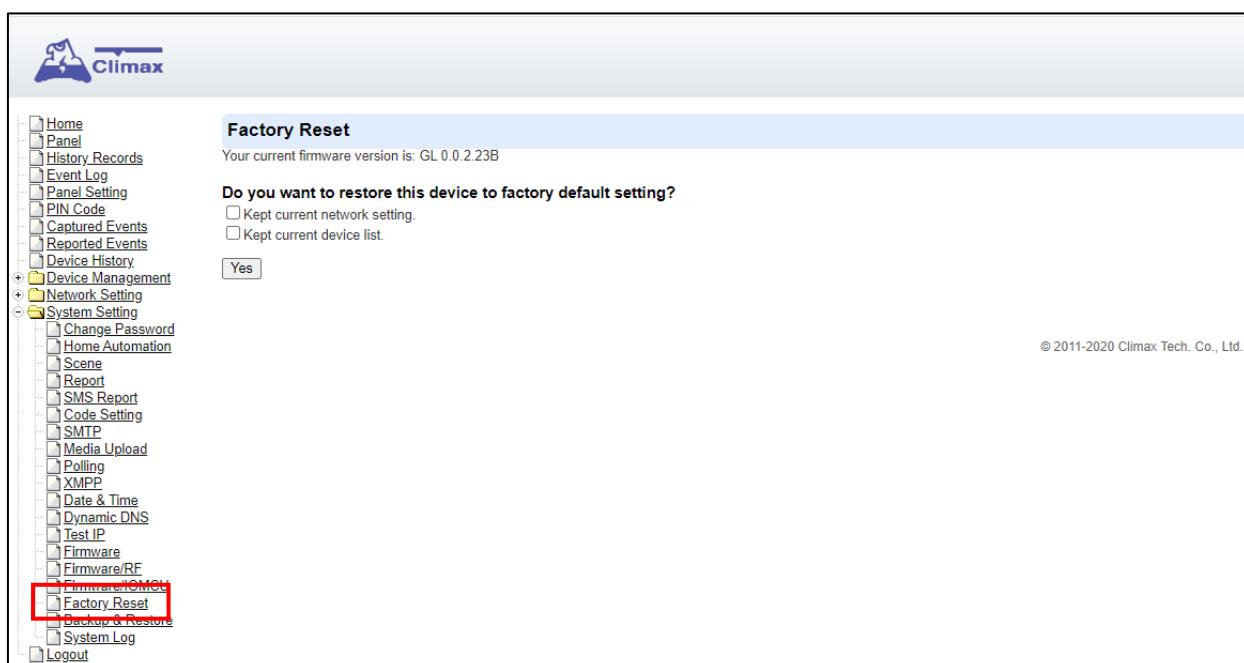

## 8.17. Factory Reset

You can clear all programmed parameters in the Control Panel and reset it to Factory Default.

Once the **Factory Reset** is executed, all the programmed settings will return to its default value, and all the learnt-in devices will be removed. You will need to restart the programming and learning process again.

### 8.17.1 Remote Reset

- Step 1.** Tick the **Kept current network setting** to keep the current Network settings. Otherwise, the system will reset its value back to factory default. Tick the **Kept current device list** box to keep the current learnt-in devices. Otherwise, the system will reset its value back to factory default.
- Step 2.** Press **Yes** to continue the Reset procedure.
- Step 3.** Wait for 1 min and do NOT power off during this time.
- Step 4.** Once reset is complete, it will automatically reboot the main unit.

### 8.17.2 Local Reset

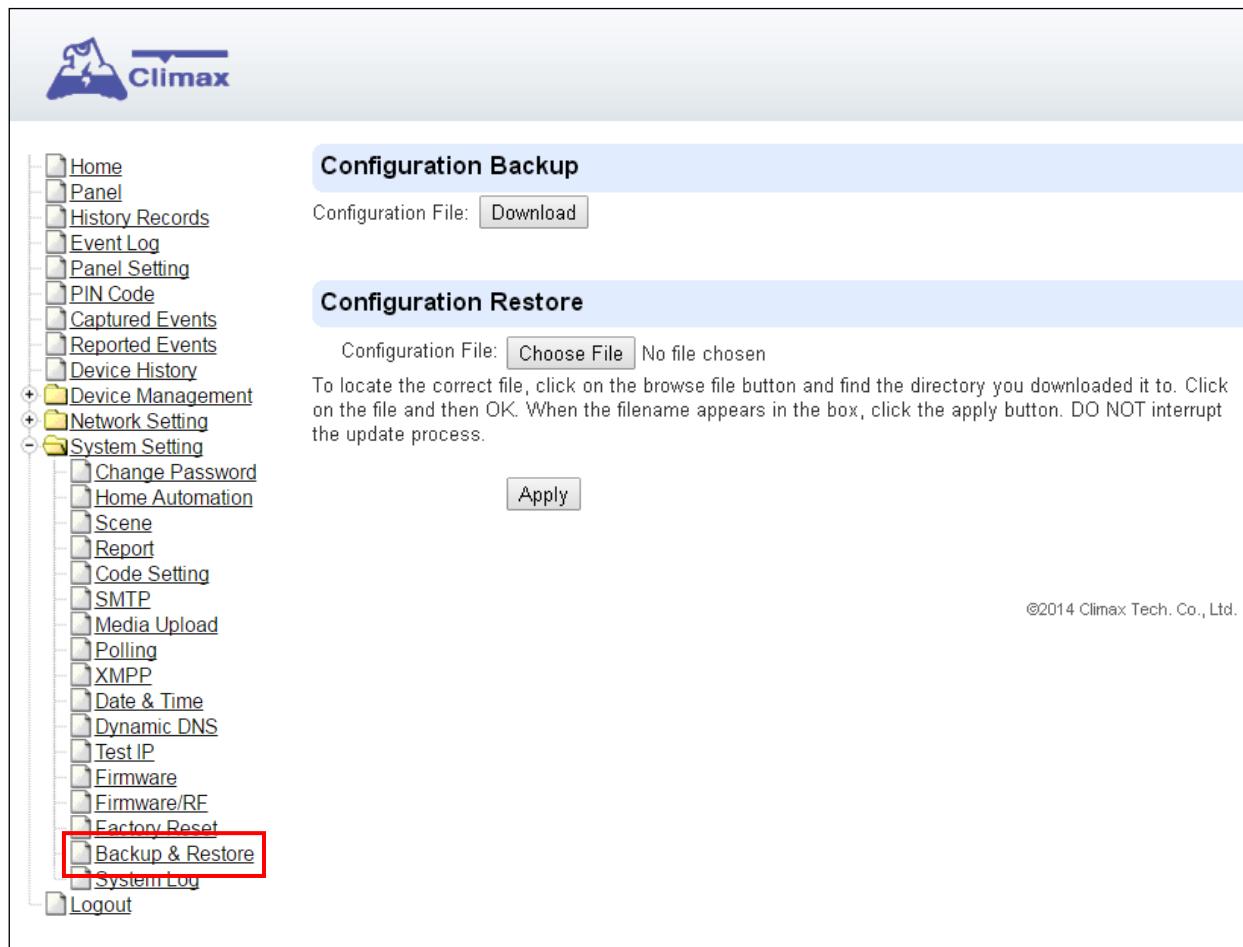

- Step 1.** Slide battery switch to OFF.
- Step 2.** Unplug the power cord of built-in power unit.
- Step 3.** Wait for 3 to 4 seconds for electricity to discharge.
- Step 4.** Press and keep holding the learn button.
- Step 5.** Plug the power cord of built-in power unit back to AC utility.
- Step 6.** Keep holding the learn button until you hear continuous beeps. LED 1 and 2 will light up as green first. Then, LED 3 will light up as orange.
- Step 7.** Release the learn button as the Control Panel has finished rebooting by now.
- Step 8.** Slide battery switch to ON.

## 8.18. Backup & Restore

You can back up all programmed parameters and save these programmed values into a file. Besides, you also can restore pre-programmed settings.

### 8.18.1 Backup Data

Click **Download**, and you can back up all programmed data and save these programmed values into a file.

### 8.18.2 Restore Settings

- Step 1. Click **Choose File**, select a saved file.
- Step 2. Click **Apply** to apply the pre-programmed values to the main unit.

## 8.19. System Log

The system log webpage logs the control panel's detail system operation history.

The screenshot shows the 'System Log' page from the Climax control panel. The left sidebar contains navigation links for Home, Panel, History, Records, Event Log, Panel Setting, PIN Code, Captured Events, Device Control, Device History, Device Management, Network Setting, Network Setting, System Log, Change Password, Home Automation, Scene, Record, SIA/SES Broadcast, Code Setting, SMTP, Media Upload, Date & Time, Dynamic DNS, Tel IP, Firmware, Firmware/RF, Firmware/QMCU, Firmware/Build, and Backup & Restore. The main content area is titled 'System Log' and includes a 'Reload' button. A table lists log entries with columns: Time, Priority, Class, Action, Source, and Message. The table has 19 rows of data. At the bottom, there is a limit dropdown set to 20, a 'System Log File' download button, and a copyright notice: '© 2011-2018 Climax Tech. Co., Ltd.'

Time	Priority	Class	Action	Source	Message

- System Log File Download:** Click to download a detail log files into your computer for more information.

## 9. Event & History

This section introduces event history of the system.

### 9.1. Captured Events

This page stores all captured pictures and videos by PIR Camera and PIR Video Camera. When a PIR Camera is triggered, it will take pictures in quick succession according panel setting, when a PIR Video Camera is triggered, it will take a video clip. You can also request the PIR Camera to take a picture and PIR Video Camera to take a video clip manually.

Captured events will be displayed in this page with their information for you to view. Simply click on the picture or video to view them. You can also click **Delete** to delete the event.

The screenshot shows a web-based interface for managing captured events. On the left is a sidebar menu with various options like Home, Panel, History Records, Event Log, Panel Setting, PIN Code, and Captured Events. The 'Captured Events' option is highlighted with a red box. The main area is titled 'Captured Events' and contains a table with three rows of data. The columns are Time, Area, Zone, Type, Status, Media, and Comment. The first row shows a timestamp of 2012-09-12 16:24:52, Area 1, Zone 10, Type Requested, Status Done, a thumbnail image in the Media column, and a comment 'No Packet Lost;' followed by a 'Delete' link. The second and third rows show similar data for other events on August 28, 2012, both with 'Video' in the Media column and 'No Packet Lost;' comments with 'Delete' links. At the bottom left, there's a dropdown menu labeled 'Limit # of items: 10'.

Time	Area	Zone	Type	Status	Media	Comment	
2012-09-12 16:24:52	1	10	Requested	Done		No Packet Lost;	<a href="#">Delete</a>
2012-08-28 14:30:42			Requested	Done	<a href="#">Video</a>	No Packet Lost;	<a href="#">Delete</a>
2012-08-28 14:21:12			Requested	Done	<a href="#">Video</a>	No Packet Lost;	<a href="#">Delete</a>

- **Reload** : Click to refresh the page content
- **Limit # of Items:** Click the drop down menu on the page to select the numbers of captured events you want to display.

## 9.2. Reported Events

This page stores all triggered events by the control panel by recording the events' CID event code and report status.

The screenshot shows the Climax control panel interface. On the left is a navigation menu with items like Home, Panel, History Records, Event Log, Panel Setting, PIN Code, Captured Events, Reported Events (which is highlighted with a red box), Device History, Device Management, Network Setting, System Setting, and Logout. The main area is titled 'Reported Events' and contains a table with columns: Time, Area, Zone / User, Trigger / Restore, CID event, Message, Report Status, and Comment. The table lists numerous events from September 12, 2012, including triggers for tamper and supervision failure. At the bottom left of the table is a dropdown menu labeled 'Limit # of items: 20'.

Time	Area	Zone / User	Trigger / Restore	CID event	Message	Report Status	Comment
2012-09-12 15:09:37	1	6	Trigger	383	Tamper	Done	
2012-09-12 14:49:33	1	5	Trigger	383	Tamper	Done	
2012-09-12 14:49:27	1	5	Restore	383	Tamper Restore	Done	
2012-09-12 14:48:57	1	5	Trigger	383	Tamper	Done	
2012-09-12 14:48:56	1	5	Restore	383	Tamper Restore	Done	
2012-09-12 14:48:51	1	5	Trigger	383	Tamper	Done	
2012-09-12 14:48:49	1	5	Restore	383	Tamper Restore	Done	
2012-09-12 14:45:07	1	5	Trigger	383	Tamper	Done	
2012-09-12 14:45:05	1	5	Restore	383	Tamper Restore	Done	
2012-09-12 14:43:29	1	5	Trigger	383	Tamper	Done	
2012-09-12 14:43:27	1	5	Restore	383	Tamper Restore	Done	
2012-09-12 14:42:46	1	5	Trigger	383	Tamper	Done	
2012-09-12 04:04:16	1	1	Trigger	147	Supervision Failure	Done	
2012-09-12 04:04:16	1	3	Trigger	147	Supervision Failure	Done	
2012-09-12 04:04:15	1	2	Trigger	147	Supervision Failure	Done	
2012-09-11 16:35:18	0	0	Trigger	311	Panel Battery Missing/Dead	Done	
2012-09-11 16:04:16	0	0	Trigger	137	Panel Tamper	Done	
2012-09-11 10:40:58	0	0	Trigger	311	Panel Battery Missing/Dead	Done	
2012-09-11 10:16:07	0	0	Trigger	137	Panel Tamper	Done	
2012-08-28 19:18:02	1	1	Trigger	383	Tamper	Done	

- **Reload :** Click to refresh the page content
- **Limit # of Items:** Click the drop down menu on the page to select the numbers of captured events you want to display.

## 9.3. Event Log

The Event Log page records specific actions performed by the Control Panel and accessory devices.

Time	Area	Mode	Action	User	Source	Device Type	Message
2015/01/12 05:26:09			Switch To Standard Mode	Panel			Web
2015/01/12 05:25:35	1		Device Added	Zone4	IP Camera		Web
2015/01/12 05:25:04			Switch To Learn Mode	Panel			Web
2015/01/12 05:25:03			Switch To Standard Mode	Panel			Web
2015/01/12 05:23:49			Switch To Learn Mode	Panel			Web
2015/01/12 04:09:49			Switch To Standard Mode	Panel			Web
2015/01/12 04:08:20			System Fault	Panel			Area1Zone1 Tamper; Area1Zone3 Tamper
2015/01/12 04:08:20	1	Disarm	Device Tamper	Zone3	IR Camera		Trigger
2015/01/12 04:04:48			Switch To Learn Mode	Panel			Web
2015/01/12 04:04:45			Switch To Standard Mode	Panel			Web
2015/01/12 04:03:31	1		Device Added	Zone3	IR Camera		Web
2015/01/12 04:02:32	1		Device Added	Zone2	Dimmer		Web
2015/01/12 04:01:38			Switch To Learn Mode	Panel			Web
2015/01/12 03:41:13			System Fault	Panel			Area1Zone1 Tamper
2015/01/12 03:41:12	1	Disarm	Ignored	Zone1	Door Contact		Tamper Ignored
2015/01/12 03:41:12	1	Disarm	Device Tamper	Zone1	Door Contact		Trigger
			System Fault	Panel			Restore
			System Fault	Panel			Network Cable Unplugged; ZigBee Not Ready
			Initialize	Panel			Ready
2015/01/12 03:16:07			System Fault	Panel			Area1Zone1 Tamper

- **Reload :** Click to refresh the page content
- **Limit # of Items:** Click the drop down menu on the page to select the numbers of captured events you want to display.

## 9.4. Device History

You can track your device status history under **Device History**. For Power Switch Meter or Temperature Sensor, the update history power consumption or temperature reading will be displayed under this page (the current info is also displayed under **Panel** and **PSS Control**).

Date Time	Area	Zone	Name	Information	Value
2015-01-12 05:42:29	1	2		Energy	2.5kWh
2015-01-12 05:42:29	1	2		Active Power	0.0W
2015-01-12 05:32:29	1	2		Energy	2.5kWh
2015-01-12 05:32:29	1	2		Active Power	0.0W
2015-01-12 05:22:29	1	2		Energy	2.5kWh
2015-01-12 05:22:29	1	2		Active Power	0.0W
2015-01-12 05:12:29	1	2		Energy	2.5kWh
2015-01-12 05:12:29	1	2		Active Power	0.0W
2015-01-12 05:02:29	1	2		Energy	2.5kWh
2015-01-12 05:02:29	1	2		Active Power	0.0W
2015-01-12 04:52:29	1	2		Energy	2.5kWh
2015-01-12 04:52:29	1	2		Active Power	0.0W
2015-01-12 04:42:29	1	2		Energy	2.5kWh
2015-01-12 04:42:29	1	2		Active Power	0.0W
2015-01-12 04:32:29	1	2		Energy	2.5kWh
2015-01-12 04:32:29	1	2		Active Power	0.0W
2015-01-12 04:22:29	1	2		Energy	2.5kWh
2015-01-12 04:22:29	1	2		Active Power	0.0W
2015-01-12 04:12:29	1	2		Energy	2.5kWh
2015-01-12 04:12:29	1	2		Active Power	0.0W

- **Reload** : Click to refresh the page content
- **Limit # of Items:** Click the drop down menu on the page to select the numbers of captured events you want to display.

## 10. Appendix

### 10.1. Fault Event Description

During operation, when the panel detects faulty events, the panel will log the event and make reports. When fault events exist in the system, the panel Fault LED will light up and the panel will emit a beep every 30 seconds.

#### ● Fault Event Table

Fault Event	Descriptions
<b>Panel AC Failure</b>	The Control Panel's AC power is disconnected When AC failure is detected, the panel will turn off both Ethernet and mobile network functions when idle to conserve power. Ethernet and mobile network will be activated temporarily when an event is detected by the panel (i.e. alarm trigger) to send report, and will turn off again after finishing report. Accessing the panel via remote server XMPP connection is disabled during AC failure.
<b>Panel Low Battery</b>	The panel's backup battery is only used when AC failure is detected. When the backup battery voltage is low, the panel low battery event is generated
<b>Panel Tamper</b>	The tamper switch on back of the panel is not compressed against the back cover. This means the panel's cover is opened and not properly sealed.
<b>Battery Dead/Missing</b>	The panel cannot detect backup battery, this means the battery is either dysfunctional, or the battery switch is not slid to ON position.
<b>Interference/Jamming</b>	The panel detects radio frequency jamming, which will affect its ability to receive signal from RF devices (Does not include Shutter Control/Wi-fi signal)
<b>Device Low Battery</b>	The accessory device at indicated zone number is low on battery
<b>Device AC Failure</b>	The accessory device at indicated zone number does not have AC power connection.
<b>Device Tamper</b>	The tamper switch of the device at indicated zone number is open
<b>Device Supervision Failure</b>	The panel was unable to receive supervision signal sent from accessory device at indicated zone number for the duration of Supervision Timer programmed. (i.e. If Supervision Timer is set to 12 hours, the panel will generate supervision failure event after failing to receive supervision signal for 12 hours)

## 10.2. Control Panel Mode and Response Table

For Alarm Activation by Events and Control Panel Responses, please refer to the following table:

Attribute	System Mode / Status					
	Disarm	Full Arm	Home Arm	Under Exit Timer	Under Exit Timer (No Response)	Under Entry Timer
No Response	No Response	No Response	No Response	Instant Burglar Alarm	No Response	No Response
Start Entry Delay 1	Instant Burglar Alarm (Interior)	Start Entry 1 → Burglar Alarm (Perimeter)	Start Entry 1 → Burglar Alarm (Interior)	Instant Burglar Alarm	No Response	Delayed Burglar Alarm
Start Entry Delay 2	Instant Burglar Alarm (Interior)	Start Entry 2 → Burglar Alarm (Perimeter)	Start Entry 2 → Burglar Alarm (Interior)	Instant Burglar Alarm	No Response	Delayed Burglar Alarm
Chime	Door Chime	Door Chime	Door Chime	Instant Burglar Alarm	No Response	Door Chime
Burglar Follow	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	No Response	Delayed Burglar Alarm
Burglar Instant	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	No Response	Instant Burglar Alarm
Burglar Outdoor	Instant Burglar Outdoor Alarm	Instant Burglar Outdoor Alarm	Instant Burglar Outdoor Alarm	Instant Burglar Alarm	No Response	Instant Burglar Outdoor Alarm
Cross Zone	See 10.3. Appendix – Cross Zone Verification			Instant Burglar Alarm	No Response	Delayed Burglar Alarm
Set/Unset (Opening)	Full Arm	No Response	Full Arm	Full Arm	No Response	No Response
Set/Unset (Closing)	No Response	Disarm	Disarm	Disarm	Disarm	Disarm
24H – Burglar	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm	Instant Burglar Alarm
24H – Smoke	Instant Smoke	Instant Smoke	Instant Smoke	Instant Smoke	Instant Smoke	Instant Smoke

	Alarm	Alarm	Alarm	Alarm	Alarm	
24H – Medical	Instant Medical Alarm	Instant Medical Alarm	Instant Medical Alarm	Instant Medical Alarm	Instant Medical Alarm	Instant Medical Alarm
24H – Fire	Instant Fire Alarm	Instant Fire Alarm	Instant Fire Alarm	Instant Fire Alarm	Instant Fire Alarm	Instant Fire Alarm
24H – Water	Instant Water Alarm	Instant Water Alarm	Instant Water Alarm	Instant Water Alarm	Instant Water Alarm	Instant Water Alarm
24H – CO	Instant CO Alarm	Instant CO Alarm	Instant CO Alarm	Instant CO Alarm	Instant CO Alarm	Instant CO Alarm
24H – Gas	Instant Gas Alarm	Instant Gas Alarm	Instant Gas Alarm	Instant Gas Alarm	Instant Gas Alarm	Instant Gas Alarm

24H – Silent Panic	Instant Silent Panic Alarm	Instant Silent Panic Alarm	Instant Silent Panic Alarm	Instant Silent Panic Alarm	Instant Silent Panic Alarm	Instant Silent Panic Alarm
24H – Panic	Instant Panic Alarm	Instant Panic Alarm	Instant Panic Alarm	Instant Panic Alarm	Instant Panic Alarm	Instant Panic Alarm
24H – Emergency	Instant Emergency Alarm	Instant Emergency Alarm	Instant Emergency Alarm	Instant Emergency Alarm	Instant Emergency Alarm	Instant Emergency Alarm
24H – Emergency (Quiet)	Instant Silent Emergency Alarm	Instant Silent Emergency Alarm	Instant Silent Emergency Alarm	Instant Silent Emergency Alarm	Instant Silent Emergency Alarm	Instant Silent Emergency Alarm
24H – Fire with Verification	See <b>10.4. Appendix – Fire Verification</b>					
Trigger Scene	Trigger Scene Number	Trigger Scene Number	Trigger Scene Number	Trigger Scene Number	Trigger Scene Number	Trigger Scene Number

<NOTE>

- ☞ “Delayed Burglar Alarm” response means the Control Panel will wait for the Entry Time to expire. If the Entry Time expires without disarming the system, the Control Panel will activate a Burglar Alarm after Entry Time expiry.
- ☞ “Silent Panic Alarm”, “Silent Emergency Alarm” and “Burglar Outdoor Alarm” does not activate any audible alarm. The Control Panel will report the alarm event silently without any warning sound.

## 10.3. Cross Zone Verification

Cross Zone Verification is used to setup cross verification for intrusion sensors.

To use Cross Zone Verification, the following sensor and panel setting must be adjusted:

- 1 At least 1 intrusion sensor must be set to **Cross Zone** attribute.
- 2 The **Cross Zone Timer** option under Panel Setting webpage must be enabled.

### Cross Zone Verification Rule

- Cross Zone function does not activate under Exit and Entry Time.
- When a sensor set to Cross Zone attribute is triggered, the panel begins to sound alarm, counts down Cross Zone Timer and reports a Cross Zone First Trip event (CID 693).
  - If the Cross Zone Timer expires without any other sensor trigger, the panel reports Cross Zone Trouble event (CID 378) when the timer expires.
  - If the same sensor is triggered again during Cross Zone Timers, the Cross Zone Timer is reset and extended.
  - If another sensor is triggered during the timer:
    - ☞ The Panel report Burglar (CID 130) for both sensors.
    - ☞ If the newly triggered sensor is set to Cross Zone attribute, the Panel also report Burglar Verified (CID 139) for this sensor.
    - ☞ The Cross Zone Timer is reset and extended.
    - ☞ When the Cross Zone Timer expires, the panel reports Cross Zone Timeout (CID 694).

## 10.4. Fire Verification

Fire Verification is used to setup verification for Smoke Detector.

To use Fire Verification, the following sensor and panel setting must be adjusted:

- 1 At least 1 Smoke Detector must be set to **24 HR – Fire with Verification** attribute.
- 2 The **Fire Verification Timer** option under Panel Setting webpage must be enabled.

### Fire Verification Rule

- When a Smoke Detector set to Fire Verification attribute is triggered, the panel begins to sound alarm, counts down Fire Verification Timer and reports a Near Alarm event (CID 118).
  - Triggering any Smoke Detector with Fire Verification attribute (including the original Some Detector) during Fire Verification Timer will prompt panel to report Smoke Alarm event (CID 111), the timer will be reset and extended.
  - Triggering a regular Smoke Detector with Smoke attribute during the Fire Verification Timer will prompt panel to report Smoke Alarm event (CID 111), the timer will not be reset..
  - When the Fire Verification Timer expires, the panel reports Fire Verification Timeout event (CID 695).

## 10.5. Contact-ID Protocol & Format

Where	<b>ACCT MT QXYZ GG C<sub>1</sub>C<sub>2</sub>C<sub>3</sub></b>																				
ACCT	= 4 Digit Account number (0-9, B-F)																				
MT	= Message Type, 18H.																				
Q	= Event qualifier, which gives specific event information:																				
XYZ	= Event code (3 Hex digits 0-9, B-F)																				
GG	= Group, Partition number (00H), or Area Number - 00 = panel - 01= area 1.....xx= area xx																				
	= 1. For devices: zone																				
	<table border="1"> <tr> <td><b>C<sub>1</sub>C<sub>2</sub>C<sub>3</sub> = Zone number</b></td> </tr> <tr> <td>001, Zone 1</td> </tr> <tr> <td>002, Zone 2</td> </tr> <tr> <td>.....</td> </tr> <tr> <td>XXX Zone XXX</td> </tr> </table>	<b>C<sub>1</sub>C<sub>2</sub>C<sub>3</sub> = Zone number</b>	001, Zone 1	002, Zone 2	.....	XXX Zone XXX															
<b>C<sub>1</sub>C<sub>2</sub>C<sub>3</sub> = Zone number</b>																					
001, Zone 1																					
002, Zone 2																					
.....																					
XXX Zone XXX																					
	2. For Panel: code																				
C <sub>1</sub> C <sub>2</sub> C <sub>3</sub>	<table border="1"> <tr> <td><b>C<sub>1</sub>C<sub>2</sub>C<sub>3</sub> =</b></td> <td></td> </tr> <tr> <td>User PIN Code 1</td> <td>001</td> </tr> <tr> <td>User PIN Code 2</td> <td>002</td> </tr> <tr> <td>User PIN Code 3</td> <td>003</td> </tr> <tr> <td>User PIN Code 4</td> <td>004</td> </tr> <tr> <td>User PIN Code 5</td> <td>005</td> </tr> <tr> <td>User PIN Code 6</td> <td>006</td> </tr> <tr> <td>Temporary Code</td> <td>997</td> </tr> <tr> <td>Duress Code</td> <td>998</td> </tr> <tr> <td>000= Control Panel</td> <td></td> </tr> </table>	<b>C<sub>1</sub>C<sub>2</sub>C<sub>3</sub> =</b>		User PIN Code 1	001	User PIN Code 2	002	User PIN Code 3	003	User PIN Code 4	004	User PIN Code 5	005	User PIN Code 6	006	Temporary Code	997	Duress Code	998	000= Control Panel	
<b>C<sub>1</sub>C<sub>2</sub>C<sub>3</sub> =</b>																					
User PIN Code 1	001																				
User PIN Code 2	002																				
User PIN Code 3	003																				
User PIN Code 4	004

User PIN Code 6	006																				
Temporary Code	997																				
Duress Code	998																				
000= Control Panel																					

## 10.6. Event Code

- **100 – Medical**
  - ◆ When a device set to Medical attribute is triggered.
- **101 – Personal emergency**
  - ◆ When a device set to Personal Emergency attribute is triggered.
- **110 – Fire**
  - ◆ When a device set to Fire attribute is triggered.
- **111 – Smoke**
  - ◆ When the Smoke Detector (SD) set to Smoke Alarm is triggered.
  - ◆ When the Smoke Detector (SD) set to Fire Verification verifies an alarm during Fire Verification Time.
- **118 – Near Alarm**
  - ◆ When the Smoke Detector (SD) set to Fire Verification is triggered.
- **120 – Panic**
  - ◆ When a device set to Panic attribute is pressed.
- **121 – Duress**
  - ◆ When the Duress Code is entered to disarm or arm the system.
- **122 –Silent Panic**
  - ◆ When a device set to Silent Panic is pressed.
- **130 – Burglar**
  - ◆ Whenever a device set as Burglar Instant is triggered.
  - ◆ Whenever a device set as Burglar Instant is triggered under **Disarm**, **Full Arm** or **Home Arm** mode.
- **131 – Burglar Perimeter**
  - ◆ When a device set as **Entry** is triggered in Full Arm mode.
  - ◆ When a device set as **Burglar Follow** is triggered during Full Arm Entry Time and the system is not disarmed before entry time expiry.
- **132 – Burglar Interior**
  - ◆ When a device set at **Entry** is triggered in Home Arm mode.
  - ◆ When a device set as **Burglar Follow** is triggered during Home Arm Entry Time and the system is not disarmed before entry time expiry.
- **136 – Burglar Outdoor**
  - ◆ Whenever a device set at **Burglar Outdoor** is triggered.
- **137 – Panel Tamper/ Panel Tamper Restore**
  - ◆ When the panel's tamper protection is triggered.
  - ◆ When the panel's tamper function is restored.
- **139 – Burglar Verified.**
  - ◆ When a sensor set to Cross Zone attribute verifies an alarm.
- **144 IR Anti-mask**
  - ◆ When the IR sensor has been masked.

- **147 – Sensor Supervision Failure/ Sensor Supervision Restore**
  - ◆ When the panel fails to receive supervision signal from a device within preset supervision timer.
  - ◆ When the panel receives signal again from sensor that previously failed supervision.
- **154 – Water leakage**
  - ◆ When the Water Sensor connected to Door Contact set at **Water (@W)** is triggered.
- **158 – High Temperature Alarm**
  - ◆ When high temperature alarm is triggered.
- **159 – Low Temperature Alarm**
  - ◆ When low temperature alarm is triggered.
- **162 – CO Alarm**
- **170 – High Power Consumption**
  - ◆ When high power consumption alarm is triggered.
- **171 – High Humidity Alarm**
  - ◆ When high humidity alarm is triggered.
- **172 – Low Humidity Alarm**
  - ◆ When low humidity alarm is triggered.
- **301 – AC Failure/ AC Power Restore**
  - ◆ When the AC power fails for more than 10 sec.
  - ◆ Restore from AC power failure.
- **302 – Low battery/ Battery Normal**
  - ◆ When the battery voltage of the Panel is low.
  - ◆ When the panel battery restores voltage.
- **311 – Battery Disconnection/ Battery Reconnected**
- **312 – Short Circuit Detected / Power Output Restore**
  - ◆ When Panel detects short circuit and stops supplying power to output voltage terminals.
  - ◆ When the panel restores power for voltage output terminals.
- **344 – Interference/ Interference problem solved**
- **358 – Network Cable Unplugged**
  - ◆ When the Ethernet cable is disconnected.
- **374 – Force Arm**
  - ◆ When the system is armed with existing fault events
- **380 – Device AC Failure**
  - ◆ When an AC power device loses AC power connection.
- **383 – Sensor Tamper/ Sensor Tamper Restore**
  - ◆ When any sensor's tamper protection is triggered.
  - ◆ When the sensor's tamper function is restored.
- **384 – Sensor Low battery/ Sensor Battery Normal**
  - ◆ When a device detects low battery voltage.

- ◆ When a device's low battery condition is restored.
- **400 – Arm/Disarm (by Remote Controller)**
  - ◆ When the system is armed or disarmed by using the Remote Controller.
- **401 – Remote Arm/Disarm**
  - ◆ When the system is armed or disarmed by SMS message or web access
- **407 – Disarm/Away Arm/Home Arm by Remote Keypad**
- **408 – Set/Unset Arm/Disarm**
  - ◆ When the DC set at Set\Unset is triggered.
- **456 - Partial Arm**
  - ◆ When partially arm the system from Disarm to Home arm
- **570 – Device out of order/ Door Contact Not Closed**
  - ◆ When arm fault type is set as Direct Arm, any device is out of order after the preset exit delay time is reached
  - ◆ When arm fault type is set as Direct Arm, Door Contact is not closed after the preset exit delay time is reached.
- **602 – Periodic test report**
  - ◆ When the control panel makes periodic Check-in reporting.
- **616 – Call Request**
  - ◆ When the service call is activated by VST-809.
- **693 – Cross Zone First Trip**
  - ◆ When a sensor set to Cross Zone is triggered to start Cross Zone Timers.
- **694 – Cross Zone Timeout**
  - ◆ When Cross Zone Timer expires after the alarm has been verified.
- **695 – Fire Verification Timeout**
  - ◆ When Fire Verification Timer expires.
